Ka-band Technologies for Small Spacecraft
Communications via Relays and Direct Data Downlink
Outline

• Objectives
• Ka-band background
• Software defined radios
• Ka-band antennas
• Potential data return in Ka-band
• Summary
Ka-band Communications

OBJECTIVES
Objectives

- Develop affordable technologies to ease transition into Ka-band for significantly higher data rates with minimal impact on near Earth missions
  - Ka-band/multi-band *software defined radios (SDRs)* and standards for a range of space missions
  - *Portable waveforms* for SDRs to reduce cost of development and increase flexibility
  - *Electronically steered high gain antennas* to increase data return and eliminate mechanisms and vibration
  - Leverage *large and small business and university* capabilities to address unique needs of small spacecraft
NASA Ka-band Communications Infrastructure

KA-BAND BACKGROUND
• NASA’s Tracking and Data Relay Satellite (TDRS)
  – Three generations of spacecraft provide high bandwidth, low latency communications to multiple simultaneous mission spacecraft
  – S-band, Ku-band, and Ka-band Single Access (KaSA) and S-band Multiple Access services

• KaSA Service via large steerable antennas in auto-track mode
  – Return (from spacecraft) of mission data and spacecraft telemetry; \(G/T: 26.5\, \text{dB/K}\); 25.25-27.5 GHz
  – Forward (toward) command and control EIRP: 63.0 dBW; 22.55-23.55 GHz
  – Field of View ± 76.8° E-W; ± 30.5° N-S
NASA Near Earth Network (NEN)

Ka-band Tracking Terminal Examples

- **WS-1**
  - White Sand Complex
  - 18 m
  - S-, X- and Ka-bands
  - Ka-band $G/T$ of 46 dB/k

- **AS-3**
  - Alaska Satellite Facility
  - 11 m
  - S- and X-bands operational
  - Provisions for Ka-band capability in ~2020
  - Expected Ka-band $G/T$ of 40 dB/k
Commercial Ka-band Tracking Terminal Example

- Comtech TCS 2.4m X/Y Tracking Terminal
  - Eliminates “keyhole” when spacecraft is overhead
- Ka-band operation
  - 25.5 to 27.0 GHz
  - G/T of 27 dB/K

SOFTWARE DEFINED RADIOS

STRS and Ka-band SDRs

- Enables independence of applications from software defined radio platform/hardware
- Reduces effort to develop, port and share applications waveforms and documentation via repository
- Applicable to all categories of spacecraft from large platforms to SmallSats and CubeSats
- Multiple vendors have STRS compliant SDRs or platforms in their product line
- Others under development via partners and NASA SBIR/STTR Program

See [https://strs.grc.nasa.gov/](https://strs.grc.nasa.gov/)
SDRs offer economies-of-scale via common hardware, tailored to mission needs via STRS-compliant software.

**JPL/L-3 CE**
- S-band SDR; 6 MHz channel
- 10 Mbps Class
- L-band receive (GPS)
- Virtex II, Sparc Processor, RTEMs

**Harris**
- Ka-band SDR; 225 MHz
- >500 Mbps Class
- Virtex IV, PowerPC Proc, DSP (1 GFLOP), VxWorks
- STRS adopted for use in Harris AppSTAR™ software-defined payload architecture

**General Dynamics**
- S-band SDR; 6 MHz channel
- 10 Mbps Class
- Virtex II, ColdFire Processor (60 MIPS), VxWorks, CRAM (Chalcogenide RAM) Memory

SCaN Testbed on ISSs is flying multiple STRS-Compliant SDRs from 3 Vendors.
SBIR/STTR Contracts for STRS-Compliant SDR Technologies

• SBIR-14 Commercialization Readiness Program
  – Software Defined Near Earth Space Transceiver (SD-NEST) [Space Micro]

• STTR-15 Phase I

• SBIR-16 Phase I Selections
  – OpenSWIFT-SDR for STRS [Tethers Unlimited]
  – Plug-In Architecture for Software-Defined Radios [Blue Sun]

• [Earlier SBIR SDR Contracts non-STRS Compliant]
  – https://www.nasa.gov/sites/default/files/files/SBIR_SDR.pdf

✓ Watch for the 2017 SBIR/STTR call for proposals in November 2016
Software-Defined Near Earth Space Transceiver (SD-NEST)

- **μSTDN-100 S-band Transceiver**
  - NASA IRIS, LADEE Missions

- **μXTx-100 / 200 X-Band Transmitter**
  - NASA IRIS Mission

- **μKaTx-300 Ka-band Transmitter**
  - NASA TESS Mission

- **X/Ka Wideband Receivers**
  - (New Development)

- **Proton 400k Rad-Hard Processor**
  - NASA MISSE-X Mission

- **STRS Waveforms (From Legacy Repository)**
Software-Defined Near Earth Space Transceiver (SD-NEST)

- **Frequency agile, multi-band transceiver**
  - Narrowband TT&C over any frequency S-, X- or Ka-bands
  - Wideband data return and forward over X-band (375 MHz) or Ka-band (>650 MHz)

- **Flexible waveform processing**
  - Low-power mode for TT&C alone
  - High-performance mode for high-rate mission data return (>1.2 Gbps)

- **STRS Operating Environment**
  - General-purpose processor available (e.g. P400K) for high-level control algorithms

- Engineering Model Completion in FY17
- Seeking partners for contract option (with cost sharing) for proto-flight model
Alternatives to Mechanically Deployed or Steered Antennas

KA-BAND ANTENNAS
Mechanically Steered High Gain Antenna Examples

**SCaN Testbed Ka-band and S-band Antenna Positioning System (APS)**

- **Surrey Satellite X-band (COTS) and Ka-band (Under development) Antenna Pointing Mechanisms (APM)**

GRC 3-D Printed Ka-band Faceted Dome Array – Concept and Prototype

- 36 Elements (16 at 30°, 16 at 15°, 4 at 0°)
- ~90 degree field of regard (~30° beamwidth)
- Probe Fed Elements 14.4 dBi, 256 MHz BW
SBIR/STTR SmallSat Antenna Technologies
Examples

• STTR-14 Phase II
  – Fully Printed Flexible 4x4 Element Graphene-Based Phased Array Antenna; [Omega Optics/U. Texas Austin]

• STTR-16 Phase I Selection
  – Deployable Ka-band Reflect Array Antenna; [Tyvak Nano-Satellite Systems/UCLA]

• SBIR-16 Phase I Selection
  – Space Environment Design and Testing; [Kymeta Government Solutions, Seattle, WA]

✔ Watch for the 2017 SBIR/STTR call for proposals in November 2016
Graphene Based, Flexible, Fully-Printed 2D-Scanning Phased Array – Omega Optics and Texas State University

• **Goal**
  – Develop a flexible ink-jet printed Graphene-based 4-bit 4x4 phased array antenna (PAA) at S-band

• **Development Approach**
  – Grow Graphene nano-flakes via CVD and incorporate into Graphene ink
  – Print multi-layer integrated circuits and interconnections on flexible substrates
  – Print Rx/Rx modules from Graphene transistors, phase shifters and amplifiers
  – Test a prototype printed PAA

• **Applications**
  – CubeSat and SmallSat antennas
  – Large deployable phased array antennas
  – Reconfigurable, deployable, conformal, and/or wearable active antennas

![Graphene flakes](image1)
![Inkjet printed transistor](image2)
![Multilayer interconnect](image3)
![Printed Graphene PAA](image4)
CubeSat Antenna
- Frequency: Optimized for 27.0 GHz
- Gain: ~24 dBiC over scan volume
- Electronically steerable; ± 45° range
- Power: <5W

**Maturity**
- Designed, built, tested, delivered
- Next steps: Modifications for space (SBIR Phase I), flight qualification testing and demonstration mission

SmallSat Antenna
- Simultaneous transmit and receive out of same aperture for X, Ku, and Ka bands
- Capability at Q, V and W bands
- Technology creates potential for economical 6U, 12U, and larger form factors

**Maturity**
- Initial design target sets identified
- Early modeling and simulation complete
- Seeking a development partner to fund detailed design, build, and test
Current NASA Activities with Kymeta Meta-material Phased Array

**KGS SBIR Phase I (GSFC)**

- Seeks to space qualify CubeSat antenna
  - Define requirements
  - Hardware redesign
  - Antenna redesign
  - Thermal characterization

- All of which seek to make the SmallSat antenna space flight-qualifiable

**Cubesat Antenna Measurements (GRC)**

- Seeks to characterize the metamaterial-based technology beyond its design parameters gain insight into what it can do
  - Leverage antenna measurement systems and talent at GRC to obtain high quality pattern, polarization, power, and steering measurements.
  - Compare against other Ka-band antenna technologies for potential for use on CubeSat and SmallSat missions.
Boeing 256-Element Ka-Band Transmit Phased Array Antenna for GRC and ONR

Array Number of Elements: 256 Elements
Band: 25.5-27.5 GHz; > 1 GHz Bandwidth
Beam width: Nominal 5 degrees at -3dB
Gain (CP): 28 dBi
EIRP: Peak 36.5 dBW; 33 dBW@ 60 Degrees
Array Total DC Power: 90 Watts (per beam)
Dimensions: 19 cm x 10.2 cm x 6.5 cm
Mass: 1.8 kg

Limitations:
• Lab model over 10 year old design; many components obsolete
• Rad-hard Triquint GaAs MMIC design kit and foundry process retired
• “Brick” design is more expensive to manufacture than “tile” approach
Scalable Ka-band Active Phased Array Antenna (PAA) Design

- Space qualifiable tile PAA design
  - Based on Boeing Wideband Communication and RF Systems Group airborne product line
  - Tile packaging significantly reduces costs and offers higher efficiency than brick design
  - SiGe 0.15 um process; rad-hard by design MMICs to 300 krad (Si)

- Ka-band: 25.25 to 27.5 GHz
  - Right-or left-hand circular polarized

- Wide field of regard: ± 70°
  - LEO mission to GEO relay or direct to ground

- Easily scalable implementation
  - Select 64, 128 or 256 elements for EIRP of 24-, 30- or 36-dBW respectively
  - Range of user needs, budgets, SWaP constraints

- Potential for data rates up to 3.2 Gbps
  - Performance with DVB-S2 MODCOD to be validated
Boeing Ka-band Tile Array for SmallSats

- 25.5-27.0 GHz
- ± 70 degree FOR
- 24-, 30- or 36 dBW
- 22.9 cm x 17.8 cm x 9.6 cm
- 1.8 kg
- <150 W depending on # elements and drive level
- Rad-hard by design
- 8 year design life

Ka-band PAA Shown on Boeing 502M SmallSat Bus

✓ 10s to 100s Mbps data rates in affordable, modular PAA packages optimized for SmallSat missions
✓ Available with integrated beam controller, power supply and thermal management
Comparisons Via GEO Relay and Direct to Ground (DTG)

- 1000 km, 98.5° mission, max ranges 38000 km, 2800 km, DVB-S2 MODCOD
- SmallSat DTG data rate ~70x higher than via TDRS; **38 Gb/10 minute pass**
- Large mission DTG data rate ~235x higher than via TDRS; **2Tb/10 minute pass**
Summary and Co-Authors and Contributors

CLOSING COMMENTS
Summary

• Affordable Ka-band communications technologies will enable a new generation of science and exploration missions through increased data return
  – Mission data return rates from 10s of Mbps to Gbps are feasible for range of small and large satellites

• NASA is working with industry and SBIR/STTR program to:
  – Develop STRS-compliant waveforms
  – Advance the technology readiness level of Ka-band SDRs
  – Develop and demonstrate Ka-band space-qualifiable electronically steered antennas
