How to make e-learning courses in curricula of natural resources management more sustainable?

- why e-Learning?
- sustainable courses
- a new partnership
- outlook

Siegfried Lewark
“... the Internet may be the means of realizing a forestry lecturer’s dream. Imagine being able to discuss, for example, different timber harvesting systems used internationally with a group of motivated students from different regions of the globe in one virtual classroom.”

(Längin, Ackerman & Lewark, 2004)
Make e-learning courses more sustainable

potential of e-learning

learning: any time, any place, any pace

teaching: sharing resources, low cost

University: creates income

BUT: sobering after euphoria
Make e-learning courses more sustainable

think of a Master student or a PhD researcher in your university

interested in

- grassland ecology
- land use rights in the tropics
- ethics
- forest inheritance patterns in the Nordic countries
- NFTP use
- gender studies
Make e-learning courses more sustainable
	his student may find

- experts somewhere in the world
- publications, internet information
- specialized courses
- but very often no means of going there for personal contact or participation
Make e-learning courses more sustainable

the experts / teachers may find

- few students in their own universities
- little chance for their courses in curricula
- courses not counted for workload
- little encouragement
this calls for distance learning solutions!

but it is not only about „exotic courses“, it may also fit for specialized courses which are well established somewhere, and later also for „standard“ courses?
Make e-learning courses more sustainable

how could a sustainable course offer look like?

- relevant and attractive topic
- anchoring in curriculum
- accessible & recognised from outside
- good didactical approach
Gender roles in environmental management (internet course)

Dates: February till June 2008       Credits: 5 ECTS credits

Learning/teaching will be organised interactively using an internet based e-learning platform. Learner orientation, learning methods: literature search and evaluation, assignments, biographical interviews – communication tools: e-mail, fora, chats. We will offer – in a sense of blended learning – a face-to-face phase at the beginning (details to be announced to accepted participants) at the universities of Freiburg and Joensuu (obligatory for participants from those universities).

Teaching staff: Prof. Dr. Siegfried Lewark, Dr. Marion Karmann

Level: The course will be open for graduate and PhD-students. Details to be agreed upon during the starting phase.
### Course elements and requirements

</tr>
</tbody>
</table>

### Requirements

- participation in at least 6 chats (or extra chats)
- all assignments (Joensuu group only ass 1 to 4)
- at least 2 interviews
- self presentation

### Grading base

- concluding task (essay)
- one interview, selected by participant
a new attempt to give some support

Make e-learning courses more sustainable

IPFE is launching a marketplace for distance (E-learning) courses in forestry

Today’s forestry graduates face increasingly complex working environments. Graduates need to be equipped to deal with emerging paradigms of global dimensions such as integrated ecosystem management, landscape restoration, deforestation, forest governance, forest biodiversity, forest and climate change, to name a few. Most universities do not have the teaching resources to offer all of this.

This knowledge, and required expertise, could be made available to students in any location through the use of information and communication technologies such as E-learning. E-learning can provide independent virtual learning environments tailored to the needs of customers anywhere in the world. Considerable effort and money has already gone into the development of E-learning courses in forestry, but unfortunately sustainable examples are few. In many cases E-learning opportunities were not well promoted or were not easily accessible and supply did not meet demand.

1. Oregon State University

NEW: Master of Natural Resources (MNR) Graduate Degree – Online

Beginning in academic year 2010-2011

Overview: This 45-credit online master’s degree program is designed to bring together university scientists and world-wide natural resource professionals to address natural resource challenges at the state, regional, national, and international levels. The curriculum combines multiple disciplines to develop competency in integrating specialized resource knowledge across multiple scientific fields. Students will integrate knowledge of the interaction of ecological, economic, ethical, production, and social systems to find solutions to complex natural resource issues.

For more information, please contact Dr. Badege Bishaw Badege.Bishaw@oregonstate.edu

Sustainable Natural Resources Graduate Certificate – Online

Overview: This 18-credit online certificate is designed for all students, especially company, industry or agency employees who desire training in solving complex sustainability problems. The curriculum is structured to address natural resource management issues anywhere in the world, therefore expanding its educational value beyond Oregon’s ecosystems.

How to make e-learning courses in curricula of natural resources management more sustainable?

• why e-Learning?
• sustainable courses
• a new partnership
• outlook

Siegfried Lewark
Make e-learning courses more sustainable
Make e-learning courses more sustainable

Open Education Resources (OER)

- Great idea
- Great e.g. for African students
- But then – who pays?
- Worth more consideration
Make e-learning courses more sustainable

How to?

teacher can do it easily, little input

learner oriented

open resource learning platform

use the freedom you have
Make e-learning courses more sustainable

what could be done?

- hold courses together
- develop and offer special courses
- make courses accessible & recognized
- inform & encourage students
Some concluding remarks

- e-learning can enrich MSc programmes
- rather elective courses
- providing time slots advisable
- students should be encouraged
Make e-learning courses more sustainable

more concluding remarks

- recognition should be facilitated
- learner oriented methods important
- open learning resources explored
- WELAN may help in future
