2 “Proposed Effective Term” refers to term when change to program is published. For Suspensions and Discontinuations, “effective term” refers to the term the program will suspend admissions.
Section I: The Request

Utah State University requests approval to restructure Experimental and Applied Psychological Science specialization into four new specializations: Behavior Analysis, Brain and Cognition, Quantitative Psychology, and Sociobehavioral Epidemiology effective Fall 2017. This action was approved by the institutional Board of Trustees on .

Section II: Program Proposal

Program Change Description/Rationale

Present a brief program change description. Describe the institutional procedures used to arrive at a decision for the change. Briefly indicate why such a change should be initiated. State how the institution and the USHE benefit by the change.

There are two main reasons for this change. One, the name “Experimental and Applied Psychological Science” is too broad. The current specialization is already informally organized into four distinct emphasis areas with different groups of faculty providing specialized training in each area. The broad name of the current specialization fails to convey the specific training in these emphasis areas and negatively impacts student recruitment as a result. Two, these diverse areas of focus make it challenging to address all the training needs within one specialization. Thus, there is a need to create four specializations to both better recruit students and better reflect the specialized training students receive.

Consistency with Institutional Mission/Institutional Impact

Explain how the action is consistent with the institution’s Regent-approved mission, roles, and goals. Institutional mission and roles may be found at higheredutah.org/policies/policyr312/. Indicate if the program will be delivered outside of designated service area; provide justification. Service areas are defined in higheredutah.org/policies/policyr315/ . Will faculty or staff structures be impacted by the proposed change?

The proposed change will not impact current administrative structures. Enrollment in the Psychology PhD program is expected to be positively impacted. It is likely that more applications will be received due to the increased specificity of the restructured specializations. Faculty within these proposed specializations have capacity to take additional doctoral students so it is likely that enrollments will increase slightly. The restructure of the existing specialization will not require changes to current faculty and staff appointments. No new physical facilities or modification to existing facilities will be required.

Current students (n= 30) in the Experimental and Applied Psychological Science specialization will be allowed to continue in this specialization or switch to one of the new specializations. Once all students currently in the Experimental and Applied Psychological Science specialization have graduated or switched specializations, this specialization will be dropped.

Finances

What costs or savings are anticipated from this change? If new funds are required to implement the change, indicate expected sources of funds. Describe any budgetary impact on other programs or units within the institution.

No new funding is required to make this change. While the number of students admitted under these new specializations may increase, there is capacity for additional students and the increase in student would be modest (e.g., 3-5 new students per year).
