

# Improving Utah's Water Quality

## Scofield Reservoir Watershed

Revised November 2012

### MAJOR WATERBODIES

Scofield Reservoir  
Mud Creek  
Fish Creek  
Pondtown Creek

### MAJOR CITIES

Scofield  
Price

### MAJOR LAND USES

Livestock grazing  
Wildlife  
Coal Mining  
Recreation  
Residential

### LOCAL WATER QUALITY ISSUES

Phosphorus  
Sediment

### LOCAL CONTACT:

### Watershed Description:

Scofield Reservoir is located in Carbon County, Utah, at an elevation of 7,618 feet. The reservoir was constructed at the confluence of several perennial streams including Fish Creek, Mud Creek (locally referred to as Clear Creek), Pondtown Creek, and other springs and small tributaries. The reservoir's outlet feeds into the Price River, a tributary of the Green River 70 miles to the southwest.

The Scofield Reservoir watershed encompasses approximately 1,259,000 acres. The majority of the watershed is within Carbon County with small portions crossing into Utah County to the north and Sanpete County to the west.

Scofield Reservoir holds 73,600 acre feet of water for flood control, recreation, irrigation, and drinking water storage.

Scofield Reservoir was listed on the State of Utah's 303d list as partially not supporting its designated beneficial use as a cold-water fishery because of low dissolved oxygen and high total phosphorous concentrations. Nutrients, originating primarily from natural sources, are delivered to the reservoir directly during spring runoff, summer draw down, summer storm events, and through tributary flows. The high nutrient levels cause excessive algal growth and turbidity in the reservoir. The high biological productivity results in lower oxygen concentrations. This stresses the aquatic community, and several winter fish kills have been reported within the reservoir.

The high nutrient levels cause excessive algal growth and turbidity in the reservoir. The high biological productivity results in lower oxygen concentrations. This stresses the aquatic community, and several winter fish kills have been reported within the reservoir.

A TMDL was developed for Scofield Reservoir in 2000. Implementation strategies identified within the TMDL include stream restoration and elimination of grazing below the high water line. Other strategies discussed include recreational developments and solid waste disposal.

# Scofield Reservoir Water Quality Improvement

## Project Description:

In 2005, the Scofield Watershed Council implemented several projects and determined that the Solid Waste Transfer Station (dumpster facility) on the southeast shore of the lake and the Information Sign on the northeast shore of the lake would be the primary projects to complete. Carbon County provided the designs for both projects. Construction began in October 2005. Concrete for the footings and walls on the dumpster site were poured. Cement ramps were later installed to allow users better access to the dumpster sites. Backfill was completed on the 29<sup>th</sup> of May 2006, signaling project completion. In 2010, Carbon County installed a second dumpster enclosure on the north side of the reservoir.

Another area of concern in the watershed was the Spur Bay region. Heavy grazing by cattle in the Spur Bay region of Scofield Reservoir was identified as a cause of nutrient loading and erosion. The local property owner, rancher, and the watershed coordinator in the Provo NRCS office, developed a grazing plan. It was agreed that the cows would be in the area for 2 weeks in the early summer then moved out until another 2 week grazing period in October. The local rancher was very willing to help make improvements at Spur Bay, but still wanted to graze in the area. With this arrangement, the grass was able to maintain healthy growth and seed distribution. In just a few months the Spur Bay area had regained vigor.

An outreach project has also been implemented in the Scofield Reservoir Watershed. Small, credit card sized, informational refrigerator magnets were produced. Initially, 200 magnets were created for distribution around Scofield, at the reservoir, local store, Carbon County Courthouse, and Scofield State Park Service. The magnets were so popular and well received that an additional 500 were ordered. Further distribution occurred at the annual Carbon County Fair.

## Partners

Carbon County  
Carbon County Planning and Zoning Department  
Carbon County Road Department  
Castle County Travel  
Environmental Protection Agency  
Price River Water Improvement District  
San Rafael Soil Conservation District  
Natural Resources Conservation Service  
Scofield City  
Scofield State Park  
Skyline Coordinated Weed Management Area Committee  
Utah Association of Conservation Districts  
Utah Department of Agriculture and Food  
Utah Department of Transportation
