The faculty has granted the request for the use of undergraduates to do away with the 100 yard augmented last spring at their asking, whereby students were simply informed that they were passing or failing.

The new system has steadily improved the Oberlin students had better know what those

UP FROM THE OXCART

"Acceleration, rather than structural changes, is the key to an understanding of our recent economic developments," from the report of President Hoover's Committee on Recent Economic Changes.

YESTERDAY, the rumble, creak, and plod of cart and oxen. Today and to-morrow the room of airplanes. Faster production. Faster consumption. Faster communication.

Significant of electricity's part in the modern speeding-up process is the fact that during the last seven years, consumption of electric power increased three and one-half times as fast as population.

General Electric and its subsidiaries have developed and built much of the larger apparatus that generates this power as well as the apparatus which utilizes it in industry and in the home.

The college-trained men who come every year to General Electric take a responsible part in the planning, production, and distribution of electric products, and at the same time receive further technical or business training.
