

#### **Supplementary File 4. Jaccard Correlation Coefficient Histograms by Site**

Histograms of Jaccard Correlation coefficients for each site in the Intermountain West study area. Histograms include pairwise comparisons within and between the identified site. An additional companion histogram showing location of Jaccard Correlation coefficient cutoff at values greater than the 0.8975 cutoff is also included. See Figure C4 for histogram containing all pairwise comparisons. Histogram on the left is coded by cytotype pairs, i.e. both samples in the pair are diploid (2x) cyotype, both samples in the pair are triploid (3x) cytotype, and samples pairs that contain one of each diploid and triploid (2x & 3x) sample types.
