ASI Framework Implementation

PHASE 1

CMMC Maturity Certification

The CMMC encompasses cybersecurity maturity levels that range from “Basic Cybersecurity Hygiene” to “Advanced/Progressive”. It is a mandated certification used by the federal acquisition process to grade the cybersecurity posture of participating organizations.

PHASE 2

Cyber Hygiene

Cyber Hygiene represents the actions of the processes, people, and technologies put in place to conduct day to day security tasks. Outcomes from performance of cyber hygiene, in the form of metrics, will be used to help generate the ASI.

PHASE 3

Incident Response

Incident Response relies on how well an organization is postured for and has prepared for an adverse event. How well an organization detects, contains, and recovers from an adverse incident is captured in this phase.

ASI SCORE

STEP BY STEP

- CMMC Third Party Audit & Certification
- Quarterly reporting of Phase 1 performance metrics
- Quarterly reporting of Phase 2 performance metrics
- Calculation of ASI Score
- Continued performance metric input
- Calculation of ASI Score
