Stillwater, Oklahoma 74078-6013

**ABSTRACT:** Following a comprehensive review of their forestry curriculum in 1995, the Oklahoma State University Forestry Faculty elected to modify the way professional ethics are formally addressed. The modifications involve three courses. An introduction of ethics and their role in natural resource management is presented to freshman in an introductory course. This provides a framework for learning and applying the science and practices of the Forestry Profession in the context of an ethical philosophy. Students address ethics a second time between their sophomore and junior years. This happens during the initial summer camp course where students are exposed to philosophical and policy differences between natural resource management agencies. Ethics are formally reintroduced in two senior courses that are usually taken concurrently. One of these courses is a capstone experience where students address real natural resource management problems. The second is a course in forest administration and natural resource policy. In these two courses the instructors cooperate to require the students to consider professional ethics in a philosophical framework for decision making as well as an applied standard for real decisions in the execution of professional work. This is accomplished through discussions of the Ethical Canons of the Society of American Foresters in the forest administration and policy course. These discussions are followed by group presentations to the class of ethical considerations associated with projects from the student's capstone experience.

Lincoln University, Jefferson City, MO 65101, USA.

**ABSTRACT:** Makerere University's Biological Field Station (MUBFS), located in western Uganda's Kibale National Park, offers excellent research and training opportunities in the physical, biological, and social sciences. This region of East Africa has exceptional natural and cultural resources, and is home to seven national parks and numerous protected areas. The Station can accommodate researchers and trainees year-round, and offers a wide range of facilities and services, including lodging, meals, laundry, phone, fax, e-mail, a library, and limited transportation and computer access. MUBFS is easily accessible, has a strong 25-year research record, and an extensive forest trail system. Uganda's stable democratic system, English language, and favorable climate make the Station an ideal site for research and training. For more information contact the MUBFS Homepage on the World Wide Web at <http://www.usu.edu/~mubfs/index.html>.
