Little Bluestem in the Landscape

Heidi Kratsch, Extension Ornamental Horticulture Specialist *Graham Hunter*, Research Associate, Center for Water Efficient Landscaping

Schizachyrium scoparium Little Bluestem

Description: Perennial, warm season bunchgrass; blue-green foliage turning bronze in the fall. Flowers in mid to late summer; heads are tufted racemes. Plants can reach heights of up to 4 feet. This plant can be found naturally in desert surroundings, along waterways, and in rock crevices. This is a long-living plant that can be used ornamentally as a specimen, in a rock garden, or anywhere soil stabilization is desired. In winter, the seeds are favored by small birds.

Cultural Requirements:

- Native habitat
- Soil
- Cold Tolerance
- Drought Tolerance
- Salt Tolerance
- Sun/Shade Preference
- Transplanting
- Propagation
- Maintenance
- Pest Problems

native all over the U.S. to prairies, dry hills, woodlands well drained, low fertility, pH 5.0-8.4 hardy to -38°F high not tolerant full sun easy seed or division crop to no less than 8 inches in early fall or late spring no serious pest problems

Landscape Value:

 Use in the 	specimen, soil stabilization, wildlife
Landscape	protection and food source

- Foliage showy, attractive fall color
- Inflorescence fine-textured

		Apr		May		June		July	Aug	Sept	Oct	
•	Color											
•	Fruit (seedheads)	feathery appearance when mature										
•	Form	upright, tight, vertical lines										
•	Texture	fine to medium										
•	Ultimate Size	3 to 4 feet										
•	Rate of Growth	Moderate; full height in 2 years										
•	Plant Community	parkland, pinyon-juniper, cool-desert shrub										
•	Availability	"Utah's Choice" selection										

Cultivars
 'Blaze': compact; intense pink-orange fall color; 'The Blues': intense blue leaf color
