Draft Special Resource Study and Environmental Assessment

United States Department of Interior National Park Service
draft
special resource study
environmental assessment
In the early morning of January 29, 1863, Col. Patrick Edward Connor and the Third California Volunteers of the United States Army attacked a village of Shoshone people spending the winter at Bear River. Most of the 21 soldiers who died received their mortal wounds during the first half hour of the conflict. By noon, somewhere between 240 and 300 Shoshone men, women, and children lay dead on the massacre field.
Americans ought to know what acts of violence bought them their right to own land, build homes, use resources and travel freely in North America. Americans ought to know what happened on the ground they stand on.

Patricia N. Limerick

Shoshoni people lived in western mountains and deserts long before Lewis and Clark met them in Idaho in 1805. This mountain Shoshoni family preserved its old way of life in Idaho near the continental divide (Idaho Historical Society Picture Series Number 3) .......... 115
VISION STATEMENT

The Bear River massacre site should be a place that is protected from any development that would harm its significant historical and sacred qualities. The site should commemorate not only the soldiers that participated in the massacre, but also acknowledge the lives of the Shoshone people that were lost on its soil. It should be a place where visitors can learn the various viewpoints of what happened, as well as the historical and social context of the times, and the consequences of its occurrence. It should be a place that retains its rural character without unduly affecting the lives of people who now own and use the land.

The vision stated above was developed by the National Park Service component of the team that prepared this study. It was prepared after a series of meetings with a Focus Group (the larger planning team), landowners and Shoshone tribes. It articulates the desired future for the Bear River massacre site, and establishes standards by which four management alternatives can be measured. The success of any given alternative will depend directly on the degree to which it achieves the goals stated in vision statement. The desired futures that were used to develop the vision statement are detailed in a later section of this study.
INTRODUCTION

SUMMARY

One of the responsibilities of the National Park Service is to identify nationally significant natural, cultural, and recreational resources and assist in their preservation both inside and outside the national park system. The areas managed by the National Park Service are only one part of a national inventory of special and protected areas managed by innumerable federal, state, and local agencies and the private sector. Consequently, addition to the national park system is only one of many alternatives for ensuring the preservation of significant national resources for public enjoyment and benefit. As such, the purpose of this study is to provide the United States Congress with a professional analysis of whether the nationally significant resources of the Bear River massacre site are suitable and feasible to be added to the national park system.

In addition, this special resource study presents four alternatives for the future protection, interpretation and management of the Bear River massacre site. The study also describes a no action alternative in order to provide a basis of comparison with the other alternatives.

The Bear River massacre site lies a little over six kilometers (four miles) north of Preston, Idaho, in the southeast corner of the state, the county seat of Franklin County. Today, an existing road-side monument erected by the Daughters of the Utah Pioneers and an interpretive sign placed by Idaho Department of Transportation near the site commemorate the massacre by emphasizing the roles of the nineteenth century settlers and the military. The surrounding 1691 acres are designated a national historic landmark. With the exception of a highway right-of-way, all land is privately owned.

Alternative 1 provides for the creation of a County Historic Site operated by local government, and calls for minimum actions to achieve a portion of the desired futures expressed by the public. It would provide for local protection of resources, interpretation of the massacre with a more balanced story of what happened the day of the massacre, and provide some suggested guidelines to local government to protect the scenic qualities of a cultural landscape. Most current private landowner use would be preserved by minimizing visitor access to the site and providing the majority of interpretation in the town of Preston. This alternative could also be used as a transitional stage towards implementation of any of the other proposals. The Idaho state historic preservation officer and state parks and recreation department would provide leadership in resource protection and all administration would occur at the local level. Some National Park Service technical assistance could be provided for planning and interpretation of the site, as requested.
Alternative 2 creates a State Historic Site, which more fully incorporates the visions of most of the interested groups. The alternative provides for combined state and landowner protection of resources and the cultural landscape while preserving most private landowner use. Landowners would relinquish use of the land on a voluntary basis and would be compensated through the state acquisition of scenic or conservation easements. The study area is defined by the cultural landscape as seen from an eastern overlook. It interprets the massacre on-site with a balanced presentation of what happened the day of the massacre and provides a more detailed contextual story at a visitor center overlooking the massacre site. A Shoshone memorial would commemorate the Shoshone dead. In order to assure that all interested groups have a voice in the future of the State Historic Site, it would be managed by a heritage commission composed of representatives from each of several interested entities. The specific roles of each entity would be defined in a management guideline. The state would assume overall leadership in resource protection and site management. The National Park Service could provide technical assistance in planning and interpreting the site, as requested.

Alternative 3 creates a National Historic Reserve that places greater emphasis on the national significance of the site by extending federal protection to the significant cultural resources. The study area is defined by the cultural landscape as seen from a western overlook. The massacre field is interpreted with a balanced presentation of the events of the day of the massacre, with the contextual story presented at a visitor center located on an overlook. This alternative also provides for commemoration of the Shoshone who died during the massacre with a monument on or near the massacre field, and a cultural center at the visitor center. Provisions maximize visitor experience within constraints placed by landowners, but still preserves most landowner use. Management is provided by the National Park Service in cooperation with a citizen advisory commission, with whom NPS acts cooperatively.

Alternative 4 proposes a traditional National Park Service area with NPS ownership of the massacre field and a cultural landscape protection area defined by the views from all overlooks within the landmarks boundaries. Called a National Historic Site, it maximizes the protection of resources by placing the massacre field within federal ownership. The alternative maximizes the visitor experience by telling the individual stories of the day of the massacre in the places where they occurred. This experience is enhanced by recreating, to the extent possible, the landscape at the time of the massacre, and by providing a trail system that circles the massacre field. A balanced contextual story is told at an overlook that best fits design and interpretive needs. This alternative also provides for commemoration of the Shoshone who died during the massacre with a monument on or near the massacre field, and a cultural center near the visitor center. Most of the current landowners would retain existing use of their land within guidelines established by the

Introduction

National Park Service. NPS management would be enhanced through strong cooperative agreements with Shoshone tribes and landowners.

BACKGROUND OF THE STUDY

Only recently has the significance of this massacre become known outside the realm of a few academic circles and the Shoshone oral tradition. As knowledge of its importance in the history of the west becomes better known, visitation to the site is expected to increase, and with it the necessity to protect the historic resources, and to interpret the massacre accurately, while respecting ways of life of people now using the land.

In 1916, a committee comprised of descendants of pioneer settlers in the Cache Valley was organized to commemorate the massacre event, then known as the Battle of Bear River. This effort was primarily intended to honor the California Volunteers. In 1932, the committee succeeded in erecting a monument through the efforts of the Franklin County Chapter of the Daughters of the Utah Pioneers, the Cache Valley Council, the Boy Scouts of America, and the Utah Pioneer Trails and Landmarks Association. The Daughters of the Utah Pioneers rededicated the monument in 1953 to also commemorate the role of pioneer women in caring for the wounded soldiers and five of the Shoshone survivors.

In the mid-1980s, the Bear River-Battle Creek Monument Association was formed by people in the Cache River Valley interested in further commemorating the Bear River massacre. Their emphasis has primarily been to increase recognition of the national significance of the event. Through their efforts, the Idaho and Utah state legislatures passed a joint resolution calling for the creation of a “Battle of Bear River Monument” in 1986.

Many Shoshone people had long objected to the characterization of the conflict as a battle, to the emphasis in the commemoration of settlers and soldiers, and the portrayal of the Shoshone victims as “hostiles.” Upon passage of the joint resolution, Mae Timbimboo Parry, a Shoshone descendent of one of the survivors of the massacre, threatened to file
legislation. Partially to resolve this dispute, and partially to begin honoring the request of the Utah and Idaho state legislatures, Idaho Senator James McClure asked the National Park Service to undertake a national historic landmark study.

In 1990, Edwin C. Bearss, then Chief Historian of the National Park Service, completed that study, recognizing the event as a massacre and officially renaming the event as the Bear River Massacre. The National Park Service Advisory Board concurred with his conclusion that the site represented a nationally significant event in the history of the United States, resulting in the Secretary of Interior’s designation of the Bear River massacre site as a national historic landmark in 1990.

The national historic landmark (NHL) study was the first step taken by the National Park Service in response to the joint resolution by the Utah and Idaho state legislatures. It has been followed by the preparation of this special resource study, which evaluates the suitability and feasibility of creating a new unit of the national park system, and outlines a variety of methods for protecting, interpreting and managing the site.

PURPOSE AND NEED OF THE STUDY

The United States Congress has directed the National Park Service to study natural, historic and recreation areas to determine whether they are nationally significant, and if so, whether they have the potential for inclusion in the national park system (16 USC 1a-5). For that reason, and in response to the joint resolutions of the states of Idaho and Utah, NPS has undertaken this special resource study.

Therefore, the purpose of this study is to provide information to Congress on the significance of the Bear River massacre site to American history and on the suitability and feasibility of designating the site as a unit of the national park system. This study further outlines four alternative strategies for the protection, interpretation, management of the site and weighs the impacts and benefits of each alternative. The study outlines two alternatives under which the site could become part of the national park system, as well as two methods for protection and management of the site that involve local governments assisted by the service’s expertise in interpretation and resource management.

After public review of this draft study, a final study will provide Congress with information about the quality and condition of the resources and their relationship to the criteria for parklands applied by the National Park Service. Recommendations to Congress regarding implementation of the ideas and alternatives in this type of study are usually forwarded by the National Park Service to the Secretary of the Interior. After additional review within the Executive Branch, the secretary’s recommendations will then be forwarded to Congress.

CRITERIA FOR PARKLANDS

National Park Service Management Policies (NPS-2, 1988) outline the criteria by which areas are evaluated for inclusion in the national park system, and stipulate:

- To be eligible for favorable consideration as a unit of the national park system, an area must (1) possess nationally significant natural, cultural, or recreational resources, (2) be a suitable and feasible addition to the system, and (3) require direct NPS management instead of alternative protection by other agencies or the private sector. These criteria are designed to ensure that the national park system includes only outstanding examples of the nation’s natural, cultural, and recreational resources. They recognize that inclusion in the national park system is not the only option for preserving the nation’s outstanding resources (NPS-2, 1988: 2:2-3).

The National Park Service’s criteria for parklands were applied throughout this study to determine whether the Bear River massacre site qualified for inclusion as a unit of the National Park Service. The site has been evaluated according to those criteria as follows.

SIGNIFICANCE

The Bear River massacre site has been designated a national historic landmark because it possesses exceptional value in illustrating or interpreting the history of the United States. As the scene of the largest single massacre of American Indians in the western United States, it has been identified with a broad pattern of United States history (see the full text of the landmark nomination form in Appendix A).

- The event was the first of several conflicts between the United States Army and American Indians in the late nineteenth century that ended as massacres. Even the lowest estimates of the Shoshone dead at Bear River exceed the number of people killed at later massacres, such as at Sand Creek, Colorado (103 Cheyenne, Washita, Oklahoma (150 Cheyenne), Marias River, Montana (173 Piegan Blackfeet), and Wounded Knee, South Dakota (at least 146 Lakota Sioux).

- Military historians cite the Bear River event as the first time that the U.S. Army deliberately attacked a winter village at a time of year when American Indians were known to gather together, instead of drawing the warriors out to another location to do battle. The cold weather assisted the army’s undetected approach and hindered the escape of wounded people.

- The massacre eventually led to the creation of several reservations in the region, opening prime agricultural land to settlement by
farmers and mineral wealth to miners.

The massacre and its aftermath permanently changed the way of life for Shoshone and other American Indian peoples in Idaho, Nevada, Wyoming, and Utah.

Under the 1988 NPS Management Policies and Criteria for Parklands, the Bear River massacre site meets the following criteria for significance:

- It is an outstanding example of a site where the conflict between American Indians and the U.S. Army resulted in the massacre of an entire village of Indian people.
- It possesses exceptional value in illustrating or interpreting the cultural themes of our nation's heritage -- in this case, the conflict between peoples.
- It offers superlative opportunities for public education and historic research.
- It retains a high degree of integrity as a true, accurate, and relatively unspoiled example of the resource. This degree of integrity was stated in the national historic landmark nomination, and there have been no substantive changes to the landscape since 1990 to change that integrity.

SUITABILITY

To be considered suitable for inclusion in the national park system, a historic site must represent a cultural theme that is not already well represented within the park system or is not preserved and interpreted by some other land-managing agency. Adequacy of representation is determined by comparing the proposed addition to other units in the national park system. In that comparison, the service considers differences or similarities in the character, quality, quantity, or combination of resources and opportunities for public use.

Under the draft thematic framework developed by the National Park Service in 1995, the Bear River massacre site represents the theme "Peopling Places," and the topic "Encounters, Conflicts and Colonization." Eighty-four units of the national park system currently have resources that represent this thematic topic, but most are related to prehistoric conflict or encounters that took place during the colonial period of North American history.

Fifteen units interpret American Indian and U.S. Army conflict in the second half of the nineteenth century, as shown in Table 1. Of those, the story of that conflict is incidental to the primary purpose of the park in seven units. Of the remaining eight units, six are military forts, with an interpretive emphasis on army life, the function of the military on the "Indian frontier," and in the protection of immigrants and traders. Only two units actively interpret hostile encounters between U.S. Army and American Indians. At Little Bighorn Battlefield National Monument, the principal story is that of the defeat of Lt. Col. George Armstrong Custer's troops by an unprecedented alliance of northern plains Indians, and the attempt of those tribes to protect their way of life. At Nez Perce National Historical Park, seven of the 38 units of the park are designated to interpret skirmishes between the Nez Perce people and the U.S. Army.

</tbody>
</table>
Of particular importance to the
consideration of suitability is the fact that,
despite being a critical part of our nation’s
history, no site of the massacre of
American Indians is currently represented
by a unit of the national park system. In
the national historic landmark nomination
of the Bear River massacre site completed
by the National Park Service in 1990, four
other massacres of American Indians by
the army were listed. As shown in Table 2,
all sites receive only minimal
interpretation, and all but one are in private
or tribal ownership.

The Sand Creek massacre site in Kiowa
County, Colorado, is clearly marked on
most state maps and is relatively easy to
find over 13 kilometers (eight miles) of
dirt roads. However, the exact location of
the site is in question, as participants in the
conflict did not return for several decades,
and the landscape has changed somewhat.
Although the site of the massacre is
probably on one individual parcel of
privately-owned land, as many as four
different locations, and therefore four
separate owners, may possess the massacre
site. The site that is acknowledged as the
most likely is marked with a small stone
monument the size of a gravestone, erected
in 1950. There is no orientation to the site.
A sign 13 kilometers (eight miles) away,
on the nearest paved highway, interprets
the massacre. The site has not been listed
in either the National or the Colorado State
Register of Historic Places.

* None of the estimates of people killed in these massacres are absolute numbers. For the purposes of comparison, the
lowest estimates have been used in every case.

**Table 2: American Indian Massacre Sites and Their Current Ownership.**

The massacre at Washita River, Oklahoma, is still known as the “Battle of
the Washita.” It is all within private
ownership, mostly by one land-owner. The
state has an easement at an overlook that
interprets the site. It was designated a
national historic landmark on October 15, 1966. The National Park Service completed
a new area study of the site in 1970. In
1994, the Service prepared a revised
boundary map and a new statement of
significance for congressional hearings to
reconsider inclusion in the national park
system. Congress has not yet acted on the
recommendation.

The massacre of about 170 Piegan
Blackfeet at the Marias River in Montana
is often referred to as “The Baker
Massacre” after the lieutenant that led the
army troops. Like the Sand Creek massacre
site, that of the Marias River is not well
documented. One possible site is owned by
the Bureau of Reclamation (BOR), but
others lie within private ownership. The
site is not listed in the National Register of
Historic Places, nor is it interpreted.
Blackfeet people currently hold yearly
ceremonies at the BOR site, and have
obtained a grant to do archeological
surveys of it, but no other public
recognition of the event exists.

The site of the massacre at Wounded
Knee, South Dakota, is on the Oglala
Sioux reservation of Pine Ridge, and so is
held in public trust for the members of that
tribe. It was designated a national historic
landmark on October 15, 1966. A 1993
Study of Alternatives completed by the
National Park Service outlined two
alternatives that would make the site a unit
of the national park system and a third that
would create an NPS-affiliated tribal park
operated jointly by the Oglala and Lakota
Sioux tribes. The study is now being
considered by the United States Congress.

On the basis of this analysis, it has been
determined that the Bear River massacre
site meets the NPS criteria for suitability.
The site offers an excellent opportunity to
tell the story of the conflict between
American Indians and the United States
Army in a single, well-defined location that
is easily accessible to travelers. This
themetic topic is not well represented by
other units of the national park system, and
very little interpretation of the topic has
been undertaken by other local, state,
tribal, or federal land managing agencies.

All Americans, both Indian and non-Indian,
should be given the opportunity to learn
about this uncomfortable aspect of the
nation’s history -- the massacres of whole
villages of American Indians. The
knowledge of the violence that bought all
Americans the right to own land, build
homes, use resources, and travel freely
throughout the country will increase their
understanding and appreciation for those
rights. At the very least, the price the
Shoshone paid should be acknowledged.

**FEASIBILITY**

To be feasible as a new unit of the national
park system, an area must be of sufficient
size and appropriate configuration,
considering historic settings, to ensure
long-term protection of resources and to
accommodate public use. It also must have
potential for efficient administration at a reasonable cost. Important feasibility factors include landownership, acquisition costs, access, threats to the resource and staff or development requirements.

It is important to note that interest in the creation of a park unit to commemorate the massacre site originated with grass-roots organizations at the local level. It was on the strength of local interest that both the states of Idaho and Utah passed resolutions requesting Congress designate the Bear River massacre site as a "national monument."

The principal difference between this study of alternatives and those of other similar sites in recent years is the recognition that very little land needs to be removed from private ownership and private control. In all alternatives, every effort has been made to ensure that the rights, privileges, and privacy of landowners and residents would be respected, and that, in most cases, their current use of the land would continue. Implementation of any of the alternatives would depend upon landowner and resident cooperation. The acquisition of any land, whether in fee simple or through easements, would be strictly on a willing seller/willing buyer basis.

A detailed discussion of the feasibility of each alternative, especially cost considerations, will be dealt with separately in the discussions of the impacts. In summary, the Bear River massacre site meets the feasibility criteria as a potential new unit of the national park system in both Alternatives 3 and 4 in the following ways:

- a boundary can be drawn of sufficient size and appropriate configuration to ensure the long-term preservation of resources and to accommodate public use;
- there is a potential for efficient administration at a reasonable cost;
- private ownership of land within the proposed boundaries can be accommodated while still realizing resource protection and visitor use goals;
- acquisition costs can be kept to a minimum due to a heavy reliance on development rights, and scenic and conservation easements to achieve resource protection and visitor use goals;
- access to the site is easily accomplished along existing roads and highways, and can be facilitated by the acquisition of easements;
- threats to the resources are minimal and can be ameliorated by the proposals in the alternatives (these threats are discussed in more detail later).

The feasibility issue of cost is summarized as follows.

**Facility Development Costs**

Approximate cost estimates for facility development include buildings, infrastructure, interpretative media, road construction, and other physical improvements that would be necessary to implement each of the four alternatives listed in the study. All alternatives promote public/private partnerships in one form or another. Therefore, cost sharing between all levels of government, with support from the private sector, is anticipated to support the capital improvements that would be required to implement each alternative.

Governmental funding emphasis would be at the local level for Alternative A, at the local, state, and tribal level for Alternative B, and at the state, tribal, and federal level for Alternatives C and D. Private sector support would be assumed for each alternative. Total estimated costs for facility development are:

- **Alternative 1:** $1.3 to 1.5 million
- **Alternative 2:** $7.3 to 9.3 million
- **Alternative 3:** $9.5 to 12.0 million
- **Alternative 4:** $12.3 to 14.9 million

**Land Acquisition Costs**

A Legislative Cost Estimate for land acquisition will be developed during 1996 for each alternative presented in the study. These cost estimates will be provided to the Secretary of the Interior for his submission to Congress to accompany the this study.

Only minimal easement acquisition costs would be expected for Alternative 1, since this alternative places heavy reliance upon county land use planning and local ordinances to protect resources. Some land acquisition costs would be incurred by the state of Idaho under Alternative 2, and would likely involve very limited fee title acquisition and some conservation easement purchases, coupled with complementary county land use planning and ordinances. Alternative 3 would involve costs to the federal government for both fee title and conservation easement purchases, coupled with complementary county land use planning and ordinances. The same types of acquisition would be expected for Alternative 4, with some higher cost expected in Alternative 4 due to additional fee title purchases within the core resource area.

The general land values in the area reflect farming and ranching uses, and any land acquisition costs would be expected to be commensurate with those land values. As stipulated throughout this study, any land acquired by public entities would be recommended only when a willing seller situation exists.
THE MASSACRE AT BEAR RIVER

Until the middle of the nineteenth century, the Shoshone* were a people who moved throughout a large territory from northern Idaho to southern Utah, and from western Wyoming to central Nevada. Their livelihood depended upon the rich grasslands that provided wild grains for themselves and their horses. They tended to band together under the leadership of a single person who was adept at making decisions about where to find scarce resources or how to wage war, depending on the needs of the times. The size of the bands varied also depending on needs: small groups were favored where resources were widely scattered and not numerous; larger groups were needed in times of plenty or when warfare was the only way to procure food and clothing. Band membership was fluid, with each family deciding who they wanted to follow and how many people they thought they should live with in order to meet their own needs. By 1860, about 450 Shoshone people following the leaders Bear Hunter and Sagwitch were using the resources of the Cache Valley, a broad plain bounded by the South Hills of Utah, and the Wasatch, Malad, Bannock, Portneuf, and Bear River ranges of Idaho.

Beginning in the 1840s, settlers associated with the Church of Latter Day Saints (LDS), fleeing religious persecution, came to the Great Salt Lake. As they moved north towards the Cache Valley, they began to plow the Shoshone grasslands, turning them into rich agricultural fields. As their grasslands disappeared, the Shoshone came more and more to depend upon these settlers for flour and beef to replace their wild seeds and game. Living as neighbors to the Shoshone, the settlers bought an uneasy peace with periodic contributions of grain and beef.

In the 1850s, word of good agricultural land in Oregon stimulated a mass migration of other Euroamerican settlers to the far west. These emigrants, as transient people with concerns about having enough supplies to complete their journeys, were not always willing to share their food and livestock with the increasingly hungry Shoshone along the trail. Misunderstandings in motives occurred the part of both groups of people. Based on exaggerated reports of dangers from American Indians, emigrants sometimes fired at the starving (or occasionally simply curious) people

---

*The word *Shoshone* is spelled two ways throughout this document. *Shoshone* is used to denote all speakers of a Numic language within the Shoshonean language family who shared widely spread cultural characteristics and extensive interaction both before and after the advent of the reservation system. This spelling is preferred by most Shoshone people. *Shosho ni* is an alternative spelling adopted by the Northwest Band of Shoshoni Nation, a federally recognized tribe, many of whose ancestors were at Bear River in January, 1863. In this document, the latter spelling refers only to members of the Northwest Band. The origin of the word is uncertain, and does not appear to have been used by Shoshone speakers to refer to themselves. It is always pronounced with three syllables.
We have fed them [the Shoshone and other Indian tribes] thousands and thousands of dollars in wheat, beef, flour, vegetables, & c. & c., not through fear but through a sense of humanity, realizing that they look upon the very lands we occupy as a portion of their inheritance, bequeathed to them by their forefathers, consequently our policy has thus far secured to us, through the blessing of God, that peace which enabled our boys to roam over these mountains and canyons, and our women to travel from place to placed unmolested (Peter Maughan, Bishop of the Church of Latter Day Saints, 1869).

whose lands they were passing through. These misunderstandings often led to unfortunate conflicts, and sometimes death for Shoshones, settlers, and emigrants alike.

At the same time, gold fever ran rampant throughout the west. The men who searched for placer gold invaded the Rocky Mountains in the 1850s, hoping to find the next bonanza, make their fortune, and return to the families they left at home. In keeping the peace in lands they crossed on the way to the next El Dorado, these highly mobile individuals often had even less motivation than the emigrants did.

Knowing they would be in Indian territory only a few hours or days, and having little fear of reprisals, these men rarely shared their extremely limited supplies with the residents of the high plateaus. By 1862 a steady trickle of miners had established the Montana Trail from Salt Lake City to the Beaverhead strikes of Montana Territory. This trail followed an earlier Shoshone trail, at least in part, and crossed the Bear River north of the northernmost Latter Day Saints settlement of Franklin, near a favored winter camp of Bear Hunter’s band of Shoshone.

With the California gold rush in 1848, communications between the two coasts of the country became more important than ever before. Most mail was carried on the Overland Stage, which ran from St. Louis, Missouri to Sacramento, California through Salt Lake City. Feeding the horses required to run the stage line seriously depleted grazing lands used by Shoshones, Utes, and Paiutes all along the route. Hostilities between Shoshone and Overland employees increased the tension, often interrupting mail service.

Then, in 1861, South Carolina seceded from the United States, throwing the country into civil war. Miners, merchants and tradesmen in California heard the call to arms. In September of that year, the Third California Volunteer Infantry was formed in Stockton, California, to fight on the side of the Union army. Col. Patrick Edward Connor, a veteran of the Mexican War, became their commander. These volunteers joined the army for the express purpose of fighting in the Civil War. It was with disappointment that they learned they were being assigned to guard the Overland mail route instead. They were sent to replace the United States troops at Camp Floyd, south of Salt Lake City, who had already gone east. To keep the vital communication link between California and the people waging war in the east, the California Volunteers were charged with ensuring peace along the Overland route.

Every Indian captured in this district during the present war [the Civil War] who has been engaged in hostilities against whites, present or absent, will be hanged on the spot. women and children in all cases being spared. Part of the General Order by the Department of the Pacific, April 7, 1862, given to Colonel Connor when instructed to ensure the peace on the Overland mail route.

In early September, 1862 reports of a blond-haired, blue-eyed boy living with Bear Hunter’s Shoshone band began to circulate among the settlers. Although Bear Hunter vowed that the child was the son of a French trapper and the sister of another band’s chief, Oregon emigrant Zachias Van Orman became convinced the boy was his nephew, who had been captured by Shoshone on the Oregon Trail in 1860. Van Orman petitioned Colonel Connor to retrieve the boy. Negotiations to turn the child over to Connor’s forces deteriorated, and four Shoshone men were killed.

By January, 1863, this incident along with many seemingly disparate events on a regional and national scale -- the settlement of Utah by the Church of Latter Day Saints, the displacement of Shoshone from their traditional gathering and hunting lands, the emigration of settlers to Oregon, the finding of gold in Montana, and the Civil War -- coalesced to point the way of history towards the event on Bear River.

For the Shoshone, January was a time when bands gathered together to visit relatives and to engage in traditional ceremonies, including a celebration called the warm dance. The Cache Valley Shoshone favored a location near where the Shoshone trail crossed the Bear River, largely because hot springs along the river warmed the ground and provided good winter forage for their horses.

That winter the bands following Bear Hunter and Sagwitch pitched their lodges among the thickly growing willows that grew between the two- to four-meter (six to twelve feet) high banks of Battle Creek, then known as Beaver Creek. As was the custom with the Shoshone, many lodges were supported by a framework of living willows tied together at the top. The surrounding thickets and stream banks offered additional protection from the fiercely cold wind that could sweep down the river in winter.

On January 5, ten gold miners following the Montana Trail were killed by Shoshones, purportedly in retribution for the deaths of four Shoshones in the Van Orman incident. The next day John Henry Smith was killed as Shoshones attempted to drive off the stock of another mining party. A Salt Lake City judge issued a warrant for the arrest of Bear Hunter and two other Shoshone band leaders,
Introduction

Washakie and Sanpitch, on the presumption that they were to be held accountable for the actions of individuals within their bands.

In the meantime, Colonel Connor had decided to take matters into his own hands. On January 21, he ordered 70 infantry troops north with supplies and ammunition, purportedly to protect wagon trains hauling grain south from the Cache Valley. Three days later, 220 cavalry were dispatched to march at night. They overtook the infantry and supplies on January 27.

The troops left Franklin, 29 kilometers (18 miles) south of the Bear River crossing, at 3:00 am on January 29. McGarry's cavalry looked down on the village at 6:00 am. The troops saw an estimated 75 lodges in the encampment, and immediately mistook the thick willow patches and steep creek banks as intentionally constructed military fortifications, structures that Shoshone people had never been known to build. McGarry's horsemen descended to ford the river almost immediately, before an alarm could be sounded and the Shoshone could escape.

Accounts differ as to which side fired first, but gunfire broke out as he attempted to place his troops around the right flank of the village, according to the plan earlier conceived by Colonel Connor. When the infantry arrived a short time later, the river was too deep to cross on foot, so some of the cavalry ferried the foot soldiers, all getting wet in the bitterly cold morning. Most of the 21 army casualties occurred during the first half hour, as the Shoshone were entrenched within the banks of the creek and somewhat protected by thick willows.

Once McGarry got his cavalry into position, and the infantry in place on the
west side of the river, the advantage offered by the stream banks and willows to the Shoshones was lost. The massacre began in earnest and lasted until about 10:00 in the morning.

Reports of the Shoshone dead vary widely, no two observers offering the same figures. Some drowned trying to escape in the river, and others may have died later of their wounds. Colonel Connor counted 240 dead, but admitted to leaving the field before he had finished the count. Some observers estimated as many as 500 dead. Brigham Madsen, a noted Utah historian and author of a study of the Bear River massacre, has systematically reviewed available estimates and suggests that somewhere between 250 and 275 people were killed. Estimates of survivors are more consistent in reports. Connor reported that about 160 women and children were "taken prisoner" for the night of the massacre, then released with a limited amount of food and other supplies. Shoshone reports suggest about 20 men escaped. These figures roughly account for the 450 people who inhabited the 75 lodges reported in the village.

The action at Bear River brought the California Volunteers and Colonel Connor in particular very little criticism and great praise. Two months after the massacre, Connor was promoted specifically for his actions at Bear River. He went on to advise Col. John Chivington, who commanded the First and Third Colorado Volunteers at the massacre of Cheyenne people on Sand Creek, two years later.

The massacre at Bear River did not completely end hostilities between the American Indians of the region and the settlers, emigrants and miners. However, the fact that the army could punish an entire village of people for the crimes of a few persuaded Indian leaders that they could not hope to obtain justice except on the terms of the Indian agents. In the months and years immediately following the massacre, a series of treaties with many bands of Shoshones, Paiutes and Utes were negotiated. Of some significance is the fact that Brig. Gen. P. Edward Connor was a signatory to five treaties with these groups in 1863 alone. Reservations were created by these treaties, but in certain cases, such as with the Fort Hall Reservation, Executive orders further defined reservation boundaries.

At the beginning of the reservation period, as had always been the case, there was a great deal of geographical mobility by the bands, groups, and "tribes" who interacted in many ways. Not all individuals were represented in the negotiations, and not all individuals chose to settle on the established reservations. Many Shoshone people living in what later became Idaho agreed to settle on the Shoshone-Bannock Reservation at Fort Hall in the late 1860s and early 1870s, but others stayed on their traditional lands of southeast Idaho and northern Utah.

While the series of treaties and agreements in 1863 left the Cache Valley as Shoshone country, the second treaty of Fort Bridger in 1868 ceded the valley to the government of the United States. Individuals today still contest the authority of Shoshone signatories to cede those lands, but they did in fact pass into private ownership after 1868.

After the massacre, the people left from Bear Hunter's and Sagwitch's bands dispersed among other Shoshone bands, some settling on the reservations established under treaty, and others living amongst the LDS pioneers and attempting to acquire legal title to land through homestead laws. Unfortunately, unbeknownst to most, American Indians were ineligible to homestead land because they were not regarded as United States citizens until 1924.

A number of these survivors and descendants settled in an area known as Washakie, on land held in title by the LDS church. Many of them became members of the church, farmed the land, and lived on it in much the same way as their LDS neighbors. By the 1960s, the LDS church gave this group of Shoshone 186 acres of land in Utah. This land was rolled into tribal trust in 1986.

The Northwestern Band of Shoshoni Nation is a group of people largely descended from survivors and near relatives of survivors of the massacre at Bear River, and are comprised of people who did not choose to settle on the Fort Hall, Wind River or Duck Valley reservations. While they had been recognized as a tribal group as early as 1971 in an adjudication under the Indian Claims Adjustment Commission Act, the tribe did not receive federal recognition from the Department of the Interior until 1980.

Today, most of the Shoshone descendants of survivors of the massacre are members of four federally recognized tribes: the Northwestern Band of Shoshoni Nation, the Shoshone-Bannock Tribes of the Fort Hall Reservation, the Shoshone-Paiute Tribes of Duck Valley, and the Shoshone Tribe of the Wind River Reservation. Other relatives may be present on a number of reservations of the Shoshone and Paiutes in Nevada. The preponderance of descendants are members of the Northwestern Band and live in northern Utah and southern Idaho, away from their reservation.
CULTURAL RESOURCES

Cultural resources consist of historic sites, properties and other aspects of the human environment that have special value to the nation’s cultural heritage. At the Bear River massacre site, there are a number of site locations that have historical and cultural significance. In addition, the cultural landscape and the story of the massacre are considered resources worthy of special recognition.

Historic Sites

The Bear River Battleground was listed in the National Register of Historic Places on March 14, 1973. The secretary of the interior designated the Bear River Massacre Site National Historic Landmark on June 21, 1990. At the present time, all cultural resources that are recognized to be of national significance are enumerated in the NHL nomination form. They include:

- most of the site of the Shoshone encampment;
- the escarpment south of Bear River where the California Volunteers reconnoitered the village preparatory to attacking (called the Soldier’s Overlook in this study);
- the ford where the soldiers crossed the river;
- the Battle Creek ravine and hollow;
- the area where Major McGarry’s battalion initially engaged the Shoshone and where most of the soldiers’ casualties were incurred;
- the ground where Colonel Connor brought up and deployed reinforcements;
- the massacre field where the Shoshones sought to escape;
- and the Daughters of the Utah Pioneers monument.

The Massacre Field

The massacre field has special cultural significance for the Shoshone, who regard it as a sacred burial ground. Historic accounts suggest that the bodies of slain Shoshone were left unburied where they fell. As many as five years after the massacre, a journalist reported seeing human remains laying on the field. During the 1910 construction of an irrigation canal through the field, human remains were reported. In 1911, a combined flood and landslide covered much of the area, effectively sealing any remains that could have been affected by later plowing, irrigation, or minor surface disturbance of the massacre field.

There may well be other ethnographic resources in the vicinity of the massacre site that have a relationship to the massacre event, or which may need special protection. No one has systematically
inventoryed the sites, structures, objects, landscapes, or natural resource features in the vicinity that have traditional legendary, religious, subsistence, or other significance in the Shoshone cultural system. Without knowledge of their existence, landowners or proposed land managers are not able to protect these resources.

The Oral Tradition

Another resource of importance associated with the Bear River massacre site is the story itself. It has already been preserved in historic accounts and archives, but that source of information consists almost entirely of military records, newspaper accounts of the period, eye-witness accounts of settlers and soldiers. These records do not adequately portray the Shoshone perspectives of the massacre. Many Shoshone families have passed personal family histories of the massacre from grandparent to grandchild, but very few of these stories have been recorded. This oral tradition is widely recognized as an important source of historical information in danger of being lost. No concerted efforts are currently being made to collect and record the Shoshone versions of what happened.

The preservation of the stories from the viewpoints of all participants in the massacre is an important purpose of all alternatives presented here. Improving the way the story is preserved, interpreted and disseminated to the public is one of the goals of this special resource study, regardless of how the site is ultimately managed. Under the auspices of the national register listing and the national historic landmark program, which is the only source of protection currently offered, there is no special provision for the protection of the story or for its transmission to future generations.

Archeological Resources

The confluence of Battle Creek and Bear River was the location of a succession of winter camps for hundreds, perhaps thousands of years. Archeological remains of those encampments contribute to an understanding of why the massacre took place at that particular location.

There appear to be no visible archeological remains in the plowed fields near the heart of the massacre site. Private collectors may have removed any surface remains through the years, although it is likely that a few remains would surface in a plowed field after every rain storm if they were there. The lack of artifacts suggests that the 1863 slide and/or flood may have buried the remains of the 1863 encampment and all previous ones, and that they are below the plow zone. If so, they are relatively well protected against all but deliberate excavation.

There is only one archeological site in the National Register of Historic Places in Franklin County: the Weston Canyon Rockshelter, located about 32 kilometers (20 miles) to the west of Preston. Well stratified archeological deposits at that site indicate that people have lived in the area for at least 8000 years. Excavations of that site have yielded most of the information on the prehistory of southeastern Idaho that currently exists. A cave site near Franklin, Idaho may have had comparably significant deposits, but it was excavated by an avocational archeologist who, in a written report on his findings, regretted that he did not have the skills or scientific techniques to interpret his findings in the context of the prehistory of the area.

Only two other archeological sites have been recorded in Franklin County. Both are very small lithic scatters with only limited potential to yield important information about prehistory.

There have been no systematic archeological surveys of Franklin County, so it is difficult to determine just how many or few resources are in the area. Given the current knowledge of the historic use of the area by Shoshone people, it is likely that there are a great many significant archeological sites in the vicinity.

The Cultural Landscape

The study area is in a semi-arid, rural agricultural and ranching region. The main topographic features in the central part of the study area are the northeast to southwest trending Bear River floodplain and the Battle Creek drainage that flows into Bear River from the northwest. Both sides of the floodplain are bounded by steep bluffs.

At the time of the massacre, dryland grasses and sage brush covered the terrace above the river. Junipers dotted the western bluffs. The river floodplain consisted of native grasses, and willow shrubs crowded the banks of the river and the floodplain of Battle Creek. These shrubs were so thick that Colonel Connor reported the Shoshone had "constructed" impenetrable breastworks along the creek edge. The Shoshone used the thickets of willows for protection from winter storms, and as building materials for their lodges.

Only limited evidence of this original landscape remains. The river has meandered south and east of its original course. The impenetrable willow thickets have been replaced by airier Russian olives and open fields. The changed river course and the construction of a state highway has caused Battle Creek to run farther south than it did originally. Slumping of nearby bluffs and the flooding of Battle Creek has changed the character of the creek bed so that the site visitor may have some difficulty imagining how the vegetation affected the sequence of events during the massacre without interpretive aids.

The Bear River lowland within the NHL boundaries currently contains irrigated farmland, 12 buildings, the West Cache Irrigation Canal, and several roads. U.S. highway 91 runs north to south through the study area. The terrace on the west side of Bear River contains a large power line running north to south. Outside the boundaries of the national historic landmark, but still within its viewed lie the Bear River-Portneuf Ranges to the east and the Bannock Range to the west. The various buildings, irrigation canal, power lines, roads, irrigated fields, and fences built to support residents in the area have influenced the visual character of the study area to a minor extent and do not
contribute to the national significance of the resources associated with the massacre.

Despite the changed use of the landscape, the overall land forms remain the same. With minimal orientation, the site visitor can see the Battle Creek drainage, Cedar Bluff, over which a few Shoshone escaped, the Soldiers’ Overlook, from which Connor’s troops descended, and the general area of the massacre field. Especially when viewed from one of the surrounding bluffs, the agricultural land and modern developments do not detract from the visitor’s understanding of the sequence of events.

In fact, the agricultural landscape is the legacy of the massacre. The removal of Shoshone from their traditional homeland eventually led to the settlement of the upper Cache Valley by people making a living by farming. The highway is the modern descendant of the Shoshone Trail, Montana Trail and later railroad lines that passed through the area. The features of the modern landscape can be traced directly back to what happened at this place in January, 1863.

Three of the four alternatives presented in this study retain the landscape as it now appears. The fourth provides a means by which portions of the site could be returned to its appearance at the time of the massacre.

Intangible Cultural Resources

It is important to understand that the Bear River massacre has a special meaning to Shoshone people above and beyond the tangible piece of land that contains physical resources. The site symbolizes much of their history as a people, is a crucial element of their identity, and defines their relationships with non-Indians. The event and the site that symbolizes it have far deeper and more complicated associations to Shoshones than to any non-Indian. To the descendants of the people who were at Bear River on January 29, 1863, this piece of land embodies much of what it means to be a Shoshone.

NATURAL ENVIRONMENT

Regional Setting

Cache Valley, a north to south trending elongate basin in southeastern Idaho and northeastern Utah, lies in the Great Basin Physiographic Province. The valley is approximately 24 kilometers (15 miles) long and 40 kilometers (25 miles) wide and covers an area of 364 square kilometers (350 square miles). Mountain ranges bound the valley on all sides, with the South Hills on the south, the Wasatch, Malad and Bannock ranges on the southwest, west and northwest respectively, the Portneuf Range on the north and the Bear River Range on the east. These mountains rise from the valley floor to elevations of about 2697 meters (8850 feet). Alluvial fans, river terraces, and ancient delta deposits flank the mountain fronts and slope gently toward the center of the Cache Valley. The centrally located Bear River drains the valley toward the south.

Geology

Cache Valley was formed about 20 million years ago when faults down-dropped land in what is now Cache Valley and uplifted the surrounding areas. These faults are present in the subsurface beneath valley fill deposits. The subsurface faults act as conduits that bring hot water from deep within the earth. Water from the subsurface forms natural hot springs along Bear River, such as Battle Creek (Wayland) Hot Springs and Squaw (Sagwitch) Hot Springs. Wells have been drilled in the area to try to tap this source of geothermal energy.

The main force shaping the surface geology of Cache Valley during the last 600,000 years has been the presence of Lake Bonneville. An embayment in Lake Bonneville covered most of Cache Valley. Delta deposits derived from this ancient lake cover much of the valley floor and the lake’s shoreline features are evident along the valley’s perimeter. Surface deposits in Cache Valley are made of these deltaic sediments and consist of sands, shales and clays. About 13,500 years ago, a natural dam at Red Rocks Pass (northwest of the Bear River study area) failed, draining much of the water from Lake Bonneville. Today, all that remains of this ancient lake is the Great Salt Lake. Since the withdrawal of Lake Bonneville, Bear River has eroded about 34 meters (100 feet) into these deltaic deposits. The central part of the valley contains deltaic deposits and other sediments reworked and deposited after Lake Bonneville withdrew from the area.

Geologic hazards exist in the sediments along the terraces adjacent to Bear River. Slumping and landslides have occurred in the unconsolidated deltaic deposits, usually during periods of high precipitation. Water tends to concentrate in the coarser grained delta deposits. As hydraulic pressure builds up, the deposits slip along the finer-grained clay layers. The meandering of the river has also destabilized the slopes and caused slumping. Landslides can be identified by their hummocky appearance and can be seen throughout the Bear River study area.

Since the early 1900s, irrigation of the lands above Bear River has increased the frequency of landslides. Slides and slumping have occurred many times since the massacre, diverting Bear River and possibly burying parts of the massacre site. One such landslide occurred in 1911, which destroyed the irrigation canal that had been built a short time before, and filled in some swampy land near the confluence of the creek with the river. Another landslide required rerouting a portion of U.S. highway 91 north of Preston in 1993. Buildings and roads can be safely constructed on these deposits, but must be designed appropriately and situated back from the edges of the bluffs to reduce the threat of these geologic hazards.

Biological Resources

Cold, snowy winters and hot, dry summers characterize the climate at the Bear River massacre site. The average annual rainfall ranges from 12 to 16 inches. Native species, including basin big sagebrush, Utah juniper, rabbitbrush, antelope bitterbrush, and grasses comprise the
There was a lot of snow and slush and it made an awful lot of water that came roaring down. The flood washed the West Cache Canal that extended across the creek and carried the dirt down below. Anyway, that big swamp [south of the Winn home] got covered up -- it made a pretty good farm for Will Carter. A description of the 1911 flood in a 1980 interview with Herber Winn, whose grandfather was the first settler on the Bear River massacre field. He did not witness the flood but was in Preston at the time (Hart 1982:182).
candidate species, may also occur in the area. Two other candidate species, the white-faced ibis and black tern, occur northwest of the study area in the northwest portion of the Oxford Slough National Wildlife Refuge. These seven species are also protected by the state. Neither the Idaho Department of Fish and Game nor the U.S. Fish and Wildlife Service have identified federal or state-listed plant species in the study area.

Air and Water Resources

The visual quality of air in the west-central United States, including southern Idaho, is generally the best of anywhere in the country (Sisler, et al. 1993). Air quality near the massacre site is very good due to the low population density and lack of large emission sources near the study area. The massacre site is within a class II area, an air quality designation used to control air pollution under the Clean Air Act.

Surface water quality of Bear River and Battle Creek is influenced by non-point runoff from agricultural fields, as well as water diverted from Bear Lake where concentrations of dissolved solids are very high. Most water components tested in the Bear River have been within state water quality criteria for designated uses.

Groundwater comes from both cold and thermal sources. Cold groundwater is used for drinking water and typically has high concentrations of dissolved minerals. Water from several geothermal wells in the area have temperatures ranging from 43.9°C (111°F) to 110.7°C (231°F) and is highly mineralized. Geothermal wells are typically used for recreation or heating. Battle Creek (Wayland) and Squaw (Sagwitch) hot springs, with temperatures ranging from 72.8°C (163°F) to 83.9°C (183°F), have the hottest natural spring water in Cache Valley.

The Battle Creek (Wayland) Hot Spring consists of one large pool about 6 meters (20 feet) in diameter, a smaller pool, numerous vents, and seeps. The vents are marked by gas bubbles in the river bed. This spring system is located on the western edge of Bear River a little over a kilometer (3/4 mile) downstream from the confluence of Battle Creek. These waters have been used for recreation within the last century.

Squaw (Sagwitch) Hot Springs are located about one kilometer (0.6 mile) south of Battle Creek (Wayland) Hot Springs near the confluence of Deep Creek and Bear River. This system consists of one well, four other vents, and several seeps. Discharge from the well is forming a small travertine mound. The well and springs vent minor amounts of gas. These springs were formerly used for recreation and heating (Mitchell 1976).

The base floodplain, which was mapped by the Federal Emergency Management Agency, covers low-lying areas along the Bear River. Flood hazards along the Bear River are minimal because of the diversion through Bear Lake, the Oneida Narrows Dam, and irrigation diversion of moderate flood flows. Some areas along Battle Creek are potentially hazardous for flooding. In this part of Idaho, summer thunderstorms can produce large quantities of precipitation in a localized area that cause flash flooding in small drainage like Battle Creek. The unstable nature of the steep slopes along Battle Creek increase the hazard. A landslide combined with a flood event could be extremely destructive. The landslide/flood event that occurred in 1911 destroyed the irrigation canal that had been built a few years before, and filled in some swampy land near the confluence of the creek with the river.

The status of any existing water rights in the study area are unknown. If development occurs under any alternative, water rights would have to be acquired according to Idaho state water law and administered under state jurisdiction.

The diversion dam for the West Cache Irrigation Canal is a low head, concrete, gated structure located on private property approximately one kilometer (3/4 mile) northeast of the national historic landmark boundary. The dam is privately owned and maintained by stockholders of the West Cache Canal Company.

Hazardous Materials

No hazardous materials were observed during visits to the area, and none were reported by Preston area officials who met with National Park Service representatives. The chemicals that have been detected in the Bear River are within state water quality criteria for its designated uses. In alternatives that involve the National Park Service acquisition of land or easements, a level 1 pre-acquisition survey would be undertaken to verify that there are no hazardous materials present.

SOCIOECONOMIC CONDITIONS

Regional Overview

The Bear River Massacre Site National Historic Landmark is in the south-central part of Franklin County, Idaho. Lands in this area are primarily used for agriculture, with the main products being livestock, poultry and dairy products, sugar beets, corn, potatoes, grain and alfalfa. Most of Cache Valley lies in Idaho, but 80% of its residents live in Utah. Logan, lying 44 kilometers (27 miles) south of Preston and at the southern end of the valley, with a population of 32,762 persons, is the largest city in Cache Valley. Since its settlement in the late 1850s, it has served as the center of commerce for the area. Towns in the Idaho portion of Cache Valley are small, ranging from 625 in Franklin to 3,850 persons in the county seat of Preston (1990 U.S. Census Data).

The quality of life, wide-open spaces and relatively inexpensive land prices have resulted in rapid population growth throughout southern Idaho in the last several years. Franklin County's population increased 3.78% from 8,895 persons in 1980 to 9,232 in 1990. It is estimated that from 1990 to the year 2000, the population will grow to approximately 10,800 persons, an increase of approximately 17% (CACI Marketing Systems and the County and City Data Book). One indication of the rapid population growth in the county is the tripling of building permits during the last three years.

The primary occupations in the county are farming, precision production, craft and
repair occupations, and machine operators, fabricators and laborers (1990 U.S. Census Data). The median household income in the county for 1989 was $25,414.

Much of the agricultural land on the flat terraces above the valley and on the valley floor have been designated prime farmland by the Natural Resources Conservation Service (formerly Soil Conservation Service) according to 7 CFR 657. These areas are so designated because they have the best combination of physical and chemical characteristics for producing food, feed, fiber, forage, and oilseed crops.

No agricultural land in the study area has been designated unique, which are lands used for the production of specific high value food or fiber crops. Federal agencies are required to analyze the impacts of their actions on agricultural lands. This policy was developed to minimize the effect of federal programs in converting prime or unique farmland to non-agricultural uses.

Visitor Use

Southeast Idaho is rich in history and natural beauty and draws visitors who appreciate outdoor recreational activities and visiting historical sites. U.S. highway 91, which passes through the site, has been designated an Idaho Pioneer Historic Route, and can be used as an alternative route to Interstate 15 between Salt Lake City, Utah and Pocatello, Idaho. Travelers to destination parks and areas of recreation, such as Yellowstone and Grand Teton national parks and Craters of the Moon National Monument, can drive past the site with only a minimal deviation from interstate travel. Interstate highway 15 is located about 27 kilometers (17 miles) to the west. A scenic diversion through the Lush Cache Valley is only 26 kilometers (16 miles) longer than the interstate route through the high desert of northern Utah and southern Idaho.

Existing Bear River Visitation

A market analysis of the Bear River Massacre Site National Historic Landmark defined the current market share and estimated future visitor numbers, as shown below. The first part of the analysis defined the geographic area likely to contribute visitors and the type of person that would be interested in visiting the site (data collected from CACI Marketing Systems computer database). Visitors may come from all over the world, but most would originate in the regional market that was defined in this analysis. This information was then adjusted for the average travel time that a person would be willing to travel to visit the site. Present and potential future sightseer markets and their respective market shares were then approximated.

Visitation to the Bear River massacre site is limited by the lack of interpretive facilities at the site and publicity about the site in regional tourism centers. Despite these limitations, many visitors still find their way to the landmark (Table 3). Unscheduled tours are given by local residents to approximately 1,500 to 3,000 people per year. Based on the observations of these tour leaders and nearby residents, it is estimated that one to five cars stop at the monument per day during the low season and 20 to 30 cars daily during the five-month peak tourist season. With the unscheduled tours and an average of 2.5 people per car, it is estimated that between 9,633 and 17,063 people visit the site annually.

Based on an adjusted regional market of 594,787 persons and the above estimates of current visitation the current market share at the Bear River site ranges from 1.6% (9,633 visitors) to 2.8% (17,063 visitors). As shown below, with the construction of visitor facilities and National Park Service designation, possible future visitation could reach as high as a 14% market share.

Table 3: Estimated Annual Visitation at the Bear River Massacre Site National Historic Landmark.

*Visitation estimate is based on 213 days in low season, 152 days during high season, and 2.5 persons per car.

Seasonality was determined by comparing monthly visitation at other national park service areas and American Indian sites in the region.

Visitation Forecasts

Possible future visitation at Bear River massacre site has been compared to visitor use at the following four sites in the regional area that have an American Indian theme:

Knife River Indian Village National Historic Site, North Dakota. Open for 18 years, the site received 17,750 visits in 1994. It is 64 kilometers (40 miles) from I-90 and 97 kilometers (60 miles) from Bismarck. The site interprets Plains Indian culture and is comprised of earthlodge dwellings, archeological remains, and a moderate-size visitor center. The state
promotes the site at a low to moderate level.

Nez Perce National Historical Park, Idaho. Open 27 years, this site received an average of 258,805 visits per year from the years 1992 through 1994. The headquarters area is located on U.S. highway 12, 88 kilometers (55 miles) from I-90 and 16 kilometers (10 miles) from Lewiston, Idaho. It has a small visitor center, and interprets both the Nez Perce and Lewis and Clark national historic trails, along with Nez Perce culture. According to the park staff, visitation is strongly influenced by highway signs. Except for the printing of brochures, promotion is conducted by local businesses, cities, and the state.

Big Hole National Battlefield, Montana. Open 23 years, this site’s visitor center received 64,015 visitors in 1994. Now listed as a unit of Nez Perce National Historical Park, it is located 97 kilometers (60 miles) from I-15 and I-90, and 161 kilometers (100 miles) from Missoula. There is a small visitor center and museum, which interprets the battlefield site and the Nez Perce trail. There are only a few highway signs. Except for the printing of brochures, promotion is done primarily by the state.

Little Bighorn National Monument, Montana. The area consists of a national cemetery established in 1879 and a national monument established in 1934. It is located on I-90, 88 kilometers (55 miles) from Billings, Montana. Averaged over the years of 1992 through 1994, 354,355 persons a year have visited the monument. The monument includes a visitor center and museum, and tours of the battlefield are offered. Promotion by the state and general public recognition are high.

Visititation at these four sites ranges from 17,750 to 354,355 persons. The most visited sites are those that have had facilities longer than 20 years, are marketed quite heavily (either by the managers of the site or by a third party such as a state), and lie in an area enjoying high existing tourism. Parks that have facilities such as a visitor center, interpretive signs, picnic areas and restrooms also experience more visitation than other areas. The Bear River Massacre Site National Historic Landmark is not well known in the region and has no developed interpretive facilities, so it is likely that visitation in the immediate future would be closer to the low to mid-range of these numbers rather than the upper range.

The NPS projected future visitation based on the visitor market analyses for Bear River Massacre Site NHL and other national park units. An average travel time of 3.5 hours to Bear River Massacre Site National Historic Landmark was estimated using travel times of visitors willing to travel to see the park and market shares at National Park Service units (see Table 4). With increasing population, the total market share (adjusted for distance) at Bear River should increase to 779,517 in 2003 and 859,298 in 2010. The NPS data above indicate that more publicity and the construction of facilities at the site could increase the visitation to approximately 14% of the total market, with a projection of up to 120,300 visitors in 2010.

The parks listed in Table 4 were selected from a set of data that have for which a formal market analysis has been completed. None of the park units used for comparison represents a historical period or theme similar to Bear River, but several sites such as Mesa Verde, Wupatki, Chaco Culture and Bandelier have an American Indian theme. These areas are all located in sparsely populated areas of the western United States. City of Rocks National Reserve is used for comparison because it is geographically close to the Bear River site and is located in a similar rural setting.

Based on this analysis, and presuming a national park service designation of the site, it is predicted that the Bear River massacre site visitation would climb from an annual figure of 13,000 in 1997 to as many as 120,000 people by year 2010. The visitation would be somewhat lower for a state or local designation, because the national park service designation would result in national publicity and name recognition.

*Data was collected from CACI Marketing Systems database and analyzed by Al Galipeau at the National Park Service.

Table 4: Market Share and Average Trip Distance for Selected National Park Service Units and the Bear River Massacre Site.
Regional Recreational Opportunities

The Bear River Massacre Site National Historic Landmark is centrally located for a wide variety of outdoor recreational opportunities. The area is surrounded by Caribou National Forest, which offers hiking, camping, wildlife watching, horseback riding, mountain biking, hunting, fishing, snowmobiling, cross country skiing, snow-shoeing and many other outdoor experiences. Cub River Canyon, southeast of Preston, provides a mountain camping experience. Riverdale Resort, located eight kilometers (five miles) to the northeast of Preston has a landslide and mineral hot pool. Public and private hot springs (e.g., Riverdale Resort and Lava Hot Springs) are located throughout the area. Bear Lake, a 28,700-hectare (71,000-acre) lake located east of the landmark provides visitors with a variety of water related activities. Bear Lake National Wildlife Refuge is located on the north side of the lake. Downhill skiing is accessible to the south near Logan and Salt Lake City, Utah and to the northwest near Inkom, Idaho. Logan Canyon (to the south) offers excellent rock-climbing opportunities. Yellowstone and Grand Teton national parks, and Craters of the Moon National Monument are also located within a several hours drive from the site. Numerous other open spaces, lakes and reservoirs exist for a variety of outdoor experiences.

Besides outdoor recreation, there are many opportunities to experience the rich cultural and historical heritage of the area. U.S. highway 91, which runs next to the massacre site, has been designated a Pioneer Historic Route and many historic towns and sites can be visited while traveling along this road. Franklin, the oldest town in Idaho, has a historic district listed in the National Register of Historic Places, and a local historical museum that showcases Idaho pioneers. Signs have also been erected along state highways that identify significant historical sites, such as the Oregon Trail and other resources.

Many other cultural attractions are also available in the region. Larger cities such as Logan, Salt Lake City and Pocatello have art museums, dance programs, concerts and theater productions.

INTERPRETIVE FACILITIES

At the present time, the Bear River Massacre is commemorated with a monument bearing three plaques and a sign placed by the Idaho department of transportation (DOT). The monument is composed of stone taken from around the world, each one having special significance to the donor. Very few of them are from the vicinity of the massacre site. The monument is topped by a concrete presentation of a Shoshone lodge. An American Indian metate (grinding stone), probably from the southwestern part of the United States, is incorporated into the south face of the monument.

The three plaques were each added at different times. The first two were placed in 1932 and 1952 by the Daughters of the Utah Pioneers (DUP) and other organizations, the descendants of pioneers who settled the area after the massacre.

The language on these plaques reflects the significance that the event had for the people who erected the monument: by removing the original inhabitants of the Cache Valley, the land was opened for settlement by agriculturalists. These two plaques label the conflict as a battle, enumerate the wounded and killed soldiers, and commemorate the aid given to the wounded soldiers by the people of Franklin. The earlier plaque includes a number of statements that are contested by Shoshone descendants and some historians. There is objection to the characterization of the estimated 90 women and children killed in the "battle" as combatants, to the implication that the encounter was instigated entirely by hostile attacks by Indians on emigrants and settlers, and to the lack of recognition of the Shoshone reasons for the earlier conflicts and a lack of acknowledgement about the part that settlers, emigrants and miners played in provoking those conflicts.

The later plaque mentions that two Indian women and three children were given homes in Franklin after the "battle." Some Shoshone people feel that the help offered to these victims, and the accolades given to the settlers for doing so, diverts attention from the greater tragedy of the massacre itself.

The third plaque was added by the National Park Service in 1990, with the permission of the Daughters of the Utah Pioneers. It commemorates the site as a national historic landmark and contains standard language acknowledging its national significance, and characterization as a massacre.

Interpretation has recently been enhanced by a sign that was erected by the Idaho Department of Transportation near the DUP monument. The sign is large, and is intended to be read from the window of a stopped vehicle. The three sentences on the sign are more balanced than the plaques in their interpretation of the massacre, but still lack any historical contextual information. Directly next to it is a similarly sized sign that interprets the Utah and Northern Railway that passed through this area in the 1880s.

None of the interpretation at the site includes an orientation. The site visitor does not know where the Shoshone village was located, how troops moved about the site, or how the few survivors escaped.

Interpretation is enhanced by the personal services of volunteers from local history organizations who occasionally lead school groups and other interested groups to the site, or speak to them at other locations. Recently, school groups have also visited the site from the Shoshone-Bannock Indian Reservation at Fort Hall, under their own leadership. The quality and consistency of the messages no doubt vary with the knowledge and abilities of the volunteers.

The monument and highway signs are located on the edge of a rather large gravely parking lot owned and maintained by the Daughters of the Utah Pioneers. Two nearby landowners access their property from the parking lot. The lot...
Affected Environment

extends a few hundred meters (several hundred feet) farther to the south than is required for most visitor use in order to accommodate this use by residents.

Vandalism has occurred to the monument in recent months. In January, 1995, someone sprayed the west side of the monument and the DOT sign with red paint. The DUP were successful in removing most of the paint from the plaque and metal sign.

According to nearby residents, the lot is often used by truckers or campers for overnight parking. Trash accumulation is also a problem.

LANDOWNERSHIP

All land within the NHL boundaries is privately owned by 28 different owners. Most are owner-residents. Parcels range in size from 0.35 to 204 hectares (0.86 to 503 acres).

Current county zoning for the area places emphasis on agricultural uses, but that does not prohibit the development of other types of use. For instance, a trailer/recreational vehicle campground is currently being developed on the east side of the highway outside the south border of the NHL.
issues

desired futures
ISSUES AND DESIRED FUTURES

ISSUES

During public involvement phases of the scoping portion of this study, a number of issues were generated in meetings with the landowners. Shoshone tribal members and interested citizens in the Cache Valley (see the "Consultation and Coordination" section of this study for a list of participants and the dates of the meetings). These issues formed a set of problems to be addressed by the various alternatives. Most issues tended to be related to resource protection, visitor experience, tourism and site management.

RESOURCE PROTECTION

The site is currently protected by its designation as a national historic landmark (NHL). This designation is a special category of properties listed in the National Register of Historic Places. For the purposes of compliance with federal historic preservation law, a NHL is treated much as any other national register property. In terms of protection against harmful effects, the landmark designation means that if a federal agency, through funding, permitting, licensing or other approval, takes an action that could affect the landmark, then the agency involved must consider the effects of the project on the property. Under section 110(f) of the National Historic Preservation Act, if any such project would disturb or otherwise affect the site, then efforts must be made to mitigate any potential harm to the landmark. Under the act’s 1992 amendment, the Shoshone people in all four Shoshone tribes would be consulted to determine their assessment of effects on the landmark.

Shoshone people are very concerned about protecting human remains that might still be buried on the massacre field. An Idaho state law prohibiting the desecration of graves (Idaho Code 27-501 through 27-504) provides a legal mechanism for prohibiting people from disinterring, storing, displaying or selling human remains discovered on private property within the landmark boundary. Some Shoshone people are concerned that there is little precedent as to whether the remains of people left unburied on the massacre field, but later buried by natural processes, are also protected by this law. The state law specifically mentions only remains found in deliberately excavated graves.

A more powerful federal law pertaining specifically to burial, the Native American Grave Protection and Repatriation Act of 1990, defines "ownership" of human remains and certain types of artifacts, and lays out clearly defined legal procedures for the repatriation these remains to lineal descendants or culturally affiliated groups of Native Americans. However, this law applies only to human remains found on federal or tribal lands, not on private lands, even if a federal undertaking is responsible for the discovery.
At the present time, the auspices of the National Historic Preservation Act, the Native American Graves Protection Act, and the Idaho burial law are insufficient to protect this resource. In the perspective of the many Shoshone people, neither the state grave protection law nor the federal repatriation and historic preservation laws affords full legal protection for the sanctity of the massacre field while in private ownership. They believe that only federal ownership, through fee simple, or conservation easements, can adequately protect the remains of their ancestors.

THREATS TO THE RESOURCES

Physical threats to the cultural resources are of primary concern. The natural meandering and movement of the river is being affected by human actions upstream from the massacre site, including the use of water for irrigation and the impounding of the river for hydro-electric generation and flood control. Bank modification within the floodplain can also influence channel movement. Irrigation of land behind the surrounding bluffs, combined with the unique geology of the Bear River valley in this area, contributes to frequent slumping and sliding of surrounding bluffs.

An additional threat to historical, archeological and ethnographic resources is excavation, either for the construction of structures such as buildings and roads, or to collect artifacts. Neither activity is prohibited on private land, except for the deliberate excavation of human remains and associated artifacts under the state law. As stated earlier, the Shoshone are concerned that the state law might not protect the remains of people who were not placed in formally excavated graves. As all property is privately held within the landmark boundaries, there is substantial potential for loss of resources.

Impacts have occurred to the resource in the past. U. S. highway 91 bisects the landmark from north to south, and passes very close to the original location of the ford the soldiers used to cross the river. Hot Springs Road and another unpaved road heading towards Battle Creek pass through the middle of the massacre field, where the bodies of slain Shoshone were left unburied. A large irrigation canal runs along the foot of the western bluffs, crossing Battle Creek as it enters the Bear River floodplain.

The area of southeastern Idaho is beginning to experience growth, especially from urban dwellers moving into rural areas to establish vacation or retirement homes. This growth, in the absence of local zoning, could adversely affect the use of the land. Many of the land parcels in the immediate vicinity of the massacre site are very small and would be conducive for the development of recreational facilities or residential subdivisions.

The history of past impacts, combined with the potential for new impacts from uncontrolled development, implies that without further protection, cumulative impacts may eventually destroy whatever may be left of the massacre field, the places of troop movements, 1863 encampment and its predecessors, and the cultural landscape.

VISITOR EXPERIENCE

Most members of the public contacted during scoping for this study acknowledge that the story of the massacre as presented today is unbalanced and inaccurate. There is a recognition that there is more than one perspective on what occurred and why, and the best way for the visitor to understand why such a tragic event happened is to tell as many different versions as possible. These versions should also be placed within the social and historical context of the times.

In the public meetings, it became clear that people who lived in the immediate vicinity of the site, as well as many of the Shoshone representatives, had a number of questions about the massacre itself. They felt that the present type of interpretation is inadequate to answer their questions and they do not know how to go about finding the answers themselves. Most of these questions can be answered with existing information; other questions would require additional studies, especially of the oral history of descendants of survivors.

There is a common agreement that the current land use would not unduly interfere with the visitor experience, if it is kept the same. The rural character of the landscape requires only a minimum of imagination and orientation to understand the basic story of the massacre.

MASSACRE SITE ACCESSIBILITY

Landowners and residents of property within the landmark boundary are concerned that creation of a designated county, state or NPS park would increase uncontrolled visitation to the site, violating their right to privacy, trespassing on private property without permission, creating social trails, frightening livestock, and causing additional traffic on the narrow, unpaved county road that runs through the massacre site.

Shoshone people are concerned that visitors would not behave appropriately on the massacre field itself if allowed to visit it.

Finally, the Shoshone people would like to have access to the massacre field for the purpose of conducting appropriate ceremonies and religious practices related to the massacre event without having to obtain the permission of landowners and/or tenants each time they wish to visit the site.

TOURISM

Issues dealing with tourism touch upon the visitor experience, and on site management issues (which follow). In particular, there is a perception that business people in Preston have much to gain economically by the improved visitor experience at the massacre
site, and that these gains would be at the expense of residents' rights and the cultural heritage of the Shoshone people.

As shown in the visitor use projections detailed earlier, facilities development would probably result in an increase in visitation at the site. While welcoming the opportunity to inform more people about the tragedy of the event, the Shoshone are offended by the idea that business people in Preston could make money from increased tourism caused by the creation of a designated historic site, when the historic event was the killing of so many of their people.

As discussed in the section on accessibility above, both the landowners and Shoshone are concerned that the creation of any kind of designated historic site would attract visitors who might behave in an uncontrolled manner on the massacre field itself.

SITE MANAGEMENT
The way the resources and the land are protected and managed was of paramount concern to all publics contacted during scoping. Residents and landowners in particular are concerned about becoming overburdened with government regulations, which could affect the way they do their business and their way of life.

As discussed above, landowners, residents and Shoshone people alike are concerned about access issues. All three groups would like to limit public access to most portions of the massacre field, either for reasons of privacy or to respect the sacred qualities of the area. In addition, Shoshone people desire access to the massacre field for their own religious or ceremonial purposes.

DESIRED FUTURES
A number of desired futures for the Bear River massacre site were expressed during public scoping. The emphasis of each depended on the special interests of each group. Each of the alternatives seeks to incorporate the desired futures of each group to some extent. Some alternatives achieve the vision of a given group better than others.

Preservationists and historians envision a designated site in which the national significance of the massacre is portrayed, and where cultural resources are protected from future development, souvenir gathering, and, to the extent possible, natural processes.

Local supporters, especially those represented by the Bear River-Battle Creek Monument Association, seek to inform the public of the massacre’s special place in history and to improve its interpretation. They desire that visitors understand the troop movements, the location of the encampment, and where the various individual stories took place.

Shoshone people envision a place where their version of the massacre is presented in order to inform the public and their own people of what happened and why. They desire a recognition of the tragedy of the event, and a commemoration of the Shoshone people who were killed. They seek a place to renew their cultural heritage in ways directly connected to the massacre and what occurred to them as a people. They envision a place in which other people are connected to the emotion of the event, in order to promote cultural understanding.

Landowners and residents envision a place in which none of the rights and privileges they enjoy as owners of property are compromised. In the future, government representatives and visitors to the site would stay off their property and not affect either their privacy or the way they live their lives. They seek a future in which their children can live the same way with the same values for the land they now enjoy.

Commonalities
These differing visions of the future of the Bear River massacre site are not mutually exclusive. They share the following commonalities:

1) All groups recognize that the story as currently presented is unbalanced, and that very little emphasis has been placed on the tragedy of the deaths of so many Shoshone men, women and children. There is a common understanding that the quality of interpretation should be improved, and that the Shoshone viewpoint should be acknowledged.

2) All groups understand that the massacre on Bear River had some personal relevance to them. While the outcome was dramatically different to each group, the very fact that it happened affected what their lives are like today.

3) The two groups with the strongest investment in the site, the landowners and the Shoshone, seek a continuation of a way of life. The landowners do not wish to see their current use of the land change, or if it does, to have it change by their own initiative in response to changing technology and the requirements of their businesses.

The Shoshone seek to continue a cultural heritage that has been endangered for some time. They view the massacre as an event.
tragic as it was, that helps define them as a people who share a common heritage. Because it was a pivotal event in their own history, the story of the massacre can be used as a springboard from which they can rediscover their own past, their unique culture, and their threatened cultural heritage.

4) All groups view portions of the massacre field as a place where visitor access should be controlled. The Shoshone have expressed a desire for visitors to behave respectfully while on the massacre field. Landowners do not want visitors wandering throughout their fields, disturbing their livestock and crops or leaving gates open, among other concerns. None of the groups want visitors digging in the massacre field looking for souvenirs.

These commonalities, combined with an appreciation of the issues involved at the site, were used in constructing a succinct vision for the future of the Bear River massacre site. That vision is articulated on the first page of the main body of text in this study. The vision is synonymous with the projected purpose of a designated historic site.
Actions Common to All Alternatives

DESCRIPTION OF ALTERNATIVES

ACTIONS COMMON TO ALL ALTERNATIVES

The vision statement provided on the first page of this study, provides a basis for actions that the National Park Service views as important to all alternatives. Portions of the vision statement are in inherent tension with other portions, such as the protection of cultural resources and maintaining the current use of landowners. For that reason, no one alternative satisfies all the desired futures of all parties. While different alternatives stress differing aspects of the vision statement, all alternatives seek to fulfill the vision, by providing for the following types of actions:

- protect cultural resources with authorities beyond those offered by the NHL designation;
- commemorate the Shoshone dead;
- balance the story of the massacre by making Shoshone versions available to the visitor;
- recognize the sacred nature of the massacre field;
- allow Shoshone people access to the massacre field for the performance of appropriate ceremonies and religious practices;
- protect private property rights of landowners;

- provide for the continued use of most of the land as agricultural;
- provide an interpretive wayside along the highway that allows the traveler to learn the story of the day of the massacre in a short period of time.

Resource Protection

Resource protection strategies vary by each alternative. However, in all alternatives, additional studies and inventories of cultural resources are proposed.

No alternative seeks to remove the Daughters of the Utah Pioneers monument, as it is recognized that it has special significance to the people of the Preston area, and to descendants of the pioneers. Furthermore, the monument is listed as a contributing structure on the NHL form. However, most alternatives refocus the interpretation by placing additional waysides somewhat removed from the existing monument.

Visitor Experience

Under each alternative, and to greater or lesser degrees, visitors would have opportunities to:

- understand the primary stories relating to the Bear River massacre, and put them in a personally meaningful context;
Actions Common to All Alternatives

- visit the major sites involved in the massacre and the events preceding and following, and comprehend the events that happened there, while respecting rights of private landowners and other legitimate interests;
- experience in their own terms the emotional impact of the massacre;
- understand the points of view of various groups on the massacre: the Shoshone, soldiers, settlers, immigrants and people today;
- place the events relating to the massacre in an accurate nineteenth century context, and the history and interpretation of the massacre in context of current attitudes and perspectives;
- find out about other historical, cultural and recreational resources available that may be of interest, including where to go to see other sites associated with the events leading up to the Bear River massacre;
- honor the memories of people who suffered or whose lives were taken during the massacre;
- learn a sense of stewardship and support resource preservation;
- appreciate and honor other cultures.

Site Management

The way the site is managed is crucial to each of the following alternatives. Only actions that would affect the resources of importance to this area would be controlled, and those controls would be developed in concert with the landowners. For instance, the impacts of hunting, trapping and grazing probably pose no threats to the critical resources, so would probably not be controlled outside of current state law. Further evaluations of their effects would be required before a final determination of what activities normally prohibited within National Park Service units would be allowed to continue.

Landownership

In all alternatives, fee simple land acquisition would be minimized. Wherever possible, land for the purposes of resource protection and visitor use would be acquired through the purchase of easements and/or development rights. To the extent possible, and while still maintaining the goals of resource protection, acquisition of land, either through easements or by fee simple, would be limited to willing sellers. The only lands that would require fee simple acquisition would be those that are to be used for a visitor and cultural center. With the relatively high number of landowners within the area and relatively small parcels, it is anticipated that there would be willing sellers of land or easements for this purpose.

Fee simple purchase could also be considered for any offer made by an individual owning property within the designated boundaries when continued ownership would cause or result in undue hardship. Similarly, similar properties outside the designated boundaries of the historic site could be purchased for use in trade with owners of properties within the designated boundaries.

Boundaries

The boundaries suggested in the alternatives do not dictate what lands would be acquired, but rather what lands would be protected by legislative action. They are prescribed by the location of significant cultural, historic, archeological and ethnographic resources. In some alternatives, the boundaries are largely defined by the cultural landscape, as seen from overlooks where interpretation occurs. The boundaries generally indicate those areas in which design guidelines and resource protection measures would occur.

ENVIRONMENTAL CONSEQUENCES OF ALL ALTERNATIVES

NPS Special Directive 92-11, concerning the content of special resource studies, stipulates that all such studies shall evaluate impacts associated with each alternative in the form of an environmental assessment. The alternatives establish broad management guidelines and their general nature requires that the assessment of impacts also be general. While NPS can make some reasonable projections of likely impacts, they are based on assumptions that may not prove to be accurate in the future. Therefore, this environmental assessment presents only a broad overview of potential impacts relating to the proposed actions for each alternative.

The actions proposed in each alternative were developed with the protection of cultural and natural resources in mind, and mitigative measures are built into each alternative. It is expected that future management plans would be generated to implement a yes one of the alternatives outlined in this special resource study. Future planning efforts would evaluate specific environmental impacts of the actions proposed in this alternative. In the process, more detailed mitigative measures would be analyzed and developed for public comment.

Impact topics were selected to provide a focus for environmental discussions and to ensure that alternatives are compared based on the most relevant topics. Their inclusion was based on federal laws, regulations, and orders; NPS Management Policies; and issues and concerns expressed during public scoping (see the "Issues" and "Consultation and Coordination" sections).

Assessments of impacts were based on the best available information. Area measurements were made using a Geographic Information System (GIS). The GIS database for the Bear River massacre site contains current information on various natural and developed components of the area.

The cultural resources associated with the Bear River massacre site are those
resources of most concern to this study. Additional study impact topics include natural resources, the visitor experience and the socioeconomic environment. All four topics are discussed in detail appropriate to this general level of study in the description of each of the alternatives.

Impacts to the cultural values of people potentially affected by any of the alternatives are intangible and more difficult to describe than threats that occur to physical resources. For instance, the Shoshone people feel an inalienable right to protect and revere the place where their ancestors died. Any actions that affect their ability to preserve the sacred ground, to have access to that ground in order to properly sanctify it, or to pay appropriate homage to the memory of their ancestors are viewed as adverse.

By the same token, the people living in the vicinity of the site value their rights to privacy, property, and way of life. Increased tourism and the interests of governmental agencies can be viewed as impacting those values.

In the development of the alternatives, an attempt was made to evaluate the effects of each alternative on these intangible "cultural" resources as well as the physical cultural and natural resources, the visitor experience, and the socioeconomic environment. The effects of the proposals on the Shoshone people are discussed in the sections on impacts to cultural resources. The effects on the landowners are discussed in the sections on impacts to the socioeconomic environment.

Some concern has been raised about Shoshone access to the massacre field to conduct appropriate ceremonies and religious practices associated with the massacre. Because most of the massacre field is currently used for the growing of hay or other silage, or for grazing, it is not anticipated that this activity would have substantial impact on landowners' use. However, provisions are made in most alternatives for the Shoshone and either the landowners or a government agency through its authorities in respect to conservation easements, to reach an agreement on when and how such access might occur.

In the development of the alternatives, an attempt was made to evaluate the effects of each alternative on these intangible "cultural" resources as well as the physical cultural and natural resources, the visitor experience, and the socioeconomic environment. The effects of the proposals on the Shoshone people are discussed in the sections on impacts to cultural resources. The effects on the landowners are discussed in the sections on impacts to the socioeconomic environment.

However, provisions are made in most alternatives for the Shoshone and either the landowners or a government agency through its authorities in respect to conservation easements, to reach an agreement on when and how such access might occur.

CONCEPT

The existing Daughters of the Utah Pioneers (DUP) monument and the accompanying Idaho Department of Transportation (DOT) sign would continue to commemorate a critical event in the settlement of the Cache Valley area by Euro-Americans. There would be no commemoration of the Shoshone dead. The visitor to the site would continue to stop along the highway for a few moments, long enough to stretch their legs, read the plaques and highway sign, then continue their travels.

RESOURCE PROTECTION

The only protection afforded the historic resources would be that offered by the national historic landmark. As stated earlier, this designation prevents federal agencies from having an effect on significant resources in the NHL without undergoing a rigorous review process. There would be no additional protection for cultural resources on privately owned land or from private undertakings.

VISITOR EXPERIENCE

DUP Monument Wayside

The basic story of what happened on the day of the massacre would continue to be told at the DUP monument and DOT highway sign. The plaques on the monument portray the event as a "battle," are biased to one viewpoint, and some historians and Shoshone people object to their wording.

For special groups, a volunteer would continue to provide more background in the form of personally guided tours, lectures and photocopied excerpts from books and articles. The DOT plans to add...
a map to its existing sign, which would provide orientation to the site.

Because of the NHL plaque, visitors might understand that the massacre has national significance, but no social or historical context would be provided. The tragedy of the massacre would continue to be secondary to the story of the settlement of the area and the help offered to a few survivors by nearby settlers.

The large gravel parking lot would continue to receive conflicting use from site visitors, residents accessing their property, and truckers and other overnight campers who sometimes spend several hours. Volunteers would continue to maintain the lot, monument, and sign, and to collect trash.

**Massacre Site**

Visitors who desire to see the massacre field would drive down Hot Springs Road, which junctures with U.S. highway 91 about 0.4 kilometer (1/4 mile) to the north. The massacre field would continue to be unsigned, and the only visitors that would know its location would be those with special instructions available in guide books or from local residents and volunteers.

**Roads and Trails**

Hot Springs Road, the road that climbs to Cedar Bluff, and the road accessing the Soldiers' Overlook might receive additional traffic as the massacre even becomes better known through guide books and, possibly, an orientation map on the DOT sign. Trails might develop across private land. Visitors might trespass on private land to see where the massacre happened, and to collect mementos of the place.

**SHOSHONE ACCESS**

Shoshone people would have to contact landowners and/or tenants each time they wish to go onto the massacre field to conduct appropriate ceremonies and religious practices.

**MANAGEMENT**

The DUP monument and most of the parking lot would continue to be owned by the Daughters of the Utah Pioneers, as it
would in all alternatives. Routine maintenance, such as trash collection and the remediation of vandalism, would be performed by local volunteers for the DUP. DOT would continue to maintain the parking lot and the DOT interpretive signs.

All other land within the landmark boundaries would remain in private ownership. It would remain zoned as agricultural. Some landowners would continue to dump trash in the direct sight of portions of the massacre field and surrounding bluffs.

The boundary would continue to be defined by the national historic landmark boundary.

**IMPACT ANALYSIS**

**Impacts on Cultural Resources**

There would be no protection for cultural resources from privately funded undertakings, or from any sources other than the federal government, anywhere within the landmark boundary. Because the federal protection offered human remains under the Native American Graves Protection and Repatriation Act apply only to federal and tribal lands, the remains of those people left unburied on the massacre field would receive no protection under that act. They would be protected from federal undertakings as a cultural resource under the auspices of the National Historic Preservation Act. Human remains, if discovered during routine maintenance or construction from private and other non-federal funding sources would be protected under state law.

Artifacts associated with American Indian occupation of the area and the massacre would continue to be collected, as this practice is not illegal on private land.

I used to pick up arrow heads and old butcher knives around here. Once I dug down and found an Indian grave. I wasn’t digging for burial grounds, just digging. But there wasn’t any relics -- all I could find was smoked rocks.

From an 1980 interview with Herber Winn, whose grandfather was the first settler on the Bear River massacre field (Hart 1982:182).

There would be no design guidelines or efforts to limit non-agricultural development. There would be no controls over the development of recreation or tourism-related facilities such as parking lots, curio shops, campgrounds or eating facilities, even on the massacre field. As the population of the county grows, there would be no restrictions on the subdivision of land for residential use. As a result, the cultural landscape would continue to be adversely affected by non-agricultural uses, and ultimately would lose the criteria of integrity that now partially qualifies the historic site as a national historic landmark.

The massacre field would continue to be used to graze cattle and other domesticated animals, and to dump trash, with the possibilities of other development of the massacre field, further affecting the historic qualities of the national landmark. The Shoshone people would continue to be offended by what they perceive as a lack of respect for the people who died in the massacre.

Under the No Action Alternative, there would be no legal method of mitigating these adverse affects.

**Impacts on Natural Resources**

Irrigation and natural precipitation would continue to cause landslides and slumping of the slopes along Bear River. Continuing existing actions would not alter these hazards.

There would not be any new developments or visitor uses under this alternative. Therefore, there would not be any adverse effects on water quality, riparian areas, wetlands, floodplains or natural biological diversity. There would be no additional measures to help protect or restore natural or scenic resources on private or public land.

Bald eagles, peregrine falcon, trumpeter swan, pygmy rabbit, and northern sagebrush lizard are the only federal or state listed threatened, endangered or candidate species that occur in this region. There are no known habitats in or near the study area that are regularly used by these species. This alternative is not expected to affect their existing limited use of this area. Dust emissions and visibility would not be affected because there would be little additional vehicle traffic near the site.

**Impacts on Visitor Experience**

Visitor understanding and appreciation of the Bear River massacre site would continue to be limited by the lack of preservation of and access to key cultural resources. With the No Action Alternative, local residents would continue to offer informal tours of the massacre site. But, without additional interpretive media and staff it would be impossible to offer this experience to all those wanting the opportunity. There would be no additional mitigation provided to protect the scenic resources of the massacre site. Regional recreational experiences that are currently available would not receive any additional publicity.

**Impacts on Socioeconomic Environment**

Except for normal increases in visitation due to population growth in the area, there would be no additional economic benefit to the community. There would likely be some intrusions on the privacy of residents near the site. This activity could be minimized by erecting signs that ask visitors to not trespass and to respect private property rights. There would not be any new development or farmland acquired and converted to non-agricultural uses under this alternative. Therefore prime farmlands would not be adversely affected.
No Action Alternative

Impacts on Transportation

This alternative would result in minimal increases in traffic near the massacre site and no adverse effects to the local roadways.

Cost Considerations

All costs of operating visitor services and maintenance of the DUP monument and parking lot would continue to be borne by volunteers. The Bear River/Battle Creek Monument Association has received a state historic preservation grant of $400 a year for the last few years to pay for travel expenses for a volunteer to attend meetings associated with protecting and interpreting the site. This funding source may continue in the future.

ALTERNATIVE 1: HISTORIC SITE
(Minimal Action)

CONCEPT

Resources within the national historic landmark would receive additional protection through local or state legislation; interpretation would be enhanced with a more balanced representation of the basic story that clearly states the national significance of the event. No commemoration of the Shoshone dead would be provided except for that implicit in the increased interpretation of the Shoshone story. Management would occur at the local level, with state leadership. All current landowner use would be maintained, and property rights would be reinforced.

RESOURCE PROTECTION

Cultural resources would continue to be protected from federal undertakings as a
part of the NHL designation and under the auspices of the National Historic Preservation Act. In order to provide extra protection from actions by entities other than federal agencies, local ordinances would be developed to protect human remains, and other cultural resources on private lands within the landmark boundary. Primary protection would be provided for resources on the massacre field.

Local governments would work with landowners to develop voluntary design guidelines within the landmark boundaries. The county would work with local authorities and citizens to strengthen zoning regulations in order to discourage development inconsistent with agricultural uses within the landmark boundaries. One of the goals of this historic site designation, as articulated in the vision statement at the beginning of this study is to provide a place where visitors can learn the various viewpoints of what happened at the massacre. It is also a goal to protect all of the cultural resources connected with the massacre, including the stories of the Shoshone people. Integral to the achievement of these goals would be the collection of oral histories related to the massacre event. The manager of the site would work with Shoshone cultural representatives and pioneer descendants organizations to collect those rapidly disappearing sources of information.

VISITOR EXPERIENCE

Highway Wayside

The basic story of what happened on the day of the massacre would be told at a highway stop near the DUP monument. New wayside exhibits would include an orientation map and a statement about respecting landowners' rights to privacy.

While a more balanced presentation of the story would be provided, there would be only limited opportunities to provide for the context story, differing stories, or an orientation to other related resources. Some effort would be made to emphasize the national significance of the event and why it is so important.

The parking lot at the highway wayside would be redesigned to separate the access to private property from the visitor use area and to make the area more pleasing visually. Interpretive facilities would be upgraded to encourage people to leave their cars and spend a little time learning more about the massacre. An orientation map would be added to the wayside along with a message encouraging visitors to respect private property. This message could be reinforced by informing people of the sacred nature of the massacre field.

Massacre Site Wayside

An additional wayside would be provided in the immediate vicinity of the massacre field to provide a stronger emotional connection to the site and to give the visitor who wishes to go to the place where it happened the opportunity to do so. This wayside would emphasize the Shoshone story. It would be located on the massacre field in a location to be determined in cooperation with a willing landowner. An easement for the wayside would be purchased, and appropriate fencing and signage of private land adjacent to the wayside would be provided.

Shoshone Memorial

There would be no memorial to the Shoshone dead other than that implicit in the interpretation of Shoshone story at the massacre field.

Visitor Center/Chamber of Commerce Services

A small visitor center would be established in Preston to provide more information on the social and historical context of the massacre. An emotional connection to the tragedy would be enhanced through personal services, and limited audio-visual media (e.g., a television with a video-tape) of Shoshone family stories and pioneer reminiscences. This visitor center would also contain a few exhibits, and sales of books and Shoshone crafts. Space could also be provided for chamber of commerce facilities, and orientation to other points of interest in Franklin County. In addition, this facility would provide space for an administration office.

Roads and Trails

Minimal upgrades to Hot Springs Road as far as the massacre field wayside would be sufficient to handle additional traffic. A small parking lot (3-4 vehicles) would be provided at the massacre field wayside. This parking lot would be designed so that people could turn around and return to the highway. There would be no designated trails, and the creation of unofficial trails by people wandering across the landscape would be discouraged through fencing, signage, and a repeat of a message indicating that the massacre field is sacred ground.

SHOSHONE ACCESS

Formal agreements between the tribes and individual landowners would be negotiated to provide Shoshone people access to the massacre field to conduct appropriate ceremonies and religious practices. County officials and the state historic preservation officer would provide leadership in reaching those agreements.

MANAGEMENT

The site would be managed by Franklin County, perhaps through some other organization formed specifically for the purpose. Compliance with design guidelines to preserve the cultural landscape would be voluntary.
Leadership in coordinating local resource protection legislation and in developing design guidelines would be provided at the state level.

NPS could provide technical assistance to establish interpretive facilities and draft design guidelines if so requested.

After the facilities were developed, one person would be required for administration of the site, routine maintenance of waysides, and distribution of interpretive materials. Additional staffing would be on a volunteer basis. The boundary would coincide with the national historic landmark, which encompasses 684 hectares (1691 acres).

ADDITIONAL COMMENTS

This alternative could be adopted as a beginning point towards implementation of any of the other alternatives.

IMPACT ANALYSIS

Impacts on Cultural Resources

There is a potential for disturbance of human remains and archeological resources at the proposed massacre field wayside. Every effort would be made to design the small parking lot, any necessary road improvements, and wayside exhibits to minimize ground disturbance. For instance, parking spaces could be constructed on fill material rather than be cut into the surrounding land. If ground disturbance is unavoidable, limited archeological investigations may be necessary, but those investigations would be conducted in consultation with Shoshone tribal and cultural representatives and would be conducted in the presence of a Shoshone monitor, under the auspices of an agreement as described below.

An agreement would be entered into between Franklin County and the Shoshone tribes to establish procedures should human remains be found during any excavations on the massacre field, either construction-related or for archeological tests prior to design of facilities. The state historic preservation officer could assist these entities in preparing the agreement. If human remains were found during any type of excavation, the excavation would be stopped immediately, and the procedures of the agreement would be followed.

Because design guidelines developed to protect the scenic qualities of the landscape would be voluntary, they may not be very effective in protecting the integrity of the national historic landmark. Financial incentives offered through historic preservation grants and tax incentives may encourage landowners to conform to the guidelines, but in the spirit of a locally administered alternative, no mechanisms exist to encourage adherence.

This alternative allows very little latitude for tribal involvement other than through the agreement on treatment of human remains and in their assistance in the preparation of audio-visual media for the visitor center. Agreements would be negotiated with each individual landowner allowing Shoshone access to the massacre site, which may be a long, complicated process. There would probably not be any provision to compensate the landowners for any hardship that might accrue from these agreements.

Impacts on Natural Resources

The impacts on natural resources would be the same as for the No Action Alternative, with the exception of a minor, localized impact on vegetation. Improvements to existing roads and parking near the massacre site wayside could disturb a small amount of adjacent vegetation in the immediate area.

Minor short-term emissions and noise near the site would also result from road improvement and parking construction activities.

The highway and massacre site waysides would be located on previously disturbed agricultural lands, and no impacts to biological diversity are expected. There would be no development in floodplains or wetlands, and no environmental impacts are anticipated.

Impacts on Visitor Experience

Visitors would have limited on-site opportunities to understand and appreciate the Bear River massacre. Existing scenic resources at the site would be protected through voluntary design guidelines and incentives. Promotion of regional recreational opportunities would be enhanced through the Chamber of Commerce space available in the visitor center.

Because the visitor center is removed visually from the massacre site, and would require that a visitor drive from the center to the site (or vice versa), interpretation may duplicate some of that undertaken at the site.

Impacts on Socioeconomic Environment

There would be a one-time benefit to the local economy if labor and building materials used to construct wayside exhibits, massacre site pull-out, and improvement of Hot Springs Road and the DUP parking lot are supplied from the local area. Increased visitation to the visitor center and massacre site would result in some increases in local sales taxes and revenues. The local economy would also benefit from annual operating expenses and paid staff at the visitor center.

This alternative provides landowners the flexibility to remain on their land and continue with land use activities that are compatible with the historic site. Easements not to exceed four hectares (10 acres) would be required on private land for a wayside near the massacre site. The scenic quality of the area would be protected with voluntary design guidelines and incentives. Signs and fencing would reduce trespass on private land. There would not be any new developments or farmland acquired and converted to non-agricultural uses under this alternative. Therefore prime farmlands would not be adversely affected.

This alternative retains existing private landowners’ rights to the greatest extent possible by offering only limited zoning
revisions, which would be initiated on a local level and with full participation of affected landowners. Some voluntary guidelines protecting the cultural landscape and cleaning up property would be offered. Because guidelines are voluntary, only limited financial incentives would be offered for compliance. Signs to protect private property could be provided upon request, but fencing would be at the expense of the landowner. Exceptional guidelines protecting the cultural landscape would be voluntary, there would be no mechanism to assure compliance, and they may not prove effective. There would be no impact on the use of private owners, except that landowners themselves would be responsible for keeping visitors off their land, and would receive only limited compensations for additional signage and fencing that would be necessary as visitation increased. These compensations would have to be regarded as part of the operational expenses of the historic site, and provided through legal mechanisms at the local level.

Resources would experience increased threats from incompatible development, such as the recreational vehicle park that is currently being constructed near the south boundary of the landmark.

Cost Considerations
Operational costs would consist of one full-time site manager to provide leadership in accomplishing the tasks of the proposal, to oversee the maintenance of facilities, and to arrange for volunteer personal services at the visitor center. Operational costs would be for periodic maintenance of the wayside and the visitor center, and for nominal compensation of volunteers to operate the visitor center. The rental of a portion of a building would also be required. Operation costs for a year are estimated at $175,000.

Project-related costs would consist of the design and remodelling of an existing structure for use as a visitor center in Preston. In addition, the design, construction, and placement of wayside exhibits, the redesign of the highway wayside and provision of a small pull-out at the massacre site wayside would comprise development-related costs. Total development costs are estimated to range from $1,200,000 to $1,400,000.

Acquisition costs would involve the purchase of an access easement to less than four hectares (10 acres) for a small parking lot and exhibit on the massacre field.

ALTERNATIVE 2: STATE HISTORIC SITE

CONCEPT
Resource protection would be provided through the acquisition of conservation easements on the massacre field. A boundary somewhat larger than the national historic landmark would be established to protect the cultural landscape. Interpretation would be enhanced by balancing the basic story at a highway stop, and expanding on the contextual story at a visitor and cultural center on an overlook. A monument commemorating the Shoshone dead would be provided. The present agricultural use of the land would continue.

The cost of collecting oral histories about the massacre should not exceed $100,000, and could probably be done for less if local university students and Shoshone people worked together on a voluntary basis.

Operational funding would be provided by Franklin County. Funding for specific projects and the collection of oral histories could be supplemented by both state and federal historic preservation grants, as well as private donations. It is anticipated that funding might be difficult for Franklin County and that landowners throughout the county might have to bear the costs of this alternative through increased property taxes.

Management would be cooperative among a number of interested entities, under the overall leadership of the Idaho State Parks and Recreation Department. Residents and landowners would be given a strong position in the management of the area, but the broader picture would be maintained by including partnerships with other state, tribal, and federal entities. Ownership would remain almost entirely private and the current land use would be preserved. Proposed public ownership of land would amount to a visitor and cultural center site
in fee simple, and 58 hectares (144 acres) of conservation easements on the massacre field.

**RESOURCE PROTECTION**

Cultural resource protection would be extended to the historic resources enumerated in the NHL nomination form, and any additional archeological and ethnographic resources, and the cultural landscape through the acquisition of conservation easements on the massacre field and scenic easements and/or development rights within the larger cultural landscape.

Not all cultural resources associated with the massacre and generally described in the Affected Environment section of this study have been inventoried. While the historic resources are relatively well documented, there is a need to conduct additional studies in order to adequately protect cultural resources and to properly assess the impacts of actions in future planning efforts. Under this alternative, the following studies would be conducted:

- non-intrusive archeological inventory, overview, and assessment;
- ethnographic resource studies devised to inventory sites, structures, objects, landscapes, or natural resource features in the vicinity that have traditional, religious, subsistence, or other significance in the Shoshone cultural system;
- oral histories of the descendants of Shoshones, pioneers, and soldiers;
- a cultural landscape study.

**VISITOR EXPERIENCE**

**Highway Wayside**

The basic story of what happened on the day of the massacre would be told at a highway stop near the DUP monument. The story would be presented in a more balanced form, with emphasis on the national significance of the event. A new wayside exhibit would include an orientation map and a statement about respecting landowners' rights to privacy, reinforced with a message about the sacred

---

**ALTERNATIVE 2**

Bear River Massacre Site

National Park Service/U. S. Department of the Interior

DW/Ma, 07/80/2010/40
ground. Directions would be provided on how to access other waysides, overlooks, and a visitor center.

The parking lot at the highway wayside would be redesigned to create a more pleasant place to stop, but in such a way as to discourage overnight use, as well as to provide some separation between private access and visitor use. Appropriate fencing and signing of private land adjacent to the wayside would be provided.

**Massacre Site Wayside**

The tragedy of the event could be emphasized by an additional wayside in the immediate vicinity of the massacre field. This wayside would give the visitor an opportunity to go to the place where it happened without otherwise violating rights to privacy or the integrity of the sacred ground. This wayside would emphasize the Shoshone story. A small parking lot, space for interpretive media, and sufficient room to turn around and return to the highway would be required. The location would be provided by a willing landowner. The affected landowner(s) would be compensated through the purchase of easements and development rights, along with other incentives.

**Shoshone Memorial**

Commemoration of the Shoshone dead would take the form of a Shoshone Memorial which would be placed on the massacre field or in another location suggested by Shoshone people and in cooperation with a willing landowner. The design for the memorial would be developed with the full participation of Shoshone tribal and cultural representatives. The intention is to provide a memorial that pays homage to the people who died on the massacre field. This homage must be appropriate to the descendants, and should take a form that has special meaning to them. The memorial may or may not be placed adjacent to the massacre site wayside, and may or may not be accessible to the general public, depending on the wishes of the Shoshone people.

**Visitor and Cultural Center**

A combination visitor center and cultural center would be located near the overlook wayside to provide for depiction of the social and historical context of the massacre, and to preserve and interpret the various accounts of the massacres as told by all participants. This facility would be built on the Soldier's Overlook to the east of the massacre field. The building would be placed far enough away from the edge of the bluff to avoid potential landslides and, if possible, to be out of sight of visitors standing of the massacre field. Here the visitor could see and hear descendants of survivors tell their family stories, either personally or through audio-visual media. It would contain exhibits, a variety of interpretive media, an auditorium, space for cultural demonstrations, and sales of books and Shoshone crafts. The visitor center is where the context for the massacre would be told, as well as the differing versions of the massacre event. It would also be a place to learn about related places and events. The visitor center would also provide space for administration offices.

The adjoining cultural center would be located in a space separate from activities in the visitor center, but would share the same structure. It would be a place where visitors could gain an understanding of both Shoshone and pioneer ways of life through cultural demonstrations. It could also serve as a repository for the various stories of the massacre as told to descendants of survivors and pioneers. Overall management of the center would be by the state parks and recreation department, but staffing and expertise would be drawn from Shoshone and local populations.

**Overlook Wayside**

An additional wayside would be provided at overlook near the visitor and cultural center. This wayside would provide a general overview of the massacre site, and help the visitor understand why the Shoshone were encamped at that location, how big the village was, what the troop movements were, and what routes were taken by escaping survivors. The affected landowner(s) would be compensated through the purchase of easements and other incentives. Appropriate fencing and signage of private land adjacent to the wayside would be provided.

**Roads and Trails**

The visitor experience on site would be almost entirely via a personal vehicle. It might be necessary to upgrade Hot Springs Road from its intersection with U.S. highway 91 to the massacre field wayside and/or Shoshone Memorial to handle additional traffic. Additional upgrades would be necessary to the gravel road to the overlook visitor and cultural center.

In addition to redesigning the parking lot at the highway wayside, small parking lots would be provided at the massacre site wayside and possibly the Shoshone Memorial (dependent on Shoshone wishes). The visitor center would have a somewhat larger parking lot sized to accommodate projected visitation.

A single trail would be provided from the overlook parking to the overlook. There would be no other trails, and unofficial trails would be discouraged through fencing, signage, and a message concerning the sacred ground.

**SHOSHONE ACCESS**

After the state had acquired conservation easements to the massacre field, formal agreement(s) between the state, as managers of the site, a heritage commission organized to advise the state, and the Shoshone tribes would provide Shoshone people with the ability to go onto the massacre field to conduct
appropriate ceremonies and religious practices. The state historic preservation officer would provide leadership in reaching those agreements.

**MANAGEMENT**

The site would be a designated state historic site operated by the Idaho State Parks and Recreation Department. A heritage commission representing several different interest groups (such as NPS, tribes, landowners, the state historic preservation officer, and local interest organizations) would assist the state in managing the site. Specific roles of each entity would be determined under a specific management plan.

For instance, if requested, the NPS might provide technical assistance to the state and heritage commission in developing resource protection plans, research, and interpretive planning. The state would operate the visitor center and provide administrative services. The tribes, in cooperation with local history organizations, might be actively involved in planning cultural activities and demonstrations. Both would work with the state in facets of research and development of the interpretive story. The landowners may assist the state in developing design and land protection guidelines, which would be enforced through a landowners’ association. Other local organizations might be responsible for outreach, publicity, promotion, and coordination of specific events.

All entities would have representatives on the commission that would review, coordinate and approve actions by the state. All entities would have equal voices in decision-making.

The park would be administered by a state park superintendent and a small administrative staff responsible to the commission. A relatively small core staff for interpretation, resource protection, and maintenance could be partially supplemented with volunteers. This volunteer staff could be obtained from both the local history organizations and the Shoshone tribes. A paid Shoshone staff person would oversee the operations of the Shoshone cultural demonstrations and interact with the interpretive staff. Cultural demonstrations could be staffed by volunteers or permanent paid positions from both the Shoshone and local pioneer organizations, although there should be at least one demonstration available at all times.

**Cultural Landscape**

Protection of the cultural landscape would be accomplished through protective covenants and voluntary design guidelines reinforced with economic incentives. These covenants and design guidelines would be developed by the heritage commission with heavy involvement by the landowners. Zoning would prohibit new development not consistent with agricultural pursuits (e.g., subdivision housing, RV parks, curio stores). Covenants would be designed to protect landowners, not to penalize them.

**Boundary**

The boundary would include the study area as defined by the cultural landscape as seen from the Soldier’s Overlook, which would encompass about 965 hectares (2380 acres).

Land would remain in private ownership except for a parcel large enough to accommodate the visitor and cultural center and its attendant parking lot. Easements would be purchased for access to the massacre site wayside, the overlook wayside, and the Shoshone Memorial.

The state would use the willing seller/willing buyer method to purchase fee simple and easement interests in land. The state would also accept donations and use land exchange techniques to acquire interest in land from willing parties.

**IMPACT ANALYSIS**

**Impacts on Cultural Resources**

There is a potential for the disturbance of human remains and archaeological resources at the proposed massacre field wayside and Shoshone Memorial. As described in Alternative 1, limited archeological testing in any proposed location of the wayside and memorial should precede the design of parking, exhibit structures, memorial and road adjustments.

An agreement would be entered into between the state, the Shoshone tribes, and, if federal funding sources are used, the NPS, to establish procedures should human remains be found during any excavations on the massacre field. A Shoshone monitor would be present during any archeological testing or other ground disturbance at the massacre field. If human remains were found, the excavation would be stopped immediately, and the procedures of the agreement would be followed.

A number of cultural resource studies are proposed in this alternative in order to provide information necessary to manage and protect the resources, and to properly evaluate impacts of proposed actions in future environmental analyses. These studies would be conducted under the auspices of the Idaho state historic preservation officer, and in consultation with the Shoshone tribes. Shoshone cultural advisors would be consulted in all studies related to the Shoshone, and cultural sensitivities about the studies would be respected. The collection of oral histories and other ethnographic information, in particular, would conform to confidentiality concerns of the Shoshone people.

The affects to the Shoshone people are generally beneficial. This alternative allows for more tribal involvement other than in Alternative 1. Their involvement would be through the agreement for the treatment of human remains, their representation on the heritage commission, and their participation in the cultural center. Shoshone people would also be consulted in the preparation of any interpretive media at the visitor center and in the waysides. Individuals from the tribes would also have access to the massacre field for the conduct of appropriate ceremonies and religious practices through a single formal agreement with the state, which would
acquire conservation easements to the massacre field.

In the spirit of cooperative management of the site, the tribes would be expected to help pay for the operation of the cultural center. This cost would constitute the only adverse effect to the tribes.

The visitor and cultural center would be located away from the edge of the bluff, partially to avoid impinging of the cultural landscape as seen from the massacre field. If it was not possible to accomplish this goal, then appropriate design, screening and other mitigative measures would be developed.

The Soldier’s Overlook is far enough away from the massacre site that modern intrusions, such as the West Cache Irrigation Canal and U.S. highway 91, do not pose great impacts to the scenic quality of the cultural landscape as viewed from the proposed overlook wayside. The proposed waysides at the highway and massacre field, and the Shoshone Memorial, likewise, would not be noticed from this location. Their impact would not require mitigative measures.

The highway is somewhat more of an intrusion on the landscape when viewed from the massacre field. Vegetative screening can mitigate some of those impacts and would be used to the extent possible. The irrigation canal is higher than the massacre field and its eastern embankments appear to be part of the natural hillsides. Therefore it is not noticeable to most observers.

### Impacts on Natural Resources

Geologic hazard impacts would be the same as described for the No Action Alternative. The visitor and cultural centers and trail at the Soldier Overlook would need to be appropriately located to avoid landslide hazards near the slopes along Bear River. Siting of this facility, design considerations and mitigation for the geologic hazards would be identified during later planning stages.

The visitor and cultural centers, overlook, wayside, parking lots and improvements to existing roads and parking lots would be located on previously disturbed agricultural lands, and no impacts to natural biological diversity are expected. A trail from the visitor center to the overlook could disturb a small amount of natural vegetation.

Design guidelines could limit non-agricultural development on private land and thus reduce the potential for additional vegetative disturbance.

No development would be sited in floodplains or wetlands, and no adverse environmental impacts are anticipated.

Water for development and visitor use may be supplied from wells. Wells would be developed according to state water resource protection regulations to avoid adverse impacts to groundwater and/or surface water resources. Water rights would be acquired according to Idaho state water law and administered under state jurisdiction.

This alternative is not expected to affect existing limited use of this area of federal or state listed threatened, endangered or candidate species.

Minor short-term emissions and noise near the site would result from construction activities to build new facilities and improve roads and parking. Increased vehicle traffic on unpaved roads would increase airborne dust and slightly reduce visibility.

### Impacts on Visitor Experience

This alternative provides visitors a variety of opportunities to understand and appreciate the Bear River massacre. Continued private uses of the land within the historic landscape would preclude restoration of the area to a natural or historic setting. Some visitors may see current land uses as visual intrusions.

However, this impact would be offset by providing an interpretive program, constructing visitor and cultural centers, and by formally memorializing the victims of the massacre. The visitor and cultural centers would be sited and designed to blend with the natural surroundings. The development of a scenic overlook and an additional wayside would enhance opportunities to experience scenic vistas.

### Impacts on Socioeconomic Environment

Increased sales and tax revenues, operating expenditures at the visitor and cultural centers and their paid staffs would economically benefit the local economy. Besides employment at the state historic site, visitor-related facilities such as a hotel, restaurant, service station and/or conveniences store would enhance the local economy. Existing businesses along travel routes would also benefit from increased tourist volumes. If local resources are used to build the visitor and cultural centers, there would also be a one-time local benefit from labor and materials.

Private landowners would be provided flexibility to remain on their land and use it for compatible purposes. Similar to Alternative 1, existing scenic resources would be protected through voluntary design guidelines, covenants and zoning. Trespass on private land would be minimized with signage and fencing.

This alternative protects private landowners’ rights through the formation of a landowner’s protective association. This association would represent the landowners on the heritage commission, and would be involved in devising scenic protection and design guidelines.

Landowners would further be compensated for hardships occurred through compliance with design guidelines. Signs and fencing to protect private property would be provided upon request. Visitor access would be structured to avoid all private property. In addition, interpretive media would stress the importance of respecting landowner property rights and the sacred ground.

Approximately 8-14 hectares (20-35 acres) would be purchased in fee simple to build the visitor and cultural center. A willing landowner would be compensated for the fair market value of the land. This action would remove a small amount of prime farmland from agricultural production.
The site of the visitor center would be acquired strictly on a willing seller/willing buyer basis, and could be acquired fee simple through purchase, donation or land trade.

Conservation and scenic easements would be acquired for an additional 58 hectares (144 acres) of land on the massacre field itself.

**Impacts on Transportation**

An increase in visitors would cause more traffic congestion, noise and accidents on Hot Springs Road and other roads leading to the visitor center and wayside. Roads would be improved and parking lots built to accommodate the additional traffic. The DUP parking lot on U.S. highway 91 would be improved to provide better access, to reduce overnight parking and to reduce the impact on adjacent landowners. Increased maintenance would be necessary on roads that would have increased traffic volumes.

**FEASIBILITY**

Alternative 2 does not propose an addition to the national park system. The alternative is dependent upon the state of Idaho taking the lead in writing legislation creating a unit of its state park system, and in funding all operational and most project-specific costs. The concerns of Shoshone people living in Wyoming, Utah and Nevada might not be given the attention that a national perspective could provide.

All historic resources pertinent to the massacre event itself are included within the landmark boundaries, but, in order to adequately protect cultural resources in private ownership, the acquisition of conservation easements would be required to extend state historic preservation law to the massacre field.

**Cost Considerations**

Operational costs would consist of a full-time site manager to provide leadership in accomplishing the tasks of the proposal and to oversee the operation and maintenance of facilities. A staff would also be required, consisting of enough people to operate the visitor center year-round and week-long. One or two positions would be required to operate the cultural center. Additional projected operational costs would be for periodic maintenance of the wayside and the visitor/cultural center. The cost of incentives for landowners and residents to comply with scenic and design guidelines could also be considered an operational cost. Operational costs are estimated at $375,000 a year.

Project-related costs would consist of the design and construction of the visitor/cultural center and attendant parking. Approximately 3.2 kilometers (two miles) of road from highway 91 to its location on the Soldier’s Overlook would probably require improvement. Project costs would also include the design and construction of wayside exhibits, the redesign of the highway wayside and provision of small pull-outs at the massacre site wayside and possibly the Shoshone Memorial. The design and construction of the Shoshone Memorial is also considered a cost of this alternative. Development costs are estimated to be between $6,900,000 and $8,900,000.

Approximately 8-14 hectares (20-35 acres) of land would be acquired fee simple for the construction of the visitor and cultural center. The purchase of access, conservation, and scenic easements would be required at the highway and massacre site waysides, and Shoshone Memorial. In addition, an easement would be required for the county road leading to the proposed visitor center, and Hot Springs Road in order to effect road improvements. The total size of the easements would be about 80 hectares (200 acres). The state may also wish to purchase development rights for the remaining 850 hectares (2100 acres) within the cultural landscape to assist in protecting the scenic qualities.

The costs of all inventory studies is estimated at about $400,000.

Operational funding for the visitor center and maintenance of other site facilities would be provided by the State of Idaho. Operational funding for the cultural center would be a cooperative venture between the Shoshone tribes and pioneer organizations. Project and cultural resource inventory funding could be provided through a combination of federal and state sources under special legislation and historic preservation grants, possibly supplemented with private donations.

**ALTERNATIVE 3: NATIONAL HISTORIC RESERVE**

**CONCEPT**

The cultural resources would be protected by the National Park Service acquisition of conservation easements. A boundary somewhat larger than the NHL would be established to protect cultural landscape values, but present agricultural use of most of the land would continue. Interpretation would be enhanced by balancing the basic story at a highway stop, and expanding on the contextual story at a visitor and cultural center on an overlook. A monument commemorating the Shoshone dead would be provided.

The site would be managed by a combination of interested entities under the overall leadership of the NPS. Residents and landowners would be given a strong position in the management of the area. Ownership would remain almost entirely private and the current land use would be preserved. Proposed public ownership of land would amount to a visitor and cultural center site in fee simple, and 58 hectares...
(144 acres) of conservation easements on the massacre field.

**RESOURCE PROTECTION**

The cultural resources, including the cultural landscape, would be protected through the acquisition of conservation easements, thus extending national historic preservation law to cultural resources held in private ownership. Such protection measures, and the extent of the authorities conveyed with the easements would be devised through a cooperative effort between local residents and landowners, and appropriate local, state, tribal and NPS officials.

As noted in the description of Alternative 2, not all cultural resources associated with the massacre have been inventoried. While the historic resources are relatively well documented, there is a need to conduct additional studies in order to provide information necessary to manage and protect the resources, and to properly evaluate impacts of proposed actions in future environmental analyses. As a matter of National Park Service policy, the archeological, ethnographic, and cultural landscape studies listed in Alternative 2 would be undertaken, as well as the collection of Shoshone oral histories.

**VISITOR EXPERIENCE**

**Highway Wayside**

A balanced presentation of the basic story of what happened the day of the massacre would be told at a highway stop near the

DUP monument. As in Alternative 2, a new wayside separated from the existing monument would include an orientation map and a statement about respecting landowners' rights to privacy. Directions would be provided on how to access other waysides and the visitor center.

A parking lot would serve the highway wayside somewhat removed from the existing DUP monument. Resident access would be separated from the parking area, and it would be designed in such a way as to discourage overnight parking.

**Massacre Site Waysides**

Additional waysides would be provided in the immediate vicinity of the massacre field and near the hot springs to provide a stronger emotional connection to the site.

---

**ALTERNATIVE 3**

Bear River Massacre Site
National Park Service/U.S. Department of the Interior
DSC/May 93 - 403/20107
and to give the visitor an opportunity to go to the place where it happened. These waysides would concentrate on the Shoshone story, and troop movements. Stories that have immediate connection to place would be told here, with the larger, contextual story being told elsewhere. Small parking lots and space for interpretive media would be required for the massacre site and hot springs. Their locations are to be determined partly by landowners willing to grant easements to their property with appropriate compensation. Appropriate fencing and signage of private land adjacent to the wayside would be provided.

**Shoshone Memorial**

Commemoration of the Shoshone dead would take the form of a Shoshone Memorial on the massacre field as described in Alternative 2.

Visitation would be highly structured with utmost respect paid to the sacred nature of the massacre field and private ownership.

**Visitor and Cultural Center**

In order to depict the historical and social context of the massacre, and to present the variety of stories connected with it, a visitor center would be located on an overlook to the west or north of the massacre site, on Cedar Bluff or Battle Creek Bluff. Here the visitor could see and hear descendants of survivors tell their family stories. It would contain exhibits, a variety of interpretive media, an auditorium, space for cultural demonstrations, and sales of books and Shoshone crafts. It would also be a place to learn about related places and events, including the location of the sites of historic events that led to the massacre.

The visitor center would also provide space for administration offices.

A trail would lead to an overlook, where an overview of the massacre site could be obtained. Because it is within a short walking distance of being able to see the massacre site, interpretation at the visitor center would not have to duplicate some of that undertaken at the highway stop and near the massacre field. This wayside would provide a general overview of the massacre site, and help the visitor understand why the Shoshone were encamped at that location, how big the village was, what the troop movements were, and what escape routes were used.

In an associated cultural center, visitors also could obtain an understanding of Shoshone ways of life at the time of the massacre through cultural demonstrations. While occupying the same structure as the visitor center, the space would remain separate and distinct. In keeping with the joint management concept of this Alternative, the cultural center would be entirely operated and staffed by one or more of the Shoshone tribes, and would have a Shoshone name.

**Roads and Trails**

It would be necessary to upgrade Hot Springs Road from its intersection with highway 91 to the hot springs wayside to handle additional traffic. Additional upgrades and possibly new construction would be necessary to a road going to the visitor center and overlook.

The parking lot at the highway wayside would be redesigned. Small parking lots would be provided at the massacre field and hot springs waysides, and possibly the Shoshone Memorial. In addition, a parking lot sized for projected visitation would be necessary at the visitor center site.

Limited trail access would be made available to the visitor at the overlook viewpoint. If the landowner is willing to grant an easement for a trail to the hot springs, one would be provided. There would be no other trails, and undesignated trails would be discouraged through fencing, signage, and the sacred ground message.

**SHOSHONE ACCESS**

After the purchase of conservation easements for the massacre field, Shoshone people would be granted access for the conduct of appropriate ceremonies and religious practices without having to obtain prior permission. This right would be granted them as a part of the enabling legislation creating the Bear River massacre site as unit of the national park system.

**MANAGEMENT**

The site would be a designated National Historic Reserve under National Park Service management, advised by a heritage commission. This heritage commission would be established under the Federal Advisory Commission Act. It would be comprised of persons representing area landowners, citizen and historical groups, a historical scholar, a member of the Franklin County Commissioners, the local Chamber of Commerce, representatives of the Shoshone tribes, and the Idaho state historic preservation officer. Special emphasis would be given to the landowners' representation in matters dealing with scenic and design guidelines, and in other matters relating to the special interests of residents and landowners.

Additional consultation would be undertaken with the Shoshone tribes in matters such as the Shoshone Memorial and development of the interpretive plan, especially in matters of presenting the Shoshone versions of the story.

NPS would be responsible for resource protection, research, development of interpretive facilities, park planning, site management, visitor contact, administration and facilities maintenance. Assistance from the local, state and tribal governments would occur through the auspices of the heritage commission.

All staff would be provided and paid for by the National Park Service except in the Shoshone cultural center. The park would be administered by a superintendent and administrative, resource management and protection, interpretive, and maintenance staff. Preference in hiring would be given to the local community and the Shoshone tribes in the NPS operations. If necessary, provisions favoring Shoshone tribal
Alternative 3

members could be written into the enacting legislation, using existing authorities for the Bureau of Indian Affairs as a model.

Those same authorities could also be used in the staffing of the Shoshone cultural center by one or more of the tribes. A paid Shoshone staff person would oversee the operations of the Shoshone aspects of the cultural center and interact with the NPS interpretive staff.

Volunteers could be used in either the visitor center or the cultural center, but the operations of these facilities would not depend on the presence of volunteers.

Cultural Landscape

Protection of the cultural landscape would be accomplished through design guidelines reinforced with positive economic incentives. They would be developed by the heritage commission and the NPS. The two entities would also work with Franklin County to establish the guidelines.

Boundary

The boundary would be configured to protect the cultural resources and the cultural landscape as seen from bluffs to the west and north of the site. This area encompasses approximately 1100 hectares (2725 acres) of land.

The land proposed for fee simple ownership by the National Park Service would be approximately 8-14 hectares (20-35 acres) for the visitor and cultural center, and parking. Other land within the designated boundaries would remain in private ownership. An easement of 58 hectares (144 acres) on the massacre field would be acquired in order to extend historic preservation law to those resources and Shoshone access to the field. Compatible agricultural use could still continue on the field. The use of any other property for waysides, parking, trails and/or the Shoshone Memorial would also be acquired through the purchase of easements.

The National Park Service would use the willing seller/willing buyer method to purchase fee simple and easement interests in land. The service would also accept donations and use land exchange techniques to acquire interest in land from willing parties.

IMPACT ANALYSIS

As stated in the section on the environmental consequences of all alternatives, this special resource study is very conceptual in nature, and this environmental analysis presents only an overview of the potential impacts relating to the propose actions for each alternative. If the Bear River massacre site is designated a unit of the national park system, more specific management plans would be undertaken. Future planning efforts would evaluate specific environmental impacts of the actions proposed in this alternative. In the process, mitigative measures would be analyzed and developed for public comment.
Impacts on Cultural Resources

As in Alternatives 1 and 2, there is a potential for the disturbance of human remains and archeological resources at the proposed massacre field and hot springs waysides and the Shoshone Memorial. As described in previous alternatives, design would be accomplished so as to avoid all ground disturbance. Only if ground disturbance becomes unavoidable would limited archeological testing be undertaken in any proposed location of the wayside exhibit structures, the memorial, parking and road adjustments.

A memorandum of agreement (MOA) would be entered into between the NPS and the Shoshone tribes to establish procedures should human remains be found during any ground-disturbing activities on the massacre field or elsewhere within the designated site boundaries. As stated in the previous alternatives, any ground-disturbing activities, including archeological investigations, would be undertaken in the presence of a Shoshone monitor, and would conform to the stipulations of the MOA. Furthermore, all such investigations and ground-disturbing activities would be subject to consultation under the National Historic Preservation Act. Because conservation easements would be acquired on the massacre field, the Native American Grave Protection and Repatriation Act would also govern the treatment of human remains. If human remains were found, the excavation would be stopped immediately, and the procedures of the MOA would be followed.

This alternative allows for more tribal involvement than in Alternative 1, and a similar amount of involvement to that in Alternative 2, with one important difference. The tribes and the National Park Service, as a federal agency, enjoy a special government-to-government relationship as a result of the many treaties, agreements, and Executive orders that have been negotiated with them. This relationship was recently reaffirmed in a memorandum dated April 28, 1994 from the President of the United States to all federal department and agency heads directing them to consult with tribes about actions that could affect them, especially in matters of concern to their cultural heritage. This relationship automatically establishes a mechanism for the Shoshone to voice their concerns and to assure their concerns will be heard if the area is designated a unit of the national park system, as in this alternative.

In addition, Shoshone involvement would be through the MOA for the treatment of human remains and archeological materials, through their representation on the heritage commission, and through their participation in the cultural center. Shoshone people would also be consulted in the preparation of any interpretive media at the visitor center and in the waysides. In addition, Shoshone people would be given special hiring preference through legislation designating the site as a unit of the national park system. They would also be allowed access to the massacre field for the conduct of appropriate ceremonies and religious practices through this legislation.

A number of cultural resource studies are proposed in this alternative to provide information necessary to manage and protect the resources, and to properly evaluate impacts of proposed actions in future environmental analyses of management plans that would follow designation of a unit of the national park system. These studies would be conducted in consultation with the Idaho state historic preservation officer, as required by sections 110 and 106 of the National Historic Preservation Act, and the Shoshone tribes.

As in Alternative 2, Shoshone cultural advisors would be consulted in all studies related to the Shoshone, and cultural sensitivities about the studies would be respected. The collection of oral histories and other ethnographic information, in particular, would conform to confidentiality concerns of the Shoshone people.

In addition, landowners' and residents' permission to conduct field surveys would always be sought before entering private land.

The visitor and cultural center would be located away from the edge of the bluff, partially to avoid impinging on the cultural landscape as seen from the massacre field. If it is not possible to accomplish this goal, then appropriate design, screening and other mitigative measures would be developed.

Modern intrusions, in particular the West Cache Irrigation Canal and the highway, and the proposed highway, massacre site, and hot springs waysides would be screened with appropriate vegetation to mitigate their impact on the scenic qualities of the landscape. From the massacre field, the canal's eastern embankment appears as if it were a part of the slope of the surrounding bluffs, so does not appear intrusive. The canal runs along the very base of Cedar Ridge, and appears only as a small stream from the top of the ridge. It does not constitute a major intrusion on the scene from that viewpoint. It is much more noticeable from the Battle Creek overlook, and there would probably be no measures that could mitigate its impact on the cultural landscape as seen from that location.

Impacts on Natural Resources

Impacts on natural resources would be similar to Alternative 2 except that easements on the massacre field might be maintained in a more natural condition. This would result in a more heterogeneous natural landscape with diverse habitats that would benefit wildlife. A small area of wetlands within the massacre field would be expected to recover to more natural conditions.

The visitor and cultural center, possible new road construction, the Shoshone Memorial, and the waysides at the hot springs, massacre site, highway, would be located on previously disturbed agricultural lands and would not adversely impact biologic diversity, wetlands or floodplains. A visitor and cultural center sited on the bluff overlooking Battle Creek or on Cedar Bluff would not effect floodplains or wetlands along Bear River.

All trails near the massacre site and facilities at either the Battle Creek or Cedar

85

86
Bluff Overlooks would be located to avoid the geologic hazards near the slopes of Bear River and Battle Creek.

Agreements would be negotiated between the National Park Service and the West Cache Irrigation Canal authorities to determine appropriate rights and responsibilities for the structure as it passes through the massacre field area. If any transfers of responsibility were required, examinations and cost estimates for repairs would be prepared and utilized during the negotiations.

In accordance with National Park Service Special Directive 87-4 (Dams and Appurtenant Works -- Desk Manual for Maintenance, Operation and Safety) and National Park Service Guideline 40 (Dams and Appurtenant Works, Maintenance, Operation and Safety, 1983) a survey would be performed for stream flow control structures that could affect park safety, operations, maintenance or resources. This survey would include the diversion structure for the West Cache Irrigation Canal, which is located approximately one kilometer (3/4 mile) northeast of the landmark boundary. All such structures are required to be included in the NPS Inventory of Dams and have an annual inspection and maintenance program, even those outside of proposed boundaries.

Although no hazardous materials were observed or reported during visits to the area, the National Park Service would conduct a level 1 pre-acquisition survey to verify that there are no hazardous materials present, prior to any land acquisition.

Impacts on Visitor Experience

This alternative would provide more opportunities to visit, understand and appreciate the Bear River massacre with minimal distractions from current land uses and new development. Trails near the massacre site, the massacre wayside, an additional wayside near the hot springs, and a picnic area would enhance the interpretive opportunities at the site.

Impacts on Socioeconomic Environment

The benefit to the local economy would be similar to Alternative 2. More building materials and labor would be necessary to build the additional wayside, trails, and parking lot. More interpretive opportunities could result in an increase in visitation to the area and more sales taxes and revenues to benefit the local economy. Businesses along travel routes would also benefit from increased tourist volumes.

At their own discretion, private landowners would remain on their land and use it for compatible purposes, but there would be more restrictions on the types of uses than in Alternatives 1 and 2. Covenants and zoning restrictions would be enforced by local government. Trespass on private land would be reduced with additional signs and fencing. Covenants and zoning restrictions would help protect FM 1520 from being converted to non-agricultural uses.

Approximately 58 hectares (144 acres) of conservation and scenic easements would be purchased to protect the massacre site. Another 8-14 hectares (20-35 acres) would be purchased in fee simple to build the

Alternative 3

visitor and cultural center at either the Battle Creek or Cedar Bluff Overlook areas. The development rights of the remaining 990-1015 hectares (2450-2510 acres) of land within the boundaries would also be purchased. The landowners would be compensated for the fair market value of their land. The latter action would remove a small amount of prime farmland from agricultural production and reduce local agricultural revenues. On the other hand, the purchase of development rights would guarantee that most prime agricultural land would remain in production, and not be lost to subdivision or other commercial enterprises in the future.

This alternative protects private landowners' rights through their representation on the heritage commission, its strong involvement in devising scenic protection and design guidelines, and in the financial compensation offered to landowners created by federal land exchange or through donation from a willing seller. The location is to be determined by a willing owner. Appropriate fencing and signage of private land adjacent to the visitor and cultural centers, waysides, Shoshone Memorial and trail would be provided.

Impacts on Transportation

Impacts from traffic would be similar to Alternative 2. An additional road may need to be built to the visitor and cultural center and another wayside and parking lot would be constructed at the hot springs. These would result in more traffic near private property and increased road maintenance costs.

FEASIBILITY

This alternative recommends boundary configurations of sufficient size to ensure long-term protection of resources, through the acquisition of conservation easements to extend national historic preservation law to private property within the boundaries. It is also appropriately sized to accommodate public use.
The concerns of Shoshone people living in Idaho, Wyoming, Utah and Nevada would be given the attention that a national perspective could provide, unlike the No Action alternative and Alternatives 1 and 2.

Cost Considerations

Operational costs would be similar to those described in Alternative 2, except that the operation and staffing of the cultural center would be borne by one or more of the Shoshone tribes, instead as a cooperative effort between the tribes and pioneer descendants associations.

Project-related costs would consist of the design and construction of the visitor/cultural center and attendant parking. If the visitor and cultural center is located on the Cedar Bluff, approximately 0.8 kilometers (one-half mile) of gravel road would require improvement and an additional 0.8 kilometers (one-half mile) of new road would be constructed. If the visitor and cultural center is built on the Battle Creek Overlook, as much as 1.6 kilometers (one mile) of new road would be required. About 1.6 kilometers (one mile) of Hot Springs Road would also require improvement. Additional project costs would also include the design and construction of wayside exhibits, the redesign of the highway wayside and provision of small pull-outs at the massacre site and hot springs waysides, and possibly parking at the Shoshone Memorial. The design and construction of the Shoshone Memorial is also considered a cost of this alternative. Total development costs are estimated between $9,100,000 and $11,600,000.

Approximately 8-14 hectares (20-35 acres) of land would be acquired fee simple for the construction of a visitor and cultural center. The purchase of access, conservation and scenic easements may be required at all four waysides, and Shoshone Memorial. Easements would be required for the improvement and/or construction of roads to the proposed visitor and cultural center site for a total of between 80 and 95 hectares (200-235 acres) of easements. Development rights would also be purchase for the remaining 990 to 1015 hectares (2450-2510 acres) in the historic reserve boundary.

The funding of cultural resource inventory studies would cost about $400,000.

All funding for this proposal would be borne by the NPS. Some project and cultural resource inventory funding could be provided through special legislation and historic preservation grants to NPS partners, possibly supplemented with private donations.

Resource Protection

The massacre field would be protected by federal acquisition, thereby assuring that all federal historic preservation law could be applied including all provisions of the National Historic Preservation Act and the Native American Graves Protection and Repatriation Act. As all lookouts would be utilized, a somewhat larger cultural landscape would be defined than in Alternatives 1 and 2. On-site park staff would be available to constantly monitor the condition of resources.
The same cultural resource studies proposed in Alternative 3 would be conducted in this alternative in order to provide information necessary to manage and protect the resources, and to properly evaluate impacts of proposed actions in future environmental analyses. In addition, a cultural landscape report would be required. This latter study is a more detailed investigation undertaken when the restoration of a cultural landscape is contemplated.

**VISITOR EXPERIENCE**

The objectives of this alternative would be to allow the visitor to be near the sacred ground and to be able to see what the landscape looked like at the time of the massacre. The stories of individual events during the massacre could be told in the vicinity of their occurrence to provide easiest comprehension.

**Highway Wayside**

The basic story of what happened on the day of the massacre would be told at a highway wayside in order to orient the visitor passing through the area. This wayside would also serve as a trailhead location. To prevent visitors from crossing the highway to reach the trailhead, this new wayside would be located on the west side of the road somewhere north of the intersection between U.S. highway 91 and Hot Springs Road. Interpretive displays would include an orientation map and a message urging visitors to respect private property and the sacred nature of the massacre field. Directions would be provided on how to access other waysides, trails and the visitor center.

**Massacre Field Trail and Waysides**

The highway wayside would also provide a departure point for a trail skirting the massacre field in the vicinity of McGarry's line, then climbing onto a trail built on top of the irrigation canal. This canal would be covered and landscaped to keep it from intruding on the cultural landscape. Visitation would be structured with respect paid to the sacred nature of the ground and the private property in the vicinity. The trail would allow visitors to be near the massacre field, but not directly on it, thus respecting the sacred quality of the area.

Additional waysides would be placed along the trail and at the hot springs to provide interpretation of individual events that occurred during the massacre, and to present some of the Shoshone versions. Emphasis for interpretation would be placed upon specific events that took place on the field, the Shoshone experience of the massacre, and details of how they used the resources and the landscape. The sacred ground message would be emphasized.

**Landscape Restoration**

With the presence of the massacre field interpretive trail, visitors would have an opportunity to spend more time near the place where the massacre occurred than in any of the previous alternatives. There they would gain an appreciation of how the landscape and vegetation influenced both Shoshone use of the local resources, and the events of the massacre itself. With a
The landscape restoration would also mitigate the adverse effects perceived by some Shoshone people that the agricultural use of the massacre field is disrespectful of the Shoshone people who died there.

Restoration of the pre-massacre landscape would consist primarily of removing non-native plant species and farm structures, and encouraging the growth of willows and other native plants in appropriate areas of the field.

Landscape restoration would conform to National Park Service Management Policies that "restoration is essential to public understanding of the cultural associations of a park" (NPS-2, 1988). Furthermore, it would be undertaken only if the cultural landscape report indicated that sufficient data existed to permit restoration with minimal conjecture.

To enlarge upon the visitor experience in this regard, economic incentives, such as the purchase of scenic easements, would be provided to encourage nearby landowners to allow their land to turn a pre-massacre vegetation cover.

Shoshone Memorial
A memorial commemorating the unburied Shoshone dead left after the massacre would be placed on or near the massacre field. Besides acknowledging the tragedy of the event, this memorial would provide an additional emotional connection to the massacre event. As described in Alternative 3, the location and design would be developed by NPS in partnership with the Shoshone people. The memorial may or may not be placed adjacent to the massacre site wayside, depending on the wishes of the Shoshone people.

Visitor Center
In order to present the complicated social and historical context for the massacre, as well as differing versions of the massacre event itself, a visitor center would be located on one of the bluffs overlooking the massacre field (the Soldier’s Overlook, Cedar Bluff or the Battle Creek Overlook). It would include exhibits, cultural demonstrations, a variety of interpretive media, an auditorium, and book sales. Emotional connection to the event would be enhanced through audio-visual media and personal services, where the visitor could see and hear descendents of survivors tell their family stories. Because it is within a short walking distance of being able to see the massacre site, interpretation at the visitor center would not have to duplicate some of that undertaken at the highway wayside and near the massacre site. It would also be a place to learn about related places, especially those associated with events leading up to the massacre. The visitor center would also provide space for administration offices.

To demonstrate the equal emphasis on interpretation of Shoshone, settler, emigrant, miner, and soldier versions of the massacre event, interpretive panels would be bilingual, in both Shoshone and English.

Overlook Waysides
A trail would lead from the visitor center to an overlook, where an overview could be obtained. A wayside would provide a general overview of the massacre site, and help the visitor understand why the Shoshone were encamped at that location, how big the village was, what the troop movements were, and what escape routes were used.

One additional overlook wayside would be provided at another overlook to provide a different perspective on the massacre. Parking would be available away from the bluff, with access by trail.

Cultural Center
A cultural center devoted to portraying the lifeways of the Shoshone people would be provided in conjunction with the visitor center. It would probably be located in a structure connected to the visitor center, but clearly separate from it. In this alternative, the cultural center would be devoted entirely to depiction of Shoshone culture and not shared with other cultural demonstrations. The facility would become the repository for the Shoshone oral history of the massacre. The center would have a Shoshone name and would be operated by Shoshone people.

Roads and Trails
The visitor experience on site would be a combination of trails and personal vehicles. Visitors, if they wished, could view the entire site on foot. Only those off-highway roads that provide access to overlooks or waysides would be necessary.

A parking lot would be required at the highway wayside and head of the covered canal interpretive trail beside the massacre field. With the cooperation of the Daughters of the Utah Pioneers and the Idaho Department of Transportation, the existing parking lot at the DUP monument would be redesigned to accommodate short visits, and to eliminate a conflict of use with nearby property owners. Smaller parking lots would be provided at the hot springs waysides, and possibly the Shoshone Memorial. In addition, a larger parking lot would be necessary at the visitor center site.

Some upgrading of Hot Springs Road from its intersection with U.S. highway 91 to the hot springs may be necessary to handle visitor traffic.
Additional upgrades and possible new construction of roads would be necessary to the visitor center and an additional overlook.

An interpretive trail would be constructed on top of the existing irrigation canal, on a structure that covers the canal. This trail would provide excellent views of the massacre field without impinging on the sacred ground. It would permit the visitor to be close to the massacre ground without touching it. Other, smaller trails may feed off the primary trail leading to the hot springs area or to routes taken by survivors who escaped the massacre. Short trails would also be constructed from the visitor center to an overlook, and from a parking lot to another overlook on one of the other bluffs in the area.

**SHOSHONE ACCESS**

As would be provided for in the legislation creating the park unit, and once the massacre field has been acquired in fee simple, Shoshone people would be able to go onto it to conduct appropriate ceremonies and religious practices without first seeking permission. Private landowners would not be affected by this access, because the land would be owned in fee simple by the National Park Service.

**MANAGEMENT**

The site would be a designated federal site under National Park Service management. Partnerships would be developed with the Shoshone tribes and the landowners through a management plan prepared after the legislative designation of the site. The service would meet on a regularly scheduled basis with both the landowners and the tribes, and under conditions stipulated in the management plan. The service would seek advise and input from the tribes on matters pertaining to cultural resource management and interpretation. NPS would routinely seek advise and input from the landowners on matters related to their interests, especially in the development and management of scenic and design guidelines.

The National Park Service would be responsible for resource protection, research, development of interpretive facilities, park planning, site management, visitor contact, and facilities maintenance.

All staffing would be provided by the National Park Service, except at the cultural center, which would be staffed by Shoshone people. In addition, some other NPS staff members may also be Shoshone.

Preference would be given to the hiring of Shoshone tribal members in the cultural center, with the eventual goal of having the entire cultural center being Shoshone. The authorities for accomplishing this goal would have to be established through the enabling legislation creating the park unit. Models for this legislation could be drawn from existing authorities for the Bureau of Indian Affairs in the hiring of people whose jobs contribute directly to the welfare of the Shoshone people.

**Cultural Landscape**

Protection of the cultural landscape outside the massacre field would be established through scenic and design guidelines reinforced with economic incentives, such as the purchase of easements. The covenants and guidelines would be developed by the National Park Service in cooperation with the landowners and Franklin County government. New development not consistent with agricultural pursuits (e.g., subdivision housing, RV parks, river running) would be prohibited within the cultural landscape. Design guidelines would protect the cultural landscape, but a landowner’s ability to adapt to changing technologies would not be curtailed, except in those instances where the technology clearly impinged on the values of the cultural landscape.

**Boundary**

The boundary would include all of the study area. It would be configured to protect the cultural resources in the NHL, additional cultural resources outside the NHL, and a cultural landscape. The cultural landscape is the same as in Alternative 3, and would be determined by the locations of a proposed visitor center overlook and one additional overlook. The boundary as a whole would be somewhat larger than in Alternative 3.

NPS fee ownership would be proposed for the massacre field (58 hectares or 144 acres) and a small parcel for the visitor center, cultural center and attendant parking lots (8-14 hectares or 20-35 acres). Other property could remain in private ownership, but new development would be restricted through NPS acquisition of development rights in order to protect the cultural landscape. A provision would also be made to allow the purchase, trade, or acquisition of easements of other properties from willing sellers within the historic site boundary.

The remaining 1175 to 1200 hectares (2900-2975 acres) of land within the boundary of the historic site would be acquired as conservation and scenic easements.

The National Park Service would use the willing seller/willing buyer method to purchase fee simple and easement interests in land. The service would also accept donations and use land exchange techniques to acquire interest in land from willing parties.

**IMPACT ANALYSIS**

As stated in the section on the environmental consequences of all alternatives and in Alternative 3, this special resource study is very conceptual in nature. This environmental analysis presents only an overview of the potential impacts relating to the proposed actions for each alternative. If the Bear River massacre site is designated a unit of the national park system, more specific management plans would be undertaken. Future planning efforts would evaluate specific environmental impacts of the actions.
proposed in this alternative. In the process, mitigative measures would be analyzed and developed for public comment.

Impacts on Cultural Resources

As in Alternatives 1 and 2, there is a potential for the disturbance of human remains and archeological resources at the proposed hot springs wayside, the Shoshone Memorial, and from the improvements to Hot Springs Road. Additional disturbances to these types of resources could occur at the west highway wayside and the trail. It is anticipated that the sensitive design and location are likely to mitigate possible effects of these actions. Under the auspices of the National Historic Preservation Act, limited archeological testing in any proposed location of the wayside and memorial would precede the design of parking, exhibit structures, memorial and road adjustments.

As recommended by the Native American Grave Protection and Repatriation Act, a memorandum of agreement (MOA) would be entered into between the NPS and the Shoshone tribes to establish procedures should human remains be found during any excavations on the massacre field and in other areas within the designated unit. A Shoshone monitor would be present during any archeological testing or other ground disturbance. If human remains were found, the excavation would be stopped immediately, and the procedures of the MOA would be followed.

The highway wayside, exhibits, parking and trailhead would be placed outside the massacre field.

This alternative allows for more tribal involvement than in any of the other alternatives. As stated in Alternative 3, the formalized government-to-government relationship between the National Park Service and the Shoshone tribes guarantees the tribes access to NPS decision-making processes. In addition, their involvement in resource management issues would be through the MOA for the treatment of human remains, through their representation at regularly scheduled meetings established in a management plan, and through their staffing and oversight of the cultural center. Shoshone people would also be consulted in the preparation of any interpretive media at the visitor center and in the waysides. Finally, Shoshone people would be given special hiring preference through the enabling legislation designating the site as a unit of the national park system.

As in Alternative 3, a number of cultural resource studies are proposed in this alternative, in order to provide information necessary to manage and protect the resources, and to properly evaluate impacts of proposed actions in future environmental analyses for the management plans that would follow designation of a unit of the national park system. These studies would be conducted in consultation with the Idaho state historic preservation officer, the Shoshone tribes, and in cooperation with landowners and residents as described in Alternative 3.

Restoration of the pre-massacre landscape would only be undertaken upon completion of a cultural landscapes inventory and a cultural landscape report as defined in the

Alternative 4

National Park Service Cultural Resources Management Guidelines (NPS-28, 1994). These studies would determine whether sufficient data exist to permit restoration with minimal conjecture. TNS NPS guidelines stipulate that landscapes can only be restored if they meet certain criteria. Particularly applicable are criteria that the recreation would not affect significant cultural landscapes of a later period, and would not create a false sense of history by combining later landscape features with the created landscape.

If, for instance, it was discovered that existing structures on the massacre field possessed historic significance separate from the massacre event, then the need for landscape restoration may be re-evaluated. As stipulated by regulations and agreements pertaining to the National Historic Preservation Act, these studies would be conducted in consultation with the Idaho state historic preservation officer and the Shoshone tribes.

It would not be possible to remove the West Cache irrigation canal from the massacre field, but the use of the canal as a trail and lookout onto the massacre field would mitigate its adverse impact on the pre-massacre landscape by being literally under the feet of the visitor instead of in the landscape being viewed. The use of appropriate landscaping materials would also be used to mitigate its visual impact on the cultural landscape, as viewed from one of the proposed overlooks. The canal itself would be further interpreted as the heritage of the massacre, because its occurrence opened up the area to farming.

The West Cache Irrigation Canal has not been evaluated for its historic significance. Given the fact that it and/or its predecessors have served the agricultural needs of the area for 85 years, it could be eligible to the National Register of Historic Places in its own right. Before the canal is covered, it would be evaluated by the criteria established by the national register. If found to be significant, the effects of this proposal on those qualities would be evaluated and mitigative measures would be developed in consultation with the Idaho state historic preservation officer and the Advisory Council on Historic Preservation.

As in Alternatives 2 and 3, the impacts of U.S. highway 91 and Hot Springs Road on the cultural landscape would be mitigated through appropriate vegetative screening.

Impacts on Natural Resources

This alternative would provide for the protection of natural resources by returning portions of the landscape to its pre-massacre condition. The trails, waysides, and visitor and cultural centers at either the Soldier Overlook, Battle Creek Overlook or the Cedar Bluff Overlook would be sited to avoid any local geologic hazards. Siting of this facility, design considerations and mitigation for the geologic hazards would be identified during later planning stages.

Land acquired in free simple or through conservation easements within the NHL from willing sellers would be maintained or restored to more natural conditions. This action would result in a more heterogeneous natural landscape with diverse habitats that
would benefit wildlife including the pygmy rabbit and northern sagebrush lizard. Wetlands, riparian communities, and floodplain habitat would also be expected to recover to more natural conditions benefiting dependent wildlife. Bald eagles and peregrine falcons would benefit from the increased diversity and abundance of prey as vegetation in the NHL recovered to more natural conditions over time. Runoff from restored habitat would carry less agricultural related pollutants into Battle Creek and the Bear River.

Impacts from development and improvement of facilities under this alternative would be similar to Alternative 2. In particular, waysides at the hot springs, massacre site, highway and visitor center and possible new road construction would be located on previously disturbed agricultural lands and would not adversely impact biologic diversity, wetlands or floodplains. A foot trail constructed on a new structure covering the irrigation canal would have the positive effect of removing a visual intrusion that currently detracts from the visual qualities of the massacre site. The visitor and cultural centers sited on any of the bluffs overlooking the site would not effect floodplains or wetlands in along Bear River.

As in Alternative 3, agreements would be negotiated between the National Park Service and the West Cache Irrigation Canal authorities to determine appropriate rights and responsibilities for the canal as it passes through the massacre field area. Also as in Alternative 3, a survey would be performed for all stream flow control structures that could affect park safety, operations, maintenance or resources.

As in Alternative 3, the National Park Service would conduct a level 1 pre-acquisition survey to verify that there are no hazardous materials present, prior to any land acquisition.

**Impacts on Visitor Experience**

This alternative would provide excellent opportunities to visit, understand, and appreciate the Bear River massacre while reducing some distractions from conflicting land uses and development. Restoration of portions of the area to its pre-massacre landscape would eliminate many of the visual distractions that are currently present in the area, and which adversely affect the quality of the longer and more intimate visitor experience envisioned by this alternative. Protection of existing scenic resources would be accomplished through local government zoning, covenants and design guidelines enforced through conservation and scenic easements. Besides the previously mentioned waysides and trails, three scenic overlooks, and the visitor and cultural centers would be built to enhance the visitor’s experience. A trail network linking the waysides, overlooks, massacre site and visitor and cultural centers would provide the visitor the greatest opportunity of any of the alternatives to better understand the historical event. Interpretive media at the National Historic Site would place the massacre into its proper historical context and would provide the greatest chance to learn about the historic and present Shoshone culture. Regional recreational activities would also be promoted and publicized.

**Impacts on Socioeconomic Environment**

This alternative would result in the greatest benefit to local and regional economies. There would be increased sales and tax revenues, employment of several paid staff at park facilities, and additional annual operating expenditures at the visitor and cultural centers. Associated visitor related facilities such as an additional hotel, restaurant, service station and convenience store would also benefit the local economy. Facilities along travel routes to the historic site would also benefit from increased tourist volumes.

This alternative offers landowners the flexibility to remain on their land and use it for compatible purposes, but with more restrictions than the other alternatives. To protect the scenic quality of the site, scenic and design guidelines would be developed in cooperation with the landowners, either through a series of meetings with all landowners or through an organization established by the landowners to protect their interests. Franklin County would also be involved in the development of the guidelines, as regulatory control through zoning and covenants would remain at the local level. Reduced trespass on private land would be offered through signs and fencing. Conservation and scenic easements would protect prime farmlands from being converted to non-agricultural uses.

Through time, natural vistas would be enhanced as the massacre site is acquired and restored to its pre-massacre condition. As property is acquired over the long term, private landowners would be compensated for the fair market value of the land. Because the massacre field would be removed from agricultural production, it would have an adverse impact on prime farmland. There would also be a minor loss of property tax revenues and agricultural related employment as this land is purchased and converted to park land.

This alternative protects private landowners’ rights through their representation on the landowner’s heritage commission, its strong involvement in devising and enforcing scenic protection and design guidelines, and in the financial compensation offered to compensate for hardships attendant upon compliance with guidelines. As in the other alternatives, signs and fencing to protect private property would be provided upon request. Visitor access would be structured so as to avoid all private property. In addition, interpretive media would stress the importance of respecting landowner property rights and the sacred ground.

Scenic and design guidelines would be developed by the NPS in partnership with the landowners. The purchase of conservation and scenic easements throughout the historic site would ensure that no new development occurred that did not conform to the guidelines (e.g., subdivision housing, RV parks, river running). Existing agricultural pursuits and future changes in conformance to new technology would be allowed, so long as they did not violate the guidelines.
Cost Considerations

The operational costs of this alternative would be somewhat more than for Alternatives 2 and 3, due to additional facilities that would need routine maintenance. Operational costs of the cultural center would be borne by the National Park Service, but the center would be staffed with Shoshone people. These costs are estimated at $450,000 a year.

As in Alternatives 2 and 3, project-related costs would include the design and construction of the visitor and cultural centers and attendant parking. If the visitor center or additional overlook is located on the Cedar Bluffs, approximately 0.8 kilometers (one-half mile) of gravel road would require improvement and 0.8 kilometers (one-half mile) of new road would be constructed. If the facilities are built on the Battle Creek Overlook as much as 1.6 kilometers (one mile) of new road would be required. If they are located on the Soldier’s Overlook, approximately 3.2 kilometers (two miles) of gravel road would need improvement.

Project costs would also include the design and construction of five wayside exhibits and a parking lot/trail head on the west side of the highway, the redesign of the DUP/DOT parking lot, provision of small pull-outs at the hot springs wayside and possibly a parking lot or pullout at the Shoshone Memorial. The design and construction of the Shoshone Memorial would also be considered a cost of this alternative. Development costs for Alternative 4 are estimated between $11,800,000 and $14,400,000.

The 58 hectares (144 acres) comprising the massacre field would be acquired in fee simple. Approximately 8-14 hectares (20-35 acres) of land would likewise be acquired fee simple for the construction of the visitor and cultural centers. In addition, the purchase of access easements might be required at all five waysides and Shoshone Memorial. Scenic, conservation, and road easements would be purchased for the remaining 1175 to 1200 hectares (2900-2975 acres) of land within the historic site boundary.

The costs of cultural resource inventory studies would be about $500,000.

As in Alternative 3, all funding for this proposal would be borne by the NPS. Some project and cultural resource inventory funding could be provided through special legislation, possibly supplemented with private donations.

OTHER ALTERNATIVES CONSIDERED

The study team considered two other alternatives. Both additional alternatives would have provided similar physical facilities as proposed in Alternative 4. The principle differences of these alternatives from the ones described in some detail here were in the management, ownership and acquisition of land.

Traditional National Historic Site

Under this alternative, the National Park Service would purchase all of the land within the designated boundaries in fee simple and attempt to restore the entire cultural landscape to a condition approximating its appearance in the years immediately before 1863. This alternative was rejected for several reasons:

1) Most critical resources can be protected adequately under the alternative protection schemes outlined in Alternatives 3 and 4, through the acquisition of conservation and scenic easements, and through the National Historic Preservation Act, which ties the protection of resources to federal undertakings. The massacre field and any human remains that lie there can be protected by acquisition of easements, as in Alternative 3, or fee simple acquisition of just the massacre field, as in Alternative 4, without having to acquire all land within the greater cultural landscape.

2) By viewing the massacre field and the surrounding landscape from any of the overlooks described in the four alternatives, the visitor can gain an appreciation of why the Shoshone were encamped at this location and the sequence of events, even without reconstructing the entire pre-massacre landscape. Modern intrusions, because they are agricultural in nature, or
are long and linear, only slicing through the greater landscape (such as the highway and canal), are easily screened. It is not necessary to an appreciation of the event to fully reconstruct the landscape.

3) The costs of acquisition in fee simple of all 1250 hectares (3085 acres) within the larger cultural landscape would be considerable.

4) The removal of 343 hectares (850 acres) of prime agricultural land from agricultural use would constitute an adverse impact.

5) It was not considered feasible to acquire all land from the 72 land-owners within the larger cultural landscape within a reasonable length of time.

Shoshone Tribal Park

This alternative was voiced as a possibility during meetings with Shoshone tribal council meetings and with individual Shoshone tribal members. Some Shoshone people expressed the strong belief that the land once belonged to the Shoshone, it was unjustly taken from them, and it should be returned. Because it is the place of death for so many of their ancestors, and because the massacre was a pivotal event in the history of at least four Shoshone tribes, NPS acknowledged that this alternative should at least be examined.

Under a tribal park alternative, interpretation of the massacre event would be oriented exclusively to the Shoshone viewpoint, and the purpose of the park would be primarily commemorative of the Shoshone people who were killed. The protection of the cultural landscape and other protection measures, facility development, and acquisition would be similar to Alternative 4. Instead of NPS management, one of the four tribes or a cooperative effort between the tribes would administer the site. The cultural center would be dedicated to preserving and interpreting all aspects of Shoshone cultural heritage, not just those associated with the massacre.

This alternative was rejected for the following reasons:

1) A paramount stipulation of a Shoshone people in a tribal park alternative would be that the land be owned by the Shoshone. As in the Traditional National Historic Site alternative above, however, all resource protection and visitor experience goals can be accomplished through Alternatives 2, 3, and 4 without acquisition of all land within the designated site boundaries.

2) The land is currently in private ownership. Tribal ownership would not accomplish the goal established by the vision statement of not unduly affecting the lives of people who now own and use the land.

3) NPS believes that a balanced presentation of all sides of the story leading up to and including the massacre event are crucial to providing all visitors with an understanding of why culture conflict has sometimes ended so tragically. Given tribal sensitivities to the massacre, it would be as difficult for them to present the soldier, settler, emigrant and miner stories as it has been for the descendants of the settlers to present the Shoshone story.

4) The tribes do not believe that they have the funding resources available to acquire the land, and to build and operate the facilities.

5) There is currently a lack of unity among the four tribes on the appropriate vision, goals, and management strategy for a tribal park.

<thead>
<tr>
<th>Impact Topic</th>
<th>No Action</th>
<th>Alternative 1 Historic Site</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cultural Resources</td>
<td>No protection offered to cultural resources from private undertakings on private land. No design guidelines or zoning to control new development. No protection of sanctity of massacre field. No recognition of Shoshone dead. No new impacts beyond these existing ones.</td>
<td>There may a potential for impacting massacre field and human remains from construction of wayside exhibits, road improvements, and pullout; these would be mitigated through sensitive design and procedures of an agreement with the SHPO and tribes. Design guidelines may be difficult to enforce. Little tribal involvement.</td>
</tr>
<tr>
<td>Natural Resources</td>
<td>No new adverse impacts except for slight increases in dust and vehicle emissions. Landslides and slumping will continue to occur along Battle Creek and Bear River.</td>
<td>Same as No Action Alternative except for minor vegetative disturbance, air pollution emissions, and noise caused by road and parking improvements.</td>
</tr>
<tr>
<td>Visitor Experience</td>
<td>Visitation would increase with normal population growth in region.</td>
<td>Additional opportunities to understand historical event. Increased visitation in Preston and at the massacre site.</td>
</tr>
<tr>
<td>Socioeconomic Environment</td>
<td>No additional economic benefit to community.</td>
<td>One time benefit to local economy from construction activities; slight increases in sales taxes, revenues, one additional job.</td>
</tr>
<tr>
<td>Transportation</td>
<td>Slight increases in traffic on Hot Springs Road. No road improvements.</td>
<td>Slight increases in traffic on Hot Springs Road which may cause traffic congestion and noise.</td>
</tr>

consultation

coordination
CONSULTATION AND COORDINATION

As part of the scoping and continuing consultation with the public and federal, tribal, state and local governments, a series of meetings and correspondence were undertaken. Agencies and individuals are listed in the section entitled "Study Team and Preparers," which follows this list of consultation and coordination meetings.

July 13-15, 1993: Meetings in the Preston, Idaho area with a number of historians and other people interested in the study (most of whom later attended Focus Group meetings) to begin scoping issues. The state historic preservation officer (SHPO) was in attendance.

April 26, 1994: Consultation meetings with Vice Chairman Mae Parry, Northwestern Band of Shoshoni Indian Nation and Genevieve Edmo, Chairman of the Cultural Committee, Shoshone-Bannock Tribes at Fort Hall Reservation.

May 11, 1994: Consultation meeting with Tribal Chairman and staff at the Shoshone-Paiute Reservation at Duck Valley, Nevada, to inform them of the nature and scheduling of the study.

June 13, 1994: NPS sent written requests to the U.S. Fish and Wildlife Service (USFS) and the Idaho Department of Fish and Game for lists of federal and state endangered, threatened, listed, candidate, and/or proposed species which may be present in the Bear River Massacre Site National Historic Landmark.

June 24, 1994: The Idaho Department of Fish and Game replied to the NPS request for a list of state threatened, endangered, or candidate species.

July 1, 1994: USFS replied to the NPS request for a list of federal endangered, threatened, listed, candidate, and/or proposed species.

July 12, 1994: Meeting with sixteen owners and residents of land in the national historic landmark boundaries, the Idaho SHPO and Valerie Watkins, representing United States Senator Larry Craig, to continue scoping issues and to answer questions.

July 13-14, 1994: Meeting of the Focus Group to "brainstorm" purpose, significance, vision, and some solutions for eventual integration into alternatives. The SHPO was in attendance.

August 17, 1994: Consultation with the full tribal council of the Shoshone-Bannock Tribes at Fort Hall Reservation to continue scoping issues and to solicit ideas for incorporation into the study.

September 28, 1994: Presentation of the draft range of alternatives to the Idaho SHPO and staff, and the Idaho State Department of Parks and Recreation.

October 11, 1994: Meeting at Fort Washakie, Wyoming, with the tribal business council of the Wind River Reservation to introduce them to the study.

February 27-28, 1995: Meetings with council and tribal members of the Northwestern Band of Shoshoni Nation to outline the general range of alternatives, and to solicit ideas for incorporation into the study. The SHPO was invited but was unable to attend.

March 1, 1995: Meeting with members of the Focus Group to outline the general range of alternatives and to solicit modifications or improvements to the study. The SHPO was invited but was unable to attend.

April 25, 1995: A newsletter informing the public of the general range of alternatives and the planning process was sent to 115 people on the study’s mailing list, the SHPO, 100 copies to the Bear River/Battle Creek Monument Association for general distribution to other interested parties, 300 copies to the Shoshone-Bannock Tribes at Fort Hall, 200 copies to the Northwestern Band of Shoshoni Nation, and 100 copies each to the Shoshone-Paiute Tribes at Duck Valley and the Shoshone Tribe at Wind River.

July 27, 1995: As per the agreement between the National Park Service, the National Council of State Historic Preservation Officers, and the Advisory Council on Historic Preservation, the preliminary draft of the special resources study and environmental assessment was sent to the SHPO asking for review comments during the period that NPS was reviewing the document.

August 30, 1995: The SHPO, in a letter signed by state archeologist Robert Yole, responded to the request for review comments.
Consultation and Coordination

STUDY TEAM AND PREPARERS

National Park Service Planning Team

Catherine H. Spude, PhD, Team
Captain/Archeologist, Denver Service Center
Linda Greene, former Team
Captain/Historian, Denver Service Center
Steve Culver, Outdoor Recreation Planner/Natural Resources Specialist, Denver Service Center
Glenda Heronema, Visual Simulation Specialist, Denver Service Center
Lisa Norby, Natural Resources Specialist, Denver Service Center
William Orr, Landscape Architect, Denver Service Center
Phillip Thys, Visual Simulation Specialist, Denver Service Center
Samuel Vaughn, Interpretive Specialist, Harpers Ferry Center
Fred York, PhD, Cultural Anthropologist, Columbia/Cascades Systems Support Office

Focus Group

John Crowe, Planning Supervisor, Idaho Department of Parks and Recreation
Elaine Johnson, Caribou Historical Society
Karl Kier, Bear River Resource Conservation and Development
Kathy Griffin, Landowner
Allie Hansen, President, Bear River-Battle Creek Monument Association
John Hill, State Historic Preservation Officer
Kent Hortin, Bear River Resource Conservation and Development
Leland Pubigee, Vice Chairman, Northwestern Band of Shoshoni Nation
Brigham Madsen, Historian, University of Utah
Mae Parry, Northwestern Band of Shoshoni Nation
Devon Warrick, Vice President, Bear River-Battle Creek Monument Association
Valerie Watkins, Congressional Aide to Senator Larry Craig
Merle Wells, Historian

Tribal Council of the Northwestern Band of Shoshoni Nation
APPENDIX A:
THE BEAR RIVER MASSACRE SITE
NATIONAL HISTORIC LANDMARK NOMINATION FORM
United States Department of the Interior
National Park Service

National Register of Historic Places
Registration Form

National Historic Landmark

This form, a 10-page version of Form 10-920a, is required for making determinations of eligibility for individual properties or districts. See instructions in Guidelines for Completing Historic Register Forms (National Register Bulletin 16). Complete each item by marking “x” in the appropriate box or by entering the requested information. An item does not apply to the property being documented, enter “N/A” for “not applicable.” For functions, styles, materials, and areas of significance, enter only the categories and subcategories listed in the instructions. For additional space use continuation sheets. Form 10-920a, Type 4A: Telephone.

1. Name of Property

   historic name: Bear River Massacre
   other namesake number: Massacre at Roa Ogoi, Battle of Bear River

2. Location

   street & number: U.S. Highway 91
   city, town: Preston
   state, county: Idaho, Franklin code 041
   zip code: 83237

3. Classification

   Ownership of Property
     private
     public/local
     public/State
     public/Federal
   Category of Property
     building(s)
     district
     site
     structure
     object
   Number of Resources within Property
     contributing
     noncontributing
     12 buildings (5 farms)
     7 objects
     3 roads
     2 power lines
   Name of related multiple property listing:
     number of contributing resources previously listed in the National Register

4. State/Federal Agency Certification

   As the designated authority under the National Historic Preservation Act of 1966, as amended, I hereby certify that this nomination is based on determination of eligibility meets the documentation standards for registering properties in the National Register of Historic Places and meets the procedural and professional requirements set forth in 36 CFR Part 60.
   In my opinion, the property meets these criteria.
   In my opinion, the property does not meet the National Register criteria.
   See continuation sheet.

   Signature of certifying official
   Date

   State or Federal agency and bureau

   In my opinion, the property meets these criteria.
   See continuation sheet.

   Signature of commenting or other official
   Date

   State or Federal agency and bureau

5. National Park Service Certification

   I hereby certify that this property is:

   [ ] entered in the National Register.
   [ ] See continuation sheet.
   [ ] determined eligible for the National Register.
   [ ] See continuation sheet.
   [ ] determined not eligible for the National Register.
   [ ] removed from the National Register.
   [ ] other, (explain)

   Signature of the Keeper
   Date of Action

6. Function or Use

   Historic Functions (enter categories from instructions)
   Site of Indian Village
   Battle site

   Irrigated farms, agricultural fields
   Animal facilities

7. Description

   Architectural Classification
     (enter categories from instructions)
     N/A

   Materials (enter categories from instructions)
     foundation
     walls
     roof
     other

   Describe present and historic physical appearance.

   SUMMARY

   The site's major topographic features in January 1863, as today, are Bear River, Battle Creek (in 1863 known as Beaver Creek), Wayland Hot Springs, the Bear River bottoms (meadows), the bluffs bounding the Bear River bottoms and Battle Creek, and Cedar Point. All these features were important to the Northwestern Shoshonis' choice of this site for the winter encampment of Bear Hunter and his people, the attack by the Army, and the ensuing massacre.

   DESCRIPTION

   o Bear River--The river, with its crystal-clear waters, meanders through the area, flowing from northeast to southwest, until it reaches Wayland Hot Springs, where the course changes abruptly to the south. The river is about 175 feet across and, in the meanders, small islands divide the river into two channels. The river, except during the spring run-off and following cloudbursts, averages three to four feet deep, but there are deep holes where the water is overhead in depth.

   o Battle (Beaver) Creek--A confluent of Bear River, this stream heads a number of miles northeast of the proposed National Historic Landmark. Battle Creek debouches into the Bear River bottoms through a hollow tending from northwest to southeast. After coming out into the bottom, the stream, as it bears off to the south to discharge into Bear River downstream from today's U.S. 91 Highway bridge, flows through a ravine bounded on the east by a cutoff bank. In 1863 the ravine was screened by a dense growth of willows.
Historical Marker.

upstream from the Soldiers' Ford, the Village Cultural features contemporary with the massacre include the River bottoms. Here the escarpment, in a linear distance of by the Californians to cross Bear River to attack the village.

are located as follows:

o Bluffs and Benches--The area of interest south and east of Bear River finds a steep line of bluffs rising from a mean height of 4500 feet above sea level to 4720 feet, inside of 600 to 800 feet of linear distance. The bluffs and the bench beyond toward the southeast were, in 1863, grown up in prairie grasses and sagebrush.

On the north side of Bear River, the escarpment--except downstream from today's highway bridge--is farther back from the river, and, discounting the area where Battle Creek debouches into the bottoms, is not as steep as the bluffs on the river's south side. Once up onto the escarpment, the prairie grass and sagebrush-covered north bench rolls away toward Little Mountain.

Battle (Beaver) Creek debouches through a steep-sided hollow, as does Deep Creek, which bounds the study area on the west.

o Cedar Point--This is the steep bluff overlooking from the west the area where Battle (Beaver) Creek emerges out onto the Bear River bottoms. Here the escarpment, in a linear distance of 550 feet, rises 200 feet.

Cultural features contemporary with the massacre include the Soldiers' Ford, the Village Site, and the Montana Trail. These are located as follows:

o Soldiers' Ford--There are two possible sites for the ford used by the Californians to cross Bear River to attack the village. The first of these is at the sharp bend in the river 3000 feet upstream from the U.S. Highway 91 bridge. The second is 3000 feet farther upstream at a site due east of the Pioneer Women's Historical Marker.

Northwestern Shoshoni Village Site--The 70 lodges occupied by Bear Hunter's and Sagwich's people were sited on either side of Battle (Beaver) Creek, extending south, from where the stream debouched into the Bear River bottom, for 300-400 yards. Bear Hunter's lodge was on the west side of the creek, 400 to 500 feet northwest of the Pioneer Women's Historical Monument.

The bodies of the several hundred Shoshonis killed on January 29, 1863 were left by the soldiers where they fell, a prey to wolves and magpies. Capt. James L. Fisk, in the autumn of 1863, visited the scene and wrote, "Many of the skeletons of the Indians yet remained on the ground, their bones scattered by wolves."

o Montana Trail--The road from Salt Lake City to the Montana mining camps passed through the area from east to west, skirting the escarpment at the foot of Cedar Point.

There are also cultural features subsequent to those associated with the massacre. In addition to roads giving access to the homes of farmers and ranchers, these roads have passed or pass through the study area. They are:

o U.S. Highway 91--This improved hard surface road crosses Bear River downstream from the Soldiers' Ford and passes east of the village site as it continues north and west 37 miles to Pocatello. This is a noncontributing resource, as is the highway bridge.

o Gravel County Road--This road parallels the West Cache Canal and is a noncontributing resource.

o The former alignment of the Utah and Northern Railroad can be traced through the study area. It crossed Bear River several hundred feet above the Highway 91 bridge and paralleled, to the east, today's U.S. 91 to the site of the Pioneer Women's Historical Marker, near which it crossed U.S. 91 and continued north and west up Battle Creek hollow. While this trace has significance, it does not contribute to the site's national significance.

o West Cache Canal--This ditch, paralleling the escarpment's western fringe on the Bear River bottoms, provides water for irrigation purposes and is a noncontributing resource.
Pioneer Women’s Historical Marker—This rock and concrete monument, with plaques dedicated on September 5, 1932, was erected by the Franklin County Daughters of the Utah Pioneers, Cache Valley Council, Boy Scouts of America, and the Utah Pioneer Trails and Landmarks Association. It is located east of U.S. 91 near Battle Creek and identifies the site. In 1956 the "Battle Creek" marker was rededicated and a second plaque added to the opposite side by the Daughters of the Utah Pioneers. This monument is a contributing resource.

Within the study area, there are a number of other noncontributing resources. These are homes and improvements, including irrigation ditches, fences, fields, etc., made by the local residents to support their farming and ranching activities. They have, however, limited impact on the historic scene.

**Statement of Significance**

Certifying official has considered the significance of this property in relation to other properties:

- [ ] nationally
- [ ] statewide
- [ ] locally

Applicable National Register Criteria:

**Summary**

The Bear River Massacre Site, the location of a desperate and bloody tragedy that resulted from 25 years of hostilities between the Northwestern Shoshonis—driven to desperation by loss of their traditional sources of food and lifeways—and the California Volunteers, is deemed to be nationally significant because it possesses "exceptional values in illustrating or interpreting the heritage of the United States in history...." The site also possesses "a high degree of integrity of location, setting, feeling and association."

In this respect, the Bear River Massacre Site, as the scene of the bloodiest massacre, or "promiscuous wholesale slaughter," of Native Americans to take place in the West in the years between 1848 and 1891, meets one of the criteria for designation as a National Historic Landmark:

1. It is associated with events that have made a significant contribution to, and are identified with... the broad patterns of United States history and from which an understanding and appreciation of these patterns may be gained.

**Historic Significance**

Western Historian Don Russell in a July 1973 article in The American West titled, "How Many Indians Were Killed? White Man Versus Red Man; The Fact and the Legend," focuses on confrontations between the U.S. Military and vigilante forces and Native Americans in the vast trans-Mississippi region. On doing so, Russell accepted the definition of a "massacre" as being a "promiscuous wholesale slaughter," especially of those who can make...
First in time and synonymous with horror was Colorado's infamous Sand Creek Massacre of November 19, 1864, when the "fighting preacher" Col. John M. Chivington and his Colorado Volunteers killed 130 Cheyennes, "two-thirds of them women and children." Chivington subsequently wrote that, several days before the attack on the Indians, he met in Denver with Brig. Gen. Patrick E. Connor, who told him:

I think from the temper of the men that you have and all I can learn that you will give these Indians a most terrible thrashing if you catch them, and if it was in the mountains, and you had them in a canon, and your troops at one end of it and the Bear river at the other, as I had the Pi-Utes [Shoshoni], you could catch them, but I am afraid on these plains you won't do it. [2]

The second massacre of Native Americans identified by Russell was the "battle" of the Washita, November 27, 1868, when Lt. Col. George A. Custer and his troopers of the 7th U.S. Cavalry attacked Black Kettle's village, on the Washita River in present Oklahoma, killing some 103 Cheyenne warriors and a number of women and children. The next such major episode occurred on January 29, 1870, on the Marias River in Montana Territory, where Maj. Eugene M. Baker and his 2nd U.S. Cavalry killed 173 Piegans, 120 men and 53 women and children. Then, the next year, at Camp Grant, Arizona Territory, on April 20, 1871, 170 vigilantes assaulted and killed some 150 Aravaipa Apaches. The last and most noteworthy massacre cited by Russell took place at Wounded Knee, South Dakota, on December 29, 1890. Here 84 Sioux men, 44 women, and 18 children--a total of 146--were killed by troops of the 7th U.S. Cavalry and their four howitzers. Russell's "reasonable total" of Indian dead in the five massacres was 615. [3]

As Western Historian Brigham Madsen has noted in his heralded publication, The Shoshoni Frontier and the Bear River Massacre, "The Affair at Bear River" on January 29, 1863, was not listed by Western Historian Russell, "although it resulted in more casualties than any of the five" he described. "The reasonable figure of at least 280 Shoshoni deaths at Bear River makes the massacre one of the most significant Indian disasters in Western American History."
On January 14, 1863, an express rider returned to Salt Lake City with word that two expressmen had been killed by Shoshonis on the Cache Valley road. He reported that the Shoshonis had sworn "to avenge the blood of their comrades" slain by soldiers led by Major McGarry at Bear River Ferry in early December 1862, and that the "spiteful" Indians planned to "kill any white man they should meet with on the north side of Bear River, till they should be fully avenged." Commenting on the murders, the editor of the Salt Lake Deseret News advocated that steps be taken to "dispose them to peace."[9]

On January 5, 1863, ten miners traveling south on the Montana Trail were rumored to have been murdered by Indians. Some 24 hours later, eight men en route to Salt Lake City lost their way and struck the Bear River opposite the village of Richmond. While the rest of the party crossed the river to seek assistance from the villagers, a number of Indians arrived at the camp, drove off their stock, robbed the wagons, and behaved "very disaffectedly to the five men." Following the return of the trio, the travelers prevailed on the Indians to return some of their livestock and crossed three wagons to the river's east side. The Indians then opened fire from the west bank and killed John H. Smith. Upon reaching Salt Lake City, one of the survivors signed an affidavit before the Territorial Chief Justice describing Smith's murder. Whereupon, the Chief Justice issued a warrant for the arrest of Bear Hunter, Sampitch, and Sagwich of the Northwestern Shoshonis and ordered the Territorial marshal to seek the assistance of Colonel Connor to "effect the arrest of the guilty Indians."[10]

B. Colonel Connor Takes the Field

1. Connor Gets a Court Order

Colonel Connor welcomed the court order, because, upon receipt of word of the attacks, he had made plans for a punitive expedition northward to hammer the Cache Valley Shoshonis. He accordingly told the marshal that "my arrangements for our expedition are made, and that it was not my intention to take any prisoners ...." The colonel, in his official report, noted:

Being satisfied that they [the Indians] were part of the same band who had been murdering emigrants on the overland mail route for the past fifteen years and [were] the principal actors and leaders in the horrid massacre of the past summer, I determined, although the weather was unfavorable to an expedition, to chastise them if possible.
Connor, in planning the expedition, had for his guidance an order issued by Headquarters, Department of the Pacific, dated April 7, 1862, reading: "Every Indian captured in this district during the present war who has been engaged in hostilities against whites, present or absent, will be hanged on the spot, women and children in all cases being spared." [11]

Colonel Connor, apprised that Chief Sanpitch of the Northwestern Shoshoni had traveled down from Bear River to meet with Mormon Leader Brigham Young, became concerned that the Indians might learn of the proposed expedition, relocate their winter encampment, and deprive his California Volunteers of their opportunity for some "Indian killing." An early advocate of carrying the war to the Indians after they had settled into their winter villages, so that the warriors, if attacked, would be encumbered by their women and children, Connor, on January 19, alerted his soldiers to be ready to take the field on a moment's notice. A Mormon leader, learning of this, cautioned that the expeditions then outfitting would catch some friendly Indians, murder them, and let the "guilty scamps remain undisturbed in their mountain haunts." [12]

2. The March North

On the morning of January 21, Capt. Samuel W. Hoyt of Company K, 3d California Infantry, took the field. His command consisted of 69 foot soldiers, two 6-pounder mountain howitzers, and 15 wagons loaded with baggage and 20 days rations for his troops and grain for the animals. It was snowing as the column tramped out of Camp Douglas and took the road leading northward. To keep the Indians from learning of the army's plans, stories were circulated that Hoyt's people were on route to protect wagons hauling grain down to Salt Lake City from Cache Valley.

Captain Hoyt and his troops made no effort to conceal their movements. They marched by day and camped early. If seen by the Indians, their sighting reinforced the stories that had been planted that this was another detachment sent north to provide security to a slow-moving wagon train. Nightfall on the 26th found Hoyt's company camped at Mendon, where the troops "laid over" a day. [13]

Meanwhile, Colonel Connor had taken the field with his main column--220 hard-riding officers and men of Companies A, H, K, and M, 2d California Cavalry. It was long after dark on January 24 when the horse soldiers rode out. Unlike the infantry, the cavalry was to conceal its movements from friend and foe until within one day's march of the Bear River village, tactics that the editor of the San Francisco Bulletin believed would prevent the Indians from "skedaddling to the mountains."

The cavalrymen were armed with revolvers and carbines, were supplied with ammunition, and each man carried three days' cooked rations in his haversack.

Connor and his flying column, traveling only at night, reached Mendon on the 27th, where they rendezvoused with Captain Hoyt's command. The weather had turned bitterly cold, and snow blanketèd the ground in some places--such as the divide between Brigham City and Cache Valley--to a depth of four feet. [14]

The soldiers spent the day drawing rations and squaring their gear away. They had been joined by Orrin P. Rockwell, an experienced Mormon scout. Rockwell had heard of Shoshoni boasts that they would "thash the soldiers and cautioned Colonel Connor that the Native Americans, numbering some 600 fighting men, had "thrown up intrenchments to protect their village." A miner, recently back from the diggings, had spoken with several Northwestern Shoshonis, and they had told him they had no grudge against the Mormons, but they intended to revenge themselves on white travelers for "injustices" inflicted on them by Major McGarry and his cavalry.

Captain Hoyt and his infantrymen, escorting the howitzers and wagons, departed from Mendon at midnight on the 27th. Colonel Connor and the four companies of horse soldiers broke camp many hours later. Hoyt's people, marching 34 miles in 17 hours, entered Franklin, 12 miles from the Bear River village, at dusk on the 28th. [15]

3. The Soldiers Reach Franklin and Connor Prepares a Surprise Attack

Not long before the soldiers came into sight, one of the villagers, in obedience to Bishop Preston Thomas' instruction, had sacked up nine bushels of wheat to turn over to three Shoshonis sent by Chief Bear Hunter. The wheat was an increment on the tribute the Mormon farmers were in habit of paying to the Native Americans to keep the peace. Two of the three horses had been loaded, when the farmer looked to the south and saw soldiers approaching. He warned the Indians, saying, "Here come the
The bluff from where the soldiers surveyed the village was so steep that, except where the Montana road came down off the bench, it would be a hard ride for the cavalry to get down off of it. Bear River, at this season of the year at the site of the ford, is about 175 feet in width and three to four feet deep. Beaver Creek (fated to be hereinafter known as Battle Creek) merges its waters with Bear River upstream from Wayland Hot Springs.

Beaver Creek—flowing through a steep-sided hollow—debouches into the Bear River bottom opposite the bluff from where Major McGarry studied Bear Hunter's village. After entering the bottom, Beaver Creek changes course from southeast to southwest, the waterway paralleling Bear River to its confluence with the larger stream, downriver from today's U.S. Highway 91 bridge. Beaver Creek, for much of the forthcoming fight, provided the Shoshonis with a strong defensive position against an attacking force crossing at the ford. Cedar Point, a steep headland, juts out into the valley and is in front of the northeast and southwest by Beaver Creek. A flat flood plain about one-third mile across separates Bear River and Beaver Creek. [18]

A correspondent for the San Francisco Bulletin had accompanied Colonel Connor. He informed readers that the Beaver Creek ravine varied in depth from 6 to 12 feet and was 30 to 40 feet wide, with its eastern bank nearly vertical. The Shoshonis had cut three openings through this bank to enable them to ride their ponies in and out of the village. There were erroneous reports by people who should have known better that the Native Americans had constructed field fortifications—rifle-pits and trenches—into this embankment to strengthen their position. Upon closer study it was found that these "works" were steps dug into the cutbank to afford ease of access to and from the ravine.

Colonel Connor observed, in his "After Action Report," that "under the embankments they [the Indians] had constructed artificial covers of willows thickly woven together, from behind which they could fire without being observed." Willows, some as much as 20 feet in height, choked the Beaver Creek bed and extended up and over the west bank and beyond to the steep bluffs southwest of Cedar Point. [19]
3. Caught in the Eye of the Hurricane--Bear Hunter's Village and People

The Shoshoni village, beginning south of Cedar Point, bounded Beaver Creek and extended southward for several hundred yards. The village pony herd was pastured on the meadow west of the creek and east of the bluffs. The village numbered 75 lodges, housing about 450 Shoshoni men, women, and children. The site--with the hot springs, bluffs, lush meadows, and windbreaks--had for years been a popular winter campground.

The Shoshonis, alerted to the approach of the soldiers by Chief Sagwich, milled about outside their lodges. They anticipated that the Army officers would follow their usual policy by demanding that the Indian leaders surrender those guilty of recent murders, or, at worst, demand hostages until a parley could resolve outstanding differences. The Shoshoni leaders underestimated their enemy and Colonel Connor's determination to employ maximum force to make the roads and trails of Utah Territory secure to travelers. Bear Hunter's and Sagwich's people, in the face of this threat, would have welcomed the support of Chief Pocatello, but Pocatello and his people had left the village on the 28th. [20]

4. Major McGarry's Battalion Meets the Northwestern Shoshonis

Col. Connor, concerned that the Indians might escape if he waited for Hoyt's people and the howitzers, told Major McGarry to ford Bear River, and "surround before attacking them, while I remained a few minutes in the rear to give orders to the infantry and artillery." Spearheaded by Companies K and M, the horse soldiers spurred their steeds down the steep escarpment and into the ford. The water was so deep that most of the men, although they flexed their knees, got their 'feet wet.' Pvt. John R. Lee of Company K recalled, "That was a bad looking river, half frozen over and swift. The horses did not want to go in. And old boys got threw by their horses." West of the river, the California Volunteers entered a meadow some 400 to 500 yards across, bounded by the river at their rear and Beaver Creek and Cedar Point to their front. Out from the ravine to meet the on-coming soldiers sallied 50 warriors, some on horseback and the rest afoot. And, as Connor, who had not yet crossed the river, was told by Major McGarry, "with fiendish malignity waved the scalps of white women and challenged the troops to battle." [21]

5. Bear Hunter and His Warriors More Than Hold Their Own

Major McGarry's response was predictable. Seeing the village was too extensive to surround with his force, many of whom were wounded or, at worst, demand hostages until a parley could resolve outstanding differences. The Shoshoni leaders underestimated their enemy and Colonel Connor's determination to employ maximum force to make the roads and trails of Utah Territory secure to travelers. Bear Hunter's and Sagwich's people, in the face of this threat, would have welcomed the support of Chief Pocatello, but Pocatello and his people had left the village on the 28th. [20]

6. Colonel Connor Calls Up His Reserves and Redeploys His Command

Colonel Connor now crossed Bear River, found that his men were falling back over the fire line some distance from their rendezvous point, and saw that the Native Americans had the advantage of position, and called to Major McGarry to pull back. The soldiers retired by squads and reestablished their firing line some distance from their rear and Beaver Creek ravine. Connor told McGarry to take a score of men, move to the right, and outflank the Shoshonis. McGarry, followed by 20 dismounted cavalry and covered by the fire of the men on the skirmish line, gained the bluff on the east side of Beaver Creek upstream from the village. Coincidentally, Captain Hoyt and the men of Company K, 3d California Infantry, had reached the Bear River ford. Harking to

The Bulletin's war correspondent informed his readers:

Here redskins were evidently full of good humor and eager for the fray. One of the chiefs was galloping up and down the bench in front of his warriors, haranguing them and dangling his spear on which was hung a female scalp in the face of the troopers. And many of the warriors sang out, "Fours right, fours left. Come on, you California sons of b----s ...." [22]

The Bulletin's war correspondent informed his readers:

And many of the warriors sang out, "Fours right, fours left. Come on, you California sons of b----s ...." [22]

the sounds and shouts of battle, Hoyt and some of his soldiers rushed into the icy river, found an impassible barrier, and floundered back up onto the bank. The day was bitter cold and the foot soldiers suffered as their wet uniforms froze to their persons.

Colonel Connor was omnipresent. Recognizing the infantry's predicament, he ordered some of the horse-holders to take their steeds and transport Hoyt and his people across Bear River. Hoyt's infantry, after dismounting, hastened to the right and reinforced McGarry on the bluffs. While McGarry deployed Company K, his dismounted cavalry, from their commanding ground, opened a deadly enfilade fire on the left flank of the Indians posted in the Beaver Creek ravine and into the nearby lodges.

Colonel Connor now took action to perfect his strategy by undertaking a double envelopment of the village. If successful, there would be no escape for Bear Hunter and his people. Lt. Cyrus D. Clark, followed by Company K, 2d California Cavalry, moved off the firing line and headed downstream. He posted his men astride Beaver Creek near where it flowed into Bear River, with the mission of preventing an Indian breakout in the direction of Wayland Hot Springs. Lt. John Quinn, with those men of Company A who had not dismounted, crossed Beaver Creek upstream from Clark's people and deployed his troops into line preparatory to attacking north and east against the village's right and rear.

7. The Tide of Battle Turns

Major McGarry's reinforced company, their deadly enfilading fire having given them the "bulge," advanced down the Beaver Creek hollow. The bluffs commanding the hollow gave the Californians favorable ground from which to cover their comrades as they fought their way into the northern end of the village. Galvanized into action by McGarry's thrust, Lieutenant Quinn's dismounted troopers closed on the villages from the opposite direction—the southwest. Along the skirmish line east of the Beaver Creek ravine stronghold, Capt. George F. Price's men took advantage of the situation to again fight their way out into the meadow, from where they had been driven earlier by the Shoshonis' well-aimed small-arms fire. The fight, as the soldiers entered the village, became hand-to-hand, in which the well-armed cavalry employed their revolvers with deadly effect. [23]

Some of the officers were armed with six-shot revolvers. A participant recalled that "Captain McLean had a pistol shot out of his right hand ... and while drawing another with the left received a bullet in the groin...." [24] Although the Native Americans defended their lodges and families with "dogged obstinacy," the tide of battle turned decisively against them. The Californians "settled themselves down to the work before them, as a dray horse would set himself to pull his load up hill," along the firing line east of the village. When Price saw eight of his men cut down, either killed or mortally wounded, but the Indians to their front suffered frightful losses. After the battle, Price's troopers counted 48 Indian dead heaped about.

8. The Fight Becomes a Massacre

Colonel Connor was with Price's soldiers when a number of warriors cut their way out of the ravine that had once afforded security, but had now become a slaughter pen. "A wild yell from the rear alerted Connor of the situation, and he called for Lt. George D. Conrad of Company H to take a detachment, secure their mounts from the horse-holders, and cut off the Indians as they sought to escape across Bear River. Lieutenant Quinn and his mounted people joined in the pursuit. With the Californians hard on their heels, the Shoshonis sought cover along the willowed shore of Bear River. Here there was more "war to the knife and the knife to the hilt." Quinn's horse was shot from under him, Maj. Patrick A. Gallagher and Capt. David Berry were seriously wounded, and "one of the men close by Colonel Connor was shot from his horse." A number of Indians attempted to swim across the river. Many of them were shot by soldiers posted on the west bank. Others were swept downstream to find refuge in the chutes or drowned in the icy current. A few escaped by scrambling up the bluffs west of Beaver Creek. [25]

The fight lasted about four hours, and, by 10 a.m., the bloodletting ceased. Surgeon R.K. Reed had located his aid station near the horse-holders' line, but much of the combat raged at such short ranges that wounded soldiers were left where they dropped. The day was bitter cold and a number of the Californians had frozen toes and fought with "fingers so frozen that they could no tell they had a cartridge in their hands unless they looked ... ." The San Francisco Bulletin's war correspondent, an eyewitness, informed his readers. The carnage presented in the ravine was horrible. Warrior piled on warrior horses mangled and wounded in every conceivable form, "with here and there a squaw and papoose, who had been accidentally killed...." [26]
D. The Toll in Dead and Wounded

1. The Military's

The battle ended. The Army officers assembled their companies and rolls were called. Colonel Connor found that, of the 200 soldiers engaged, he tallied 14 dead enlisted men, and 4 officers and 49 soldiers wounded—of whom 1 officer and 6 men subsequently died of their injuries.

2. A Grim and Terrible Body Count

Body counts have always been important, and Connor promptly called for one. He reported:

We found 224 bodies on the field. ... How many more were killed than stated I am unable to say, as the condition of the wounded [Californians] rendered their immediate removal a necessity. I was unable to [personally] examine the field. I captured 175 horses, some arms, destroyed over seventy lodges, a large quantity of wheat and other provisions, which had been furnished [the Shoshonis] by the Mormons; left a small quantity of wheat for the sustenance of 160 captive squaws and children, whom I left on the field. [27]

Lt. Col. George S. Evans of the 2d California Cavalry, who had remained at Camp Douglas and was not on the scene, relying on reports of his officers who were there, wrote, "we succeeded in almost annihilating the band; having killed some two hundred and seventy-five—224 bodies were found on the field and as many as fifty fell in the river...." [28]

James D. Doty, representing the Department of the Interior as superintendent for Indian Affairs in Utah Territory, informed his superiors in Washington that Shoshoni survivors of the massacre reported that 255 men, women, and children were killed in the engagement on Bear River.

2. Californians Report No Adult Male Wounded or Prisoners

A review of the reports by the white establishment of their body counts, many more of which are referenced by Brigham D. Madsen in his definitive account of the conflict, found in The Shoshoni Frontier and the Bear River Massacre, reveals that neither the senior officers, nor the reports and stories told by other whites, reference any Native Americans wounded or any male Shoshonis captured. The usual percentage of killed to wounded in battles fought during the Civil War, contemporary with Bear River, was four wounded to one dead. Connor and his soldiers evidently believed that the only good male Indian was a dead Indian. While neither Connor nor Evans listed any Native American women or children in their body counts, Agent Doty does. [29]

4. How Many Dead Women and Children?

Just how many women and children were killed or wounded in the fight, the closing phases of which took place in the willow thickets and about the lodges, has never been determined. Abraham C. Anderson, in an article published in the Union Vedette on January 29, 1867, the fourth anniversary of the attack, recalled that "as soon as the squaws and children ascertained that the soldiers did not desire to kill them, they came out of the ravine and quietly walked to our rear." Anderson also noted that "three women and two children were accidentally killed." [30] A New York Times correspondent, relying on the stories of white participants, opined that ten women had been slain. [31] A Native American told Samuel Roskelly, a Cache Valley settler, that at least 30 women had been killed by the soldiers "and many children." Another Cache Valley Mormon, John Martineau, reported 90 women and children dead. [32] The correspondent for the Bulletin informed his readers in an article published in the San Francisco Alta California that 120 women and children had survived the battle. [33]

Only about a score of male Shoshonis escaped the holocaust. Numbered among the dead so-called warriors were a proper ratio of hoary-haired men in their 60s, 70s, and 80s. Chief Bear Hunter and subchief Lehi had been killed and the former's body mutilated. Chief Sagwich escaped when he tumbled into the River and floated down under some brush and lay there til night, and after dark he and some more warriors ... took off two of the soldiers horses and some of their own ponies and went north." [34]
E. The Californians Return to Camp Douglas and Colonel Connor Gets a Start

The Californians spent the night of January 29, 1863, camped in the Bear Creek bottoms. The wounded were sheltered in tents and the remainder of the battalion huddled and bedded down around roaring fires fed by poles taken from the Shoshonis' lodges. Colonel Connor had dashed off a message to Colonel Evans at Camp Douglas, informing him of the victory and directing him to rush north a relief column with medicines and rations to assist the returning troops. Sleds and teams were requisitioned from the Franklin and Richmond Mormons to haul the dead, wounded, and those with the worst cases of frostbite south to Camp Douglas.

On the morning of the 30th, following arrival of the sleds and their drivers, Connor's column crossed Bear River. Nightfall found the soldiers camped at Franklin. Six more days passed before the troops arrived back at Camp Douglas. Connor's attack on and destruction of Bear Hunter's people and village earned for him a commendation from the Railroad and prompt promotion to brigadier general in the U.S. Volunteers to rank from March 30, 1863. [35]

F. General Connor's Mailed Fist Brings Peace to Utah Territory

General Connor retained the initiative gained at Bear River. In May, a company post, Camp Connor, was established at Soda Springs, an Oregon Trail landmark, where the wagon road broke away from Bear River to reach the divide that gave access to the upper reaches of the Blackfoot River. Patroits operating out from Camps Connor and Douglas and Fort Bridger from late spring until autumn of 1863 harassed the Idaho Territory Shoshonis and Bannocks. Soon these chiefs, fearing the fate of Bear Hunter and his Northwestern Shoshonis, opted for peace. Connor also carried the war to the Utes and Gosiutes, who had been striking at traffic traveling the Overland Mail Route between Salt Lake City and Fort Ruby.

At councils held during the summer of 1863, General Connor and Superintendent Doty made peace with nearly all the Native Americans of Utah. By October 1863, they notified the Overland Mail Company that all Indians in Utah Territory were at peace and "all routes of travel through Utah Territory to Nevada and California, and to the Beaver Head and Boise river gold mines, may now be used with safety."

BIBLIOGRAPHY

Alta California (San Francisco), 1862-1863.

Deseret News (Salt Lake City), 1862-1863.

Union Vedette (Salt Lake City), 1867.
The southeast corner of the boundary enclosing the site is located on the west side of the farm road dividing Sections 9 and 10, Township 15 South, Range 39 East, at a point 1,400 feet north of the southeast corner of Section 9. From there— the point of beginning— the East boundary of the site runs north, with the east line of Sections 4 and 9, approximately 7,900 feet to the south side of the east-west farm road that is parallel to and 1,300 feet south of the north boundary of Section 4. The north boundary of the site then extends due west 7,400 feet to intersect the Utah Power and Light power line at the 4,600-foot contour on the escarpment west of Battle Creek; then southwest with the power line to the point where it crosses over a farm road near the 4,700-foot contour; then due west 1,750 feet with the south side of the farm road to its intersection with the north-south county road at the point where Sections 5, 6, 7, and 8 corner; and then south, with the east side of the aforementioned county road 4,020 feet to a point 1,400 feet north of the southeast corner of Section 7. From here— the southwest corner of the proposed NHL— the line runs due east 10,400 feet to the place of beginning.

BOUNDARY JUSTIFICATION

The boundary, as described, includes the site of the Northwestern Shoshoni Village, the escarpment south of Bear River from where the Californians reconnoitered the village preparatory to attacking, the Soldiers Fords, the Battle (Beaver) Creek ravine and hollow, the area where the Northwestern Shoshonis initially battled and more than held their own against Major McGarry's battalion, the ground where Colonel Connor brought up and deployed reinforcements, the massacre site where the Northwestern Shoshonis sought to escape the fury of the Californians, and the Pioneer Women's Historical Memorial, as well as roads, irrigation canals, and ditches, etc., made in the years since the 1860s to support ranching and farming activities, do not contribute to the national significance of the resources associated with the village, battle, and massacre.
APPENDIX B:

ISSUES DISCUSSED DURING SHOSHONE CONSULTATION MEETINGS

The National Park Service, as a federal agency, and Indian tribes have a special relationship granted to them under the treaties that created their respective reservations. This relationship was recently reaffirmed in a memorandum dated April 28, 1994 from the President of the United States to all federal department and agency heads directing them to consult with tribes about actions that would affect them, especially in matters of concern to their cultural heritage. This directive is built on a substantial body of legislation, including, but not limited to the National Historic Preservation Act and the National Environmental Policy Act (NEPA). Because there is a potential for human remains and other items described by the Native American Graves Protection and Repatriation Act to be located on the Bear River massacre field, if the site became a unit of the national park system, auspices of that act would also apply.

These directives, laws, and relevant NPS policy direct that Indian tribes with a traditional cultural interest in an area being considered for addition to the national park system be consulted above and beyond the extent to which the public at large is consulted under the provisions of NEPA.

During the meetings with tribal councils and cultural representatives of two of the Shoshone tribes, several issues were raised that are beyond the general conceptual scope of this alternatives document. In order that these issues not be forgotten during any succeeding planning that may occur, a description of the concerns is outlined below.

Meetings were also held with special interest groups, including the landowners and a focus group comprised of representatives of most of the groups of people interested in this study. Their concerns are enumerated in the section of this study entitled "Issues."

MEETING WITH THE TRIBAL COUNCIL OF THE SHOSHONE-BANNOCK TRIBES AT FORT HALL RESERVATION (AUGUST 17, 1994)

NPS regional cultural anthropologist Fred York and team captain Catherine H. Spude met with six of the seven Fort Hall Indian Reservation Business Council Members: Vice Chairman Keith Tinno, Secretary Delbert Farmer, Treasurer Claudeo Broncho, and council members Linford Ponzo, Hobby Hevehaw, and Duane Thompson. Only Chairman Marvin Osborne was unable to attend the meeting. In addition, two staff members from the tribal Cultural Resource office were at the meeting: Esther Plentyhawk and John Furniss.

The NPS representatives outlined the planning process and described what the special resource study was to achieve. The following concerns and ideas for solutions were voiced.

Issues

Tourism/Economy: The council stated that they object to the very idea that people in Preston could profit by a boost in tourism based on the massacre of Shoshone people. Therefore, they are fundamentally opposed to the creation of a park or development of visitor facilities.

However, they recognized that development of the site could occur with or without them, and therefore, they appreciate the opportunity to participate in the planning for the site. They stated that tourism is growing in the area, especially towards Bear Lake, that Utah State University in Logan is growing, and traffic is increasing through the Preston area. They noted that Idaho has a state lottery, and a lot of people from Utah go as far as Franklin to buy lottery tickets. They believe that Franklin is one of the fastest growing communities in Idaho. They observed that Californians and other suburbanites are discovering Idaho and starting to move to the state. As a result of all this growth, they are concerned that the Idaho state department of transportation would eventually want to widen U.S. highway 91 through the landmark boundaries.

Interpretation: The council believes that the story of the massacre is still heavily biased towards the army and settler interpretations of what occurred. They stated that there is more than one Shoshone story, and they would like to see a greater emphasis placed on the various Shoshone understandings of the event. They want to see additional research undertaken to understand the Shoshone family stories of the massacre. They believe such research needs to include people who speak both Shoshone and Bannock languages. They pointed out that many Shoshone people do not believe that the California Volunteers were "real" soldiers and did not have the authority to do what they did. They also believe that the Mormon context has not been adequately interpreted: that is, the Mormons themselves were viewed as different from mainstream American culture of the time, and that Connor was stationed in Salt Lake City to control the Mormons as much as the Indian populations.

Artifacts: Both documentary and oral history evidence suggests that soldiers engaged in a great deal of looting after the massacre. They believe many of those items may now be at Fort Douglas. The Shoshone also suspect that Preston citizens and local landowners have substantial collections of artifacts taken from the massacre site. They do not like to see these items regarded as war trophies or souvenirs.

Tribal Rights: The tribe is trying to reassert tribal rights to hunting and fishing on certain lands outside the reservation. As a result, the council is interested in placing the massacre site under federal management and ownership. Under the terms of their treaties, and presumably enabling legislation upheld those stipulations, federal ownership would give tribal members an opportunity to resume hunting and fishing on what was once land used by many Shoshone bands.
Archeology: Members of the tribal cultural resource office were concerned that only archeologists had monitored the recent construction of the new highway segment through the landmark boundaries. They do not believe all archeologists have the expertise to recognize Shoshone cultural features. They said that there should be Shoshone monitors on all ground-disturbing activities within the landmark boundary, not just in the vicinity of the massacre field and encampment. The cultural resource office for the tribe is an archeological staff that is capable of doing such studies.

There was some concern expressed about archeological research within the landmark. They want to make sure that any proposed research be focused with concrete research questions, and that it not be undertaken out of mere curiosity.

Shoshone Memorial: During the July 13, 1994 “brain-storming” meeting with the focus group, some members of the Northwestern Shoshoni band had suggested a “simulated grave” or memorial of some sort to the Indian people who were killed in the massacre. Some members of the Shoshone-Bannock tribal council were concerned about such a suggestion. They said that traditional Shoshone people believe that the spirit needs to be released and not held captive in a grave or tomb. A monument might be appropriate, but not a simulated grave.

Suggested Solutions

The council suggested that preference be given to the hiring of Shoshone people, especially as interpreters and in conducting any research for use in interpretation. This solution could address both the concerns that the people of Preston would exclusively profit from tourism at the massacre site, and would also assure them that the Shoshone portion of the story be told more fully.

The tribal council suggested that federal land exchanges be considered for any acquisition that needs to be done in any alternative. They said that the Bureau of Land Management owns land in the Preston area that landowners would find equally convenient for their business. This possibility could be explored, but the presence of homes on subject lands and access to water rights would have to be taken into consideration when negotiating land trades.

The council would like NPS or whatever agency manages the site to enter into a Memorandum of Understanding with all of the Shoshone bands to clearly define roles, responsibilities, and Shoshone rights.

Shoshone Participation in Planning

The council stated that there are at least two factions with differing versions of the massacre story within the Shoshone-Bannock and Northwestern Shoshoni tribes. Factions that are not necessarily divided along tribal lines. They suggested that NPS not limit itself to meeting with only one faction.

The council further believes that there is a substantial amount of discrimination against Indians in the Preston area. Because all previous meetings have been held in Preston, they were concerned that NPS is not hearing Indian concerns. They do not think that public meetings should be restricted to the Preston area.

There was a request to review the draft plan before it is issued to the general public.

MEETING WITH THE TRIBAL COUNCIL AND INTERESTED TRIBAL MEMBERS OF THE NORTHWESTERN BAND OF SHOSHONI INDIAN NATION (MARCH 27-28, 1995)

NPS regional cultural anthropologist Fred York and team captain Catherine H. Spude met with members of the Northwestern Shoshoni tribal council on March 27, 1995. About twelve Northwestern Shoshoni tribal members and council members were in attendance. NPS introduced the Special Resources Study and received a good deal of comment about how it was originally Shoshone land, it should not be in private ownership now, and should be turned back to the Shoshone. It was explained that it was not the NPS purpose to explore the feasibility of repatriation of their land but to look at ways to protect, preserve and interpret the site.

This meeting was followed by a field trip to the massacre field site. Allie Hansen, president of the Bear River/Battle Creek Monument Association, joined the NPS representatives and about 30 Shoshoni people. Mrs. Hansen gave a talk about the encampment, the troop movements, and some of the details of the massacre. A few Shoshoni people disagreed with some minor items of historical particulars. Several individuals commented that they had visualized the entire area differently. Many seemed concerned about site impacts, roadside litter, indiscriminate dumping of trash, the cows grazing on the massacre field, and the houses crowding the area.

NPS representatives answered a number of questions related to treatment of human remains under federal and state law. Historical reports for years after the massacre indicated that Shoshone bodies were left on the massacre field and never buried. Subsequent land slides and floods in the area may have buried the bones that remained. A concern was expressed that landowners could dig up bones and never tell anyone, so the state could not enforce its law. NPS indicated that under Idaho state law, it is illegal for private landowners to intentionally withhold information about burials, or to keep human remains in their possession.

On March 28, 1995 NPS representatives again met again with the tribal council and other interested tribal members in Brigham City, Utah. Most of the tribal council was in attendance, as well as ten other tribal members.

NPS representatives described the actions that would probably be common to all alternatives and then outlined each of the four alternatives, all very briefly, emphasizing that the environmental
assessments would weigh the effects of each alternative so that Congress could make the best decision.

In the discussion that ensued, the following concerns were voiced:

1. The land is Shoshone land and was granted to them by treaty. The land is owned by non-Shoshones illegally.

   Note: According to Richard Clemmer and Omar Stewart in *The Handbook of North American Indians, Vol. 11, Great Basin* (Washington, D.C.: Smithsonian Institution, 1986, pages 530-534) and *the Idaho Indian Tribal Histories* (Boise: Native American Committee, Idaho Centennial Commission; no date, pages 48 and 57), the Cache Valley north of Logan was included in the Treaty of Box Elder of July 30, 1863. The last of four Shoshone signatories to the treaty signed on October 14, 1863 at Soda Springs, including remnants of the bands who were at Bear River. However, an agreement ratified by the leaders of the Shoshone-Bannock in 1881 ceded the southern portion of the reservation, forming a boundary similar to what is now the Shoshone-Bannock Reservation at Fort Hall. Some of the Northwestern Band of Shoshoni contend that they were not signatories to that later agreement.

2. The land should be returned to the Shoshone.

3. The massacre field is a burial ground and is very sacred to them.

4. They do not like buildings and domesticated animals on the massacre field.

5. They want the human remains protected and believe that the Native American Graves Protection and Repatriation Act (NAGPRA) is a stronger law than the Idaho state law protecting human remains. Because NAGPRA only applies to federally owned land or land held in trust for Indian tribes, it cannot be enacted as a result of federal actions on private property, nor does it apply to the actions of private citizens on their own land. For that reason, the Shoshoni would like to see the massacre field in federal ownership. They would also like to be given the opportunity to rebury other remains repatriated to them on the massacre site.

6. They recognize that the Northwestern Shoshoni do not have the funding resources to operate a visitor center or cultural center and that they envision such operation to be cooperative between NPS and the tribe.

7. They do not think the state of Idaho could operate the site as well as the NPS. They see NPS having greater access to funds.

8. They like the idea of the cultural center, want opportunities for the employment of tribal members, and very much want to see all the different family stories collected and told.

9. They would like a way to display items (artifacts) from their cultural heritage.

10. They want involvement in the Cultural Center.

11. They suggested a fifth alternative, one in which the site is managed by the tribes. After some discussion, the group appeared to agree that joint NPS/tribal management would be better. They envision NPS providing money and technical expertise and the tribe providing knowledge and possibly control over the content of the message and use of the massacre field.

12. A Shoshone should be appointed as a full-fledged member of the planning team on any future planning of the site. Besides tribal officials or elders that could fill this role, there are currently students in the landscape architecture program at Utah State University who are tribal members and who would eventually be qualified as professional planners.

13. They would like to see hiring preferences for Shoshones.

14. If the area becomes a fee area, they asked that the legislation specify that there would be no entrance fees for Shoshones.

15. Under any alternative, the Shoshone should be allowed access to the massacre field itself for performance of ceremonies and other observances without having to get advance permission.

As the nation's principal conservation agency, the Department of the Interior has responsibility for most of our nationally owned public lands and natural resources. This includes fostering wise use of our land and water resources, protecting our fish and wildlife, preserving the environmental and cultural values of our national parks and historical places, and providing for the enjoyment of life through outdoor recreation. The department assesses our energy and mineral resources and works to ensure that their development is in the best interests of all our people. The department also promotes the goals of the Take Pride in America campaign by encouraging stewardship and citizen responsibility for the public lands and promoting citizen participation in their care. The department also has a major responsibility for American Indian reservation communities and for people who live in island territories under U.S. administration.
