NOTICE TO
FLOOD INSURANCE STUDY USERS

Communities participating in the National Flood Insurance Program have established repositories of flood hazard data for floodplain management and flood insurance purposes. This Flood Insurance Study may not contain all data available within the repository. It is advisable to contact the community repository for any additional data.

Part or all of this Flood Insurance Study may be revised and republished at any time. In addition, part of this Flood Insurance Study may be revised by the Letter of Map Revision process, which does not involve republication or redistribution of the Flood Insurance Study. It is, therefore, the responsibility of the user to consult with community officials and to check the community repository to obtain the most current Flood Insurance Study components.
TABLE OF CONTENTS

Volume I

1.0 INTRODUCTION ........................................................................................................... 1
   1.1 Purpose of Study ........................................................................................................ 1
   1.2 Authority and Acknowledgments ........................................................................... 1
   1.3 Coordination ............................................................................................................. 2

2.0 AREA STUDIED .......................................................................................................... 5
   2.1 Scope of Study .......................................................................................................... 5
   2.2 Community Description ......................................................................................... 8
   2.3 Principal Flood Problems ...................................................................................... 17
   2.4 Flood Protection Measures ................................................................................... 22

3.0 ENGINEERING METHODS ....................................................................................... 26
   3.1 Hydrologic Analyses .............................................................................................. 26
   3.2 Hydraulic Analyses ................................................................................................ 31

4.0 FLOODPLAIN MANAGEMENT APPLICATIONS ....................................................... 40
   4.1 Floodplain Boundaries ......................................................................................... 40
   4.2 Floodways .............................................................................................................. 43

5.0 INSURANCE APPLICATION ..................................................................................... 78

6.0 FLOOD INSURANCE RATE MAP ............................................................................ 79

7.0 OTHER STUDIES ..................................................................................................... 79

8.0 LOCATION OF DATA ................................................................................................ 83

9.0 BIBLIOGRAPHY AND REFERENCES ..................................................................... 83

10.0 REVISION DESCRIPTIONS .................................................................................... 92
   10.1 First Revision .......................................................................................................... 92

TABLES

Table 1 - Historic Consultation Coordination Officer Meeting Dates ....................... 3
Table 2 - Streams Studied by Detailed Methods ...................................................... 7
Table 3 - Streams Studied by Approximate Methods ............................................... 9
Table 4 - Letters of Map Change .............................................................................. 11
Table 5 - Population Estimates .................................................................................. 12
Table 6 - Historic Flood Data ..................................................................................... 18
Table 7 - Stream Gauging Stations ............................................................................ 28
Table 8 - Summary of Discharges ............................................................................ 32
Table 9 - Manning's 'n' Values .................................................................................. 37
Table 10 - Topographic Mapping of Streams Studied by Detailed Methods .......... 42
Table 11 - Floodway Data .......................................................................................... 44
Table 12 - Community Map History ......................................................................... 80
Table 13 - Jordan River Proposed Design Discharges ............................................. 82
Table 14 - Range of Manning's 'n' Values ................................................................. 94

EXHIBITS

Exhibit 1 - Flood Profiles
   Big Cottonwood Creek Panels 01P - 35P
   Bingham Creek Panels 36P - 41P
   Barr Fork Panels 42P - 43P
   Corner Canyon Creek Panels 44P - 51P
   Dry Creek Panels 52P - 70P
   Emigration Creek Panels 71P - 112P
   Jordan River Panels Not Printed

Volume III

Little Cottonwood Creek Panels 139P - 158P
   Panels Not Printed Panels 159P - 160P
   Mill Creek Panels 161P - 165P
   Parleys Creek Panels 166P - 187P(h)
   Red Butte Creek Panels 188P - 197P
   Willow Creek (East) Panels 198P - 205P
   Willow Creek (West) Panels 206P - 210 P
   Midas Creek Panels 211P - 214P
