ASSOCIATE EDITORS NEEDED

To better serve our growing community of Human-Wildlife Interactions readers, human-wildlife conflict management practitioners, and the wildlife management profession, HWI editors are currently recruiting associate editors. We welcome professionals specializing in the many aspects of human-wildlife interactions, including: human dimensions, wildlife management, wildlife damage management, wildlife ecology, wildlife toxicology, wildlife diseases, public education and outreach, public communication and engagement, and predation management.

Associate editors are asked to serve a 3-year term. Associate editors would typically be asked to process 3–4 manuscripts annually. This process includes reviewing comments and recommendations received from peer reviews and making a recommendation to the editor-in-chief regarding publication status.

For more information or to express interest, please contact the HWI office at hwi@usu.edu. In the email, please include a recent CV or resume and a brief description of your professional interests, topic areas, or specializations.
