A Compact Ion and Neutral Mass Spectrometer for CubeSat/SmallSat Platforms

GFSC RMS Team: Marcello Rodriguez, Nick Paschaldis, Sarah Jones, Ed Stifter, Dennis Chomay, Paulo Urbie, Tim Cameron, Bobby Nanan

Summary
The Heliospheric Division of GFSC has developed a compact ion and neutral mass spectrometer (INMS) for in situ measurements of ions and neutral H, He, N, O, CO2 with mass M ≈ 0.5 at an incoming energy range of 0-200 eV. The INMS is based on front end optics, post acceleration, gated time of flight, ESA and CEM or MOP detectors. The compact sensor has a dual symmetric configuration with the ion and neutral sensor heads on opposite sides and with full electronics in the middle. The neutral front end optics includes thermionic emission ionization and ion blocking grids, and the ion front end optics includes appropriate compensation grids. The electronics include front end, fast gating, HPFS, ionizer, TOF binner and full digital CACH digital electronics. The data package includes 400 mass bins each for ions and neutrals and key housekeeping data for instrument health and calibration. The data sampling can be commended as fast as 10 mas per beam (corresponding to ~80 km spatial separation) in burst mode, and has significant onboard storage capability and data compression scheme. Experimental data from instrument testing with both ions and neutrals will be presented. INMS was recently launched on The ExoCube 3U CubeSat mission (SMAP launch) on January 31, 2015. A second upgraded INMS is scheduled to be delivered August 2015 to Dellingr E. INMS mission to be launched in 2016. This miniature instrument fits in a 1.5U volume, weighs only 569 g and requires nominal power of 1.6W.

Compact CubeSat – INMS Measurements
Measurements of atmospheric neutral and ion composition and density are needed not only for studies of the dynamic ionosphere-thermosphere-mesosphere system but simply to define the steady state background atmospheric conditions. Remote sensing measurements of atomic oxygen density at altitudes between 80-95 km have shown that the density can vary by over an order of magnitude. This causes deviations from the densities estimated by MSIS (a well known empirical model of Earth’s atmosphere) by up to a factor of ten. CubeSats provide an ideal platform for an in-orbit mass spectrometer capable of obtaining the in situ measurements that are critical to understanding this complicated system.

Measurement Objectives
- high-resolution (m/z) at
  - H, He, N, O, [CO2]
  - H, He, N, [N2], [NO], [CO2], [CO]

Optimizing Science Performance for the Exosphere
The first-ever empirical estimation of global atomic hydrogen density in the thermosphere and exosphere from 60 km to 120 km was achieved with remote measurements of stratospheric airglow emissions. E. The upcoming NSF EXOCEBE mission will provide the first ever in situ measurements of ion and neutral densities, including [H], [He], 200 ppm, and [O] for the entire range of the thermosphere and exosphere.

Instrument Specifications
- Separate apertures for ions and neutrals ~20deg x ~10deg around rim
- Thermionic ionization of neutrals
- Mass resolution MiM -12, Mass dynamic range 1-40 amu
- Mass counting rate 1 Meg-ops
- Auxiliary gate pulse width serves as crude mass filter to select full mass scale or exclude heavy elements with short pulses.
- Spectra sampling 100 ms to 10 sec programmable with 10 ms steps
- Onboard memory and processing capability
- Data product: Raw TOF spectra up to 400 bins for mass window of interval, and species counters
- Electrical Interface: 4% <3.3V, +5V and SPI serial communication
- Volume 8 cm x 13 cm (fits in 1.5U), mass 560 g
- Peak power at full filament 1.6W, ions only 0.6W

ExoCube and Dellingr Missions

The ExoCube mission (PI John Noto, Scientific Solutions)
- Designed to acquire global knowledge of in-situ densities of [H], [He], [O] and [N] in the upper ionosphere and lower exosphere in combination with incoherent scatter radar ground stations distributed in the northern polar region.
- California Polytechnic State University (Cal Poly) University built 3U CubeSat bus
- ExoCube-X SMAP Delta II launch January 31, 2015
- 6-12 month operation
- 468674m Orbit altitude, 98 degree inclination

The Dellingr mission (NASA Goddard Space Flight Center)
- Goddard’s internal development to design, build, test and fly a 4U CubeSat carrying 2 GFSC science instruments (Science Magnetometer and Ion Neutral Mass Specrometer)
- A3 stabilized GNC system
- ISS Launch possibility 2016
- Thermally tested, high capability s/c bus

Principles of Operation
- Neutral particles are first ionized with a compact thermionic filament. Ions are blocked from the neutral aperture by a retarding potential grid
- The ions are directly focused into the gate from pre-acceleration
- Pre-acceleration by voltage V gives all ions same energy E = qV much greater than initial energy dispersions dE
- Ions are ordered in velocity according to their mass on the basis of the simple formula E = m
- Measuring the velocity of each ion - with time of flight over a distance d gives the mass of the ion according to E = 1/2 mvd2
- Accelerated ions are focused through an electric gate into an electrostatic analyzer (ESA)
- Ions are normally blocked by the gate and can pass through only during a short pulse duration dt, marking a start in the time of flight measurement at the pulse edge
- Ions are detected at the output of the ESA by a CEM detector marking the stops for the time of flight measurements
- The ESA is turned to the proper energy pass band set by the pre acceleration voltage blocking out of band particles, as well as attenuating any CEM
- The mass resolution is limited by uncertainties in energy dispersion, time resolution and time of flight path

Spectral measurement of ambient gas composition using gate pulse width of 80 ns (green line) and 20 ns (red solid). A shorter gate pulse will attenuate the flux of heavier species through the gate.

ExoCube Instrument Operations
- ExoCube launched with SMAP on January 31, 2015. Functionality testing shows that the instrument is in good health.
